A

MISSION TO THE MYSORE;

WITH

Scenes and Facts

ILLUSTRATIVE OF

INDIA, ITS PEOPLE, AND ITS RELIGION.

BY THE

REV. WILLIAM ARTHUR,

WESLEYAN MINISTER.

SECOND THOUSAND.

LONDON:

PARTRIDGE AND OAKEY, PATERNOSTER ROW;

AND 70, EDGWARE ROAD (HANBURY AND CO., AGENTS);

AND SOLD BY J. MASON, CITY ROAD, AND PATERNOSTER ROW.

1850.

MEADEN, PRINTER,
CURSITOR STREET, CHANCERY LANE.

TO

JOHN POYNDER, ESQUIRE,

WHOSE

ABLE AND SUSTAINED EXERTIONS,

On behalf of India,

HAVE, BY THE BLESSING OF GOD,

ENCOURAGED EVERY LABOURER FOR HER ENLIGHTENMENT,

REMOVED

DISHONOURS FROM THE BRITISH NAME,

AND FACILITATED

THE REGENERATION OF A GREAT CONTINENT;

THIS VOLUME

IS MOST RESPECTFULLY INSCRIBED.

PREFACE.

The following pages, prepared with the hope of contributing, in some humble way, toward circulating information with regard to India, and promoting an interest in its welfare, were communicated to the Wesleyan Methodist Magazine. Hundreds of persons who read them in that periodical have requested that they should be separately published, and a respectable New York journal has deemed them worthy of reproduction. To these encouragements, and not to any previous resolution, is due their appearance in the present form.

The reader should be apprized that, as the views of Hindu mind and manners he will here find, were formed through familiar intercourse with the people of a district remote from any European station, they will probably differ, in some points, from those of writers who have resided only in the Presidencies or other centres of English influence. It should also be remembered that India

is so vast a region, that a trait prominent in the character of one Hindu nation, may be faint, or even undiscoverable, in another.

In extenuation of defects beyond those incident to a first attempt at authorship, all the usual pleas might be urged, with more than usual truth. But apologies would neither enrich the matter nor improve the style; and where neglect may reasonably be apprehended, it would be gratuitous to raise a shield against criticism. With whatever success, the Writer has desired, throughout, to avoid equally the extreme of those who from a culpable prejudice exaggerate every blemish of Hindu society, overlooking every grace, and the more tempting extreme of those who from a generous prejudice exaggerate every grace, overlooking every blemish. To give fair representations, and to promote good ends, has been honestly meant, and the attempt is humbly commended to the blessing of God.

CONTENTS.

CHAPTER I.

THE VOYAGE.

Dedication—The Embarkation—The Ship and the Company—The Sabbath Bell—The Congregation—Madeira—The Burial—The Whale—The Tropical Sky—The Tropical Night—Stars and Anthems—The French Frigate—The Procession—The Razor—The Douche Bath—Pleasure and Progress—Studies and Tossings—Motives—Sport—The Gale—The Height of the Storm—The Lesson—Ease and Money—The Calm—The Shark—The Sight of Land—The Coast of India—Masts and Spires . . . . . Pages 1—30

CHAPTER II.

MADRAS.

The Scene and the Songster—Our Visitor—A Catamaran—Portrait of a Native—Native Penetration—Farewell to the Ship—The Surf—Blacktown—Hindu Women—A Singularity in Cleanliness—A City given to Idolatry—Hospitality—The first Prayer—The Snake Charmers—The sacred Serpent—The Prayer Meeting—A Palankeen—The Crowd—The Torture—The best Calling—Munro—The Mount Road—Eastern Landscape—The Mount—St. Thomas—The lost found—Brotherly Love—The Inquisition astonished—Mission Churches—The olden Time—The present Time—The Charter—Early Struggles—The Siege—The Capture—Lally's Fall—Heats—Monsoon—Sea and Land Breeze—Providence in Climates . . . . . pp. 31—76

CHAPTER III.

THE JOURNEY "UP COUNTRY."

Bearers and Coolies—Bungalows—Bad Taste—The Landscape—Beauty and Sadness—Convict Gangs—Crime and Punishment—The Breakdown—The Storm—Cauvery-Pauk—Astronomy—Geography—Inspiration—Difference of Opinion—Tanks—Irrigation—Virtues of Water—Theory of the Heart—Wallajanuggur—Arcot—The young Nabob—The daring Clerk—The Siege—The Onslaught—The Triumph—The Lesson—Hydur and Coote—The Village Carnage—The Revenge—Imputations—Refutations—An Alternative—Missionary Views—Native Jealousy—A Discovery—A Sermon once for all—The Ascent of the Ghauts—The Ghauts—The Plateau—The Glory of Nature—The Shame of Man—The Adaptations of Providence—Diverse Tongues—A bountiful Alphabet—An unfair Description—A great Boon—A clerical Goth—Leisurely Labours—Chunam—Hydur—His Rule—His End—Sights by the Way—Families en Route—Pensive Retrospect—The Arrival . . . . pp. 77—140

CHAPTER IV.

BANGALORE.

The first Sight—Martial appearances—Tamul Towns—The Metropolis of Monkeys—The wonderful Ape—The Sun in Captivity—All Life is the same—Gods many—The Pettah—The Bazaar—Bankers, Drapers, Grocers, &c.—Wares—The Welcome—Our Brethren—Labours and Fruits—The three Tongues—Piety among the English—The Tamul Work—The tried Converts—The Canarese Work—The sunrise Service—The outdoor Audience—The Orphan School—The Native Book—The Boy and the Book—A strange Christian—My Moonshi—History of Bangalore—Improved Muster Roll—Corruptions—The Revolution—A good Change—Plainness and Dignity—The open Door . . pp. 141—179

CHAPTER V.

MY CIRCUIT.

The pleasant Peep—The Photograph—The Droogs—The Mission House—The Landscape—A noble Banyan—Mr. Hod-

son's Tour—The useful Umbrella—Goobbee and its People—Forts and Towns—The Out-castes—Mendicant Monks—Female Finery—Youthful Widows—Native Schools—The Temple—Nunjangood—Goobbee Appa—Apotheosis—The Miracle—The daily Sacrifice—Temple Service—The Parashé—Goobbee Appa's Lameness—The Female Procession—The Muntapa—The holy Water—The Moment of Joy—Successive Processions—Simple Furniture—A strange God—Yellama—The Honours of the Ox—Bala Rama—The Lord of Devils—The God "Collector"—Honour to Implements—The sacred Vulture—The Snake Temple—Death of a Deity—The Cobra—The Earth adored—Sacrifices to the Earth—Domestic difficulties of the Sun—The Moon, the Sea, and the Wind—Sacred Trees—A dark Soul—Our Villages—The lonely Tomb—Coongull—The Bigot-maker—Population of our Circuit—A wide Field waste—Touching Contrasts—Opportunity, Piety, and Hope . . . . . pp. 180—241

CHAPTER VI.

OUR WORK.

Interpreters—Written Sermons—Standard of Attainment—Copia Verborum—Studies—Ryot Dialect—Writing and Speaking—Native Politeness—Value of a good Pronunciation—No Impossibilities—Progress and Pleasure—First Service—The Sabbath-day Market—The Market-place Prayer—The Temple Door—Necessity for an Idol—Air and Water—A Queer Bath—A Clean Thing brought out of an Unclean—Gods many—The luckless Priest—An amiable Bramhan—Logic—Suspicions—An Enquirer—The sad Resolve—An Inconsistency on my part—Village Preaching—Ryot objections—Sense of Guilt—Have they a Conscience?—Plain Words needful—Emotion in an Audience—The forsaken Shrine—The Feast unheeded—Busy Hearers—A lonely but happy Prayer—A Pilgrim and a Father—Biddiri—The Market Stalls—Books and Bindings—Chayloor—Purity of Heart—Christ the Purifier—The best Beginning—The Pundit Improvisatore—A bold Attack—A warm Engagement—The Shastri—The open Door—A pleasant Wrangler—An attentive Audience—The Feast of Yettanhully—The votive Fire—The Men who had a Vow—The Expostulation—Our Schools—Bibles and Tracts—The first Book seen, and its Fault—Our Joys—The Future—The Banyan of human Society—Prospects . . . . . pp. 242—316

CHAPTER VII.

INDIA: WHAT IS IT?

Physical Outlines—Partly Tropical, partly Temperate—Its Productions—Its early Trade—Course and Effects of the Trade—Its Influence on our Marine—On our Trade—On our social Life—Arithmetic—Its ancient Science—Its Influence in Religion—Teaching Egypt—Converting China—Our Conquest—Its Results—Where lies the World?—The loud Call . . . . . pp. 317—342

CHAPTER VIII.

INDIA: ITS PEOPLE.

Person and Address—Gifts and Justice—Lofty Titles—Bare Walls—Large Families—Seclusion—How to Eat—Grace after Meat—Animal Food—Temperance—Table Delights—Simple Furniture—Treatment of Women—The Wife's God—How to treat a Wife—Female Ignorance—Female Employments—Has Woman a Soul?—A Domestic Evil—Brighter Prospects—Domestic Occurrences—Prayer to the Dead—Parental Obedience—Honours of Marriage—Qualifications of a Wife—Marriage Months—A short Pilgrimage—Marriage Ceremonies—Early Marriages—Hindu Widows—Funeral Ceremonies—Villages and Towns—Village Government—Revenues—Despotic Governments—Caste—Old Houses—Caste Duties—The Bramhans—Bramhanical Dignity—Bramhan Attainments—Poetry—Lucky Days—Ignorance—Absurd Notions—A pitiable Country—A Fable—What England is—Mental Condition—The King Caste—Arrian and Ferishta—Hindu Bravery—Sepoy Courage—Merchants' Caste—Commerce—Shudras—Agricultural Usages—Irrigation—Cattle keeping—Art of Clothing—Building—Mechanics—Fine Arts—Loss of Caste—Pariahs—Out-castes—Misery—Ameliorations—The Lumbardi—Savages—Mountain Clans—Morality—Truth—Honesty—Robbers—The Thugs—Hindu Benevolence—Cruelty—Apathy—Temper—Different Opinions—Civilization—Practical Use . . . . . pp. 343—484

CHAPTER IX.

INDIA: ITS RELIGION.

No regular System—The four Vedas—Their Age—Where written—Character of the Vedas—Bacchanalianism—Absurdities—Shastras and Purânas—Doctrines—Extracts from the Vedas—The Veda on the Clouds—The Veda on the Sun—The Veda on Water and Fire—The Veda on Moon-plant Wine—The Veda on the Wind—The Dawn—Pairs and Trios of Gods—Sacred Vulture—Pantheism—Para Bramha—The Triad—The Avatâras—Krishna—The Preserver a Deceiver—The Destroyer—Modes of making Gods—Idolatry—Pollution of Divinities—God one, Gods many—Confused Ideas—The Soul divine—All Life one—Heaven and Hell—Caste Heavens—Rites for the Dead—Effects of Metempsychosis—The Fall—Pardon—Meditation—Penances—Self-tortures—Ablution—Methods of Salvation—Purification—The Way to Mercy—Morality—Principles and Perversions—The Priesthood—Sacerdotal Life—Ceremonial Purity—Stages of Priestly Life—Different Orders of Priests—The Guru—His Splendour—His Power—Zeal and Influence of the Priests—Men better than Gods—Ritual—Daily Sacrifice—Various Oblations—Prayers—The Gayatri—Prayers from the Veda—The sacred Omkara—Rites for all Ages—Extreme Unction—Transubstantiation—Temple Service—Karli—Sects—Foes—Romish Missions—Carey—The Danish Flag—Symptoms—Changes—Decay of Hinduism—Progress of Christianity—Agencies—Successes—A great Opening—Liberality of Converts—Will Christianity prevail? . . . . pp. 435—526

CHAPTER X.

THE RETURN.

Deaths—Parting—Our Ship and our Party—Combats—Faults and Misfortunes—Marine Theology—The Night of Vigil—The Day of Burials—Begging Bread—Professional Consolation—Making Land—Mistake—The African Coast—Doubts and Peerings—The Evening Bell—Wynberg—African Omnibus—Cape Town—Lifting Anchor—Perils and Resolutions—Help in Time of Need—Short Commons—Owners and Men—Large Leakage—The Denial and the Promise—The last Shot of the Locker—Hesitation—Providential Escape—The Change of Ship—The desired Haven . pp. 527—560

CHAPTER I.

THE VOYAGE.

Dedication—The Embarkation—The Ship and the Company—The Sabbath Bell—The Congregation—Madeira—The Burial—The Whale—The Tropical Sky—The Tropical Night—Stars and Anthems—The French Frigate—The Procession—The Razor—The Douche Bath—Pleasure and Progress—Studies and Tossings—Motives—Sport—The Gale—The Height of the Storm—The Lesson—Ease and Money—The Calm—The Shark—The Sight of Land—The Coast of India—Masts and Spires.

On the afternoon of Sunday, April 14th, 1839, the "holy and beautiful house," at City-road, was thronged with a devout multitude, met for the purpose of commending to the Lord of the harvest, four labourers for his field in the East. It was the Centenary year; and the Rev. Thomas Jackson, then President of the Conference, who conducted the service, diffused through it the influence of that special unction, wherewith the Head of the church had endowed him, for the duties of that memorable time: this, with Dr. Hannah's touching and appropriate counsels, the mighty supplications of Dr. Bunting, the fervent response of that Christian assembly, and the emotions raised by the surrender of

every early endearment, and the entrance on untold responsibilities, conspired to make it an hour never to be forgotten by the departing Missionaries. Often since, when ministering in the same sanctuary, have I longed to recall the very feelings of that day of dedication.

The following morning, in company with Messrs. Squarebridge, Garrett, and Pope, I embarked at Gravesend on the "Essex," Captain Foord, bound for Madras. The secretaries of the Missionary Society had accompanied us on board; where, assembling in one of our cabins, Mr. Hoole and Dr. Bunting earnestly implored, on our voyage and Mission, the blessing of that God in whose name we were going forth. The latter then addressed us in a few sentences of counsel, blending an indescribable fatherliness with his characteristic wisdom. The thoughts of the moment made our hearts tender; and the impression of those last kind words was deep and enduring. They then took their leave: my eye followed them till no longer discernible, and then turned to the Friend who "forsaketh never."

Time was when a voyage to the East commanded some such interest as will await the journal of Mr. Green's first aërial voyage across the Atlantic; but, living in less favoured days, we must be content to proceed on our way accompanied only by such as may be attracted by sympathy with our object, or who will deign to fill up a vacant hour by listening to our tale. We found the "Essex," a fine new ship of nearly eight hundred tons, well officered, manned and provisioned. There were about fifteen passengers, for whom the accommodations were good, and the fare sumptuous. About one hundred and fifty recruits for the service of

the East India Company occupied one apartment between decks, their hammocks being suspended by cords of different lengths, so as to form tiers one above another; thus they slept, and that they managed to exist in the warm weather of the tropics was wonderful. In all other respects they were well provided for. The spacious poop, being free from hencoops, which usually encumber that locality, served the passengers for an agreeable promenade. At the bow was a similar erection, called by the sailors "a top-gallant forecastle," under which a multitude of geese, ducks, fowls, and guinea-fowls were packed into coops "as closely as bottles in a rack;" here also a cow and calf had a comfortable berth. In the space between the fore and main masts stood the capacious long-boat, serving, for the time, as a sheep-fold, while underneath it a number of pigs were closely penned. Everything gave indication of plenty; and, on a long voyage, there is not a more welcome shipmate.

A foul wind prevailing for some days, we were detained off Deal in company with a numerous fleet, which, weighing anchor simultaneously, gave us the gratification to see our own vessel outsail all the others, the last being one of the American line of packets, which had a considerable advantage in starting. This triumph completely established the "Essex," not only in the confidence, but in the affections, of her crew. For it is just as impossible for a sailor not to invest his ship with personal attributes, as it is to traverse a noble picture-gallery, and not forget that those eloquent groups, which stir in turn every feeling of your nature, are themselves devoid of emotion as the air

around them. Basil Hall tells us, that the men of the "Leander" were in the habit of saying, the old ship "could do anything but speak;" and I well remember with what emphasis our boatswain exclaimed, after we had cast anchor in Madras Roads, "She has done beautiful." Thus, too often, our seamen, when brought to "their desired haven," praise their ship, and forget their God.

During our first Sabbath at sea, we were "beating down Channel" in a thick fog, which so occupied all hands as to prevent an assembly for public worship: but we had service twice in one of our own cabins. On the second, the Atlantic was tossing us on its majestic waves, in such a way as to render a deck-service impossible, and accordingly we assembled in the cuddy. On the third, we were sailing before a mild breeze, with the sea smooth and the sky bright; so orders were issued that all should "prepare for church." A few minutes before the time, the ship's bell commenced to ring exactly like the "church-going bell" of a village Sabbath. This was unexpected, and brought crowding before the mind many a memory of the past, and with them those emotions which only they can know who have proved the susceptibilities awakened in the heart by long distance from all who are dear, added to the uncertainty of re-union. Above, we found the larboard quarter-deck occupied by the seamen sitting on temporary benches, and presenting in their beautifully clean clothes a pleasing contrast to their ordinary appearance: on the opposite side stood the soldiers, rank and file, each man furnished with a Bible and Prayer-book: the officers and passengers were seated upon chairs. The

capstan was the pulpit, the British ensign its drapery. A congregation so picturesque I have never seen, and seldom one more attentive. These services were continued every Sunday throughout the voyage; on deck, when the weather permitted; and when too boisterous, in the cuddy; each of the Missionaries officiating in turn. Our opportunities of doing good among the soldiers were restricted to visiting the sick, and conversing with those whose attention we could engage on such occasions. We found amongst them two or three who had known something of the grace of God, whom we brought to our weekly class-meetings, and, when practicable, to our morning and evening prayer. Christian fellowship is always sweet; but it was doubly so when, far from sanctuaries, we weekly met on the deep to recount the mercies of our God, and to look forward with prayerful hope to the toils which lay before us. Beside our regular class-meetings and "family prayer," as we called it, we two or three times joined with a few who were devout in commemorating the Saviour's death.

After having struggled to the mouth of the Channel, we were favoured with a fair breeze, which never failed till it had carried us within the influence of the north-east trade-wind. The Bay of Biscay gave us a vigorous tossing, which caused abundance of sea-sickness, and ludicrous accidents at the dinner-table. In six days after clearing the Channel, Madeira came in view, at the distance of about twenty miles; reminding me in its appearance of Clare Island, as it stretches across the mouth of the incomparable Clew-Bay, sheltering its hundreds of islets from the ocean, as of yore it screened

the armaments of Granua Uile from her Saxon foes. From this point the climate perceptibly changed, the breeze became balmy, the sky cloudless, the sun fervid. Shoals of porpoises occasionally gambolled round the ship, seeming to take delight in racing with the gigantic intruder on their home. It is hard to find a more vivacious exhibition than they display, as they dart along the side, round the stern, before the bows, now under their comrades, now over their backs; as intent on progress and sport at the same time, as the children of a village school just let loose for dinner. Occasionally, also, we saw the interesting little nautilus spreading its graceful sail, as confident in the care of Him who "holdeth the winds in his fist," as if that sail propelled a fleet, on which the hopes of a nation were attent. Our wake was often followed by the symmetrical and many-hued dolphin, some of which were made to increase the variety of our cuddy table. As we advanced, shoals of flying fish were seen to rise upon the wing, and, after a brief airing, return to their native tide. It seemed very plain that they took flight, not from any danger, but from the impulse given by the Creator to all his works, to develope every power with which they are endowed.

While sailing in this beautiful region, a soldier became dangerously ill. To afford him more air he was carried on deck, where it formed a strange contrast to the ordinary gloom of a sick chamber, to see the bright sunbeams dancing not only on every object round the poor invalid, but on the very features which death was blanching. He had been a man of good character, much respected among his comrades, and manifested

deep feeling when spoken to on his religious state. His prayers for mercy were fervent and touching; and, offering those prayers, he died. This called us to witness that scene which is always described as so melancholy,—a funeral at sea. It is certainly affecting, affecting from its own solemnity, and perhaps still more so from the contrast it presents to all you have been wont to witness. You have death without any of those attendant forms with which it seems so naturally to harmonize. There is no sable bier; no dark train moving slowly on a sad errand; no passing from common ground within the hallowed enclosure consecrated to the memory of the dead, to the hope of the resurrection; no grave before you yawning for its prey; none of the objects in which the eye usually recognises Death. All his retinue is wanting; but himself is there, and his presence is the more startling because of the every-day and life-like character of surrounding appearances. The body, wrapped in the hammock it had been wont to occupy, was carried to the side of the ship, and laid on a plank so placed as to incline toward the water. Around this thronged a numerous group, every countenance wearing the impress of thought and tenderness. During the reading of the solemn service, the reckless look of the young recruit gave way to one of deep emotion; the hardy visage of the seaman relaxed, and his eye swam; every spectator shared and manifested that "undefined and sudden thrill" which the nearness of death does not fail to inspire. The words, "We therefore commit his body," were not followed by the usual thrice repeated hollow sound which rises from the grave as the decree of separation

between the living and the dead; but at those words the inner end of the plank, on which rested the corpse, being raised, it glided slowly into the deep blue wave that was heaving below.

> "One sullen plunge, and the scene is o'er;
> The sea rolls on, as it rolled before."

In the case of another man, and also of a soldier's child, this sad ceremony was twice repeated during the voyage, with the same circumstances, except that in the last-named instance the melancholy silence usually following the "sullen plunge" was broken by a mother's grief.

We were now fairly in the tropics. The weather had become extremely hot, but an awning pleasantly shaded the poop; here the passengers were usually to be found, either in study or promenade; these occupations being sometimes varied by a game of leap-frog or a lusty romp. One day, while stretched on the deck reading, the man at the wheel cried out, "A school o' whales." Having never seen a whale, I started up in great haste, but, placing my foot on a round stick, left there by the sail maker, came down again with greater, receiving such an impression on the protuberant joints of one side, as served to remind me of my first sight of a whale for a week after. The "school" (shoal) proved to consist of several grampuses, and one immense whale, which the sailors averred was as long as the ship; but that being about one hundred and forty feet, seemed rather improbable. We saw him fill and blow several times; which operation very much resembles the first puffs of steam from a locomotive engine just starting.

The marine scenery of the tropics exceeded in

splendour and variety all my anticipations. During the day the sky formed a superb dome of stainless and polished azure; while, lighted from above by its one magnificent lamp, it constituted an object passing beyond the beautiful to the highest order of the sublime. At evening those two features of scenery were displayed in a combination scarcely attainable in any other field of nature. As the sun sank to the ocean, heavy clouds gathered about him, like sorrows round a death-bed. But as the soul that is departing in faith makes pain, feebleness, and poverty but the means of more fully displaying its graces; so the setting sun made each cloud a prism whereby to analyze his golden light and exhibit its variety of hue. The whole hemisphere glowed with indescribable beauty. All round the horizon islets of gold were floating on the bright blue surface of the "ocean hung on high;" while, in the west, the assemblage of gorgeous forms and dazzling tints was such as to produce a bewildering ecstasy. The prevailing hues were burnished gold and the pure prismatic red; but all the primitive colours were present, and formed themselves into combinations so lovely and so various as equally to outstrip the vocabulary and delight the eye: the "pale translucent green" of Bishop Heber was one of the most pleasing; while the blue, now combining with the red, now displaying its own brightest tints, exhibited every variety, from the deep purple of the pansy, to the lightsome blue of an infant's eye. On the craggy sides of many a mountain cloud were pencilled, with inconceivable effect, every hue that is delicate or brilliant, till the impoverished expression is glad to escape the difficulty of specifying.

by the aid of Mrs. Hemans's adroit summary, "the rich hues of all glorious things."

The charms of the nocturnal heavens are not inferior. Not only are new and brilliant constellations brought within the field of vision, but the pellucid atmosphere gives to the most familiar stars a larger disc and brighter radiance; while numbers, barely discernible in our clime, shine out from their retirement with modest lustre; the planets, and even some of the stars, casting on the wave streaks of silver light. When the moon is dark, the sea itself becomes an object of great interest. Whenever a wave curls, the broken waters emit a brilliant phosphoric light, supposed to proceed from animalculæ; turn which way you will, the eye rests on numberless fires, seeming as altars of incense sending up their grateful flame to heaven. Sometimes, as the ship dashed along in her course, the spray cast from her side sparkled with such hues, that you might have imagined yourself on a sea of liquid jewels. This marine phosphorescence is known in northern climates chiefly to fishermen, who, on a dark night, after a draught of herrings, have their humble boat glowing with an illumination of more brilliant tints than the proudest metropolitan saloon. If God has treasured up such mines of enjoyment in every recess of a world stained with sin, what will be the display of his resources where trespass and defilement are unknown!

I particularly remember, and shall never forget, one Sabbath night in those glowing latitudes. On gaining the deck, after our usual evening service, the scene which met our eye was not calculated to dissipate, but

to renew, the feelings of devotion. It was one of those nights to be witnessed only on a tropical sea, when the moon and stars seem so bright, so large, so near, as almost to make you think you are looking on other things. Orion was stretching his giant frame across the mid heaven, his "studded belt" seeming newly set with richer gems. From the west Venus flung a long stream of silver light, which danced on the wavelets of the peaceful sea. In the extreme north hovered the Great Bear, at once the memento of past scenes and the ornament of the present. A few degrees above the opposite horizon shone the four bright stars of the Southern Cross. Marshalled under these leaders the celestial host thronged in countless multitude around their peerless queen; and the Milky Way was spread abroad, as the white banner of their peaceful march. That host was sublime from its very numbers; and the impression became overwhelming by the thought that, though the least of them all was a sun, and the nearest at a distance too great to be measured, even by the giant hand of modern science;* yet all were made, sustained, scrutinized, and ruled by the great Being, whose presence at our lowly devotions had been shedding such sweetness on our souls. We felt it was a time to worship. The temple was not to be sought. One of God's own rearing was encircling us, and "reason's ear" heard, from the spheres suspended in its dome, a silvery chime, summoning us to praise and prayer. Yielding to the influence of our reflections, we sat down on the taffrail, and, with feelings not to be described,

* The successes of Bessel and Henderson were not then known.

sang Addison's inimitable version of the nineteenth Psalm. Such was the effect produced by the "spangled heavens" on Christian Missionaries: and yet the great sceptic poet, when describing their beauty as they beam on an eastern sea, asks,

> "Who ever gazed upon them shining,
> And turned to earth without repining?"

This is natural enough in a sceptic; for to him, earth is "a forsaken and fatherless world." He must look on the glories above, not as a child viewing the display of his father's wealth, but as an exile gazing on the shore from which he is excluded.

When approaching the Line, we fell in with two French ships, one being a frigate homeward bound, from the South Seas. We spoke her, and requested to have a packet of letters forwarded, which was readily granted. Accordingly, a boat from our ship boarded her, manned by six noble-looking seamen, who might have served as a specimen of British tars, and certainly were calculated to make anything but a mean impression of their prowess. The two vessels lay nearly side by side for some minutes; and it was a pleasing sight to view the two formidable ensigns—the meeting of which would once have been a signal for thunder and blood—peacefully spreading their folds within a few yards, and, as Campbell prettily expresses it, "wooing social the wind."

Although quite prepared for a day of barbarous sport on crossing the equator, I did not anticipate such a set routine of fun and absurdity as really occurred. One evening, when we were known to be very near the Line,

it was generally reported that Neptune would board us. And accordingly, at nightfall a noise of the voice species was heard proceeding from the bow,—loud, gruff, and monster-like enough to have been that of his Oceanic Majesty when rebuking the violence of Æolus. He demanded to know the ship's name and destination. The chief mate answered, and invited him to stay to tea. This he declined, on the score of haste; but promised to call in the morning, take a glass of grog with the captain, and see "some of his children who had never passed that way before." A vessel, purporting to be his car, was then dropped into the sea; and as it floated past exhibited a tolerably formed figure holding a trident, seated in a half-barrel, nearly filled with tar, which was blazing fiercely. The sea was quiet; so that, as the car rose and sank on the gentle waves, the alternate flash and darkness were observable until lost in the distant horizon. The next morning we found a kind of booth standing on the waist of the ship, so constructed by means of tarpaulings as to contain a considerable quantity of water. Over it was a board bearing the inscription,—"Mr. Nonsuch, *esey* shaver." After breakfast a procession came aft, with a great display of mimic pomp. A gun-carriage, decorated with flags, formed no despicable chariot, on which was seated Neptune,—an old sailor dressed with some attempt at classical costume, and smeared over with paint. Beside him a lusty young tar, in female garb and richly rouged, personated Amphitrite; while one of the boys, rejoicing in the title of "Master Neptune," (Triton, I suppose.) shared the royal seat. This august vehicle was drawn by eight

brawny seamen, disguised with grotesque painting and the most hideous masks. The charioteer, who, in all other stages of the proceedings, seemed to act as Mercury to the royal visitor, was so dressed as to look half Negro, half monkey. An elderly man, in shabby black, and wearing a hat cut into squares, with the words "Doctor Syntax" chalked upon it, carried a portable medicine chest suspended round his neck, in the fashion of a street organ. Another, going on all-fours, and covered with a sheepskin painted black, made a better representation of a bear than would be thought attainable by the human form. This burlesque procession moved slowly along the deck, and halted before the cuddy-door, where the monarch was met by the chief mate, with whom he interchanged civilities. Amphitrite then sang "Rule Britannia," all joining in the chorus; and, in spite of the heathenish aspect of the whole scene, when the full deep bass of so many manly voices burst forth in the words of our national pride, every tone thrilling with the impulse of patriotism, I could not repress the heave of a strong emotion, nor abstain from offering a prayer that Britons never might be slaves. A dram was then circulated, which even the monarch did not disdain; nor did Ursa forego his share. They next proceeded to the booth, beside which Neptune took his seat; the bear and his keeper making their way into the inside, and standing in the water. Outside, Mr. Nonsuch stationed himself, brandishing a piece of hoop-iron, having one side smooth and the other horribly rough. The smooth side he described as a "splendid razor, prepared by Queen Victoria's own barber:" this was for the passengers who would pay

a fine. The rough side he called "a very good plain razor:" this was for the use of those from whom nothing was to be expected but amusement. He was also furnished with a copious lather,—of what composition deponent saith not; but certainly not any of those which are so frequently the theme of magniloquent encomium in perfumery lists. These preliminaries arranged, Neptune, through his speaking trumpet, ordered his children to be produced. Nearly all the passengers had voluntarily chosen to submit to the uncouth tonsure, and were assembled in the steerage, waiting their summons. The sailors who had drawn the chariot now assumed the name of "constables;" and, proceeding down the after-hatch, speedily returned, leading the surgeon by a bandage passed round the eyes, and held tightly behind the head. A number of men had stationed themselves ready with buckets of water; and the moment he set foot on deck, dash went the contents of the first in his face, then another, and another, and another, in instant succession, until he was fairly seated on the top of the booth, with his back toward the water contained in it, where the bear and keeper were anxiously awaiting his descent; while he of the bandage held him with "no maiden's hand," ready, at the signal, to jerk him from his balance. Sundry ridiculous questions were then put, an ample lather applied, this scraped vigorously with the hoop, and then the jerk given by which he was precipitated backward into the water, where bear and keeper, pouncing on him, rolled him about till he managed to escape by climbing over the side. After all the willing passengers had been attended to, came the novices of the crew, who were

much more roughly handled. Beside the rough razor, and an increase in every other stage of torment, Dr. Syntax put many considerate questions respecting their health, and that of their family; taking occasion of the least motion of their lips in reply, to insert a nostrum in the form of draught or pill. Their medical properties were not stated; but, from the distance, they seemed to produce an instant and unique action of the muscles of the face. In almost every case these inflictions were borne with good humour: and when one or two showed symptoms of resistance, hot and heavy was the retribution which befell them. It is impossible that a custom so barbarous should continue to be tolerated, were it not that the monotony of a long voyage induces an *ennui* which makes any diversity acceptable to both crew and passengers. Sir E. Parry tells of beguiling the tedium of frozen winters in the northern latitudes by theatrical entertainments got up on board. This, no doubt, would afford amusement. But only imagine the officers, non-commissioned officers, and men of the royal navy, turned into mimic play actors and actresses! No one will wonder at the ceremonies on crossing the Line, who has witnessed the equally ridiculous, and far less modest, masquerade at Paris, on the Sunday and Tuesday preceding the commencement of Lent. That takes place, not in a lonely ship, among rude sailors,—but in the chief promenades of the belle of capitals, on the *Sabbath-day;* is shared in by both sexes, and gazed on by the *haut ton* of the country, whose glittering equipages, filled with ladies, crowd to witness the silly, contemptible, often indecent, exhibitions of thousands of male and female buffoons. And this is part of their

religious routine,—of what Mr. Keble would call their "Christian year!"

Shortly after passing the line we were favoured with the mild, steady breezes of the south-east trade-wind, which frequently carried us along at the rate of eight or nine knots per hour, on a sea smooth as a lake. This kind of sailing is delightful in the extreme. There is scarcely any motion; the water, rushing past, like an immense river, gives exhilarating impressions of progress; the ship spreading her volumes of canvas to the breeze, furnishes the eye with an object of no common majesty and grace,—exceeding her own appearance under moderate sail as far as the tree in full bloom does that of the early spring.

The regularity of hours, and absence of all temptation to wander, make a ship not disadvantageous for study. Having learned a little of the Canarese grammar before sailing, and being furnished with M'Kerrell's Grammar, Reeve's Dictionary, and a copy of St. Luke's Gospel, I was able to occupy myself with the language in which it would be my duty to preach. The want of capital letters, of divisions between the words, and of stops, makes the rudiments of Canarese perplexing, without a living tutor. From the commencement of a paragraph to its close there is no space between any two letters; so that you can no more tell, by the eye, where one word or sentence ends and another begins, than you can tell, on a railway, when you change counties. To be told that this custom obtains in the old Greek manuscripts may satisfy the student of its antiquity, but even that does not make him feel it to be convenient. Mr. Pope, my companion in the same

cabin, was occupied with the acquisition of Tamil; and day and night we toiled side by side, without being able to render each other any considerable assistance. Like other students, we had often to pursue knowledge under difficulties. Being young sailors, we did not know how to provide ourselves with the articles necessary to make a small cabin serve conveniently the double purposes of bed-room and study. One item of furniture, though not

"A bed by night, a chest of drawers by day,"

served me for nightly repose and daily employment; taking, in the latter case, the office of a sofa, Table I had none; so, seated on my couch, with Reeve's ponderous quarto of nearly fifteen hundred pages on my knees, my feet raised upon the rail of a chair, the Grammar by my side, the Gospel in my hand, and my sea-lamp hanging overhead, many a long hour did I spend in conquering the difficulties of our Lord's parable of the Prodigal Son. All went on pleasantly enough when the ship was steady; but when she laboured, it was no easy matter to preserve an equilibrium. What with the jolting of the books, the violent swinging of the lamp, and the effort to hold on, one was obliged to read by snatches, like boys in a class. Occasionally a violent pitch would dash chair, books, student, and all, to one side or other of the cabin; while the effort to regain our former arrangement would be twice or thrice foiled by similar catastrophes, before it could be accomplished. These difficulties may look formidable to one who has never passed beyond the threshold of comfort; but they are nothing in reality.

He that has an object in view so exciting as the acquisition of ability to preach Christ to the heathen, plods along without one thought of weariness or inconvenience; loving to tread the rough furrows, because he sees them strewn with the promise of many a sheaf. The drudgery of conquering rudimental difficulties was enlivened by reading the works or memoirs of those who, under greater disadvantages and fewer encouragements, had trodden the same path, and attained noble results. The young Missionary derives from the records of such heroes as Zeigenbalg, Carey, Swartz, and Martyn, the same incitement to lofty aims and giant toils which the noble Romans attributed to the statues of their ancestry. Their example kindles an intense flame. His heart burns to live as they lived; the remnants of worldly feeling are discovered in their lurking-places, and warmed away; while the fused affections are cast into form in the apostolic mould.

Near the island of Trinidad the trade-wind failed us. Up to this time our progress had been so rapid, that the officers began to talk of completing the voyage in thirteen weeks. But after losing our steady friend we were baffled with light and contrary winds, so as to make scarcely any progress for a fortnight. This lengthening of the voyage wonderfully shortened the temper of almost every one on board, except the sailors, who said that the fair wind was the owner's wind, but this wind was their wind; for the longer the voyage, the more money to draw. This view of the case surprised me; but it evidently comforted them. The result of the regular noon-day observations, by which is ascertained the progress made during the twenty-four

hours, was always a matter of interest to the passengers; but now they were to be seen pressing round the officers as eagerly as the politicians of a village round the coach which arrives from the county town during a contested election. At length, however, cloudy skies, cold rough winds, turbulent seas, and the appearance of several beautiful birds, called Cape-pigeons, indicated an approach to the region of the Cape, the half-way house of the Indian voyage. The passengers frequently amused themselves by shooting the poor creatures, which never fell into their hands, and would have been of no use if they had; but, dropping into the water, they must, when only wounded, have died a lingering death. These torments were inflicted for that cogent reason which justifies all kinds of cruelty to fish, fowl, and quadrupeds,—sport. Magic word! which transforms the ugliest barbarism into a captivating pleasure! The pigeons were joined by a large dark bird, called the Cape-hen, and also by several albatrosses. Of these latter two were caught, which measured ten feet across the wings. This feathered convoy bore us company for several weeks.

Not intending to touch at the Cape, we stood considerably to the south; and, in latitude 40°, encountered one of those gales for which that region is so notorious. It blew for upwards of two days; and Captain Foord, though an officer of long standing in the Honourable Company's service, stated that he had never seen it worse. But, with a good ship, an admirable commander, and competent crew, nothing occurred to excite grave alarm. The bulwarks were dashed to pieces;

a soldier had his leg fractured by the breaking loose of a water-cask; and a cadet who occupied one of the awning cabins had it literally filled with water, while he was asleep in his cot,—a sea having swept the ship, carried away his dead-lights, and burst in upon him at once through both window and door. He was almost drowned; and could scarcely believe himself when, gaining the deck, he found the ship gallantly riding the waves. With the exception of falls, bruises, and copious aspersions, we were preserved, by the mercy of Providence, from injury.

I could not help comparing the storm, when at its height, with the anticipations raised in my mind by descriptions of that spectacle. In almost every case you are told of mountain-waves, and that you cannot conceive the terrors of the scene. Now, the fact is, you find no wave anything like a mountain; and, most probably, you have carried your conceptions to a pitch by which the reality loses much of its effect. While you remain below, the roaring of the wind and the rush of the sea make the voice of the storm fearfully impressive; and to look at the waves from the narrow cabin windows, you are obliged to assign their height by imagination, for you cannot by the eye. It is here, where you feel the shock, and listen to the roar of the tempest, without being able to watch its movements, that the impression is most appalling. The ship pitches, writhes, and trembles beneath you, every joint in her giant frame groaning doleful complaints against the violence with which she is assailed. The howling of the wind, the rush of the seas making a highway of the

deck, the moaning of the ship, sound like the shock of the onset, the struggle of contending feet, and the cries of the wounded.

On deck the scene is truly grand. The sky is black, rugged, and shifting; the wind terrible, with its alternate gust, "seugh," and lull; the sea heaped up into a ridge of low hills on either side. The ship lies wriggling in the dale, like a winter tree, the masts stripped of all their clothing, the storm stay-sail being the only stitch of canvass set. A billow is rushing forward, with its white crest shaking like a lion's mane. Nearing the bow, it looks so lofty, that she must be overwhelmed; but, with mingled delight and apprehension, you see her rear herself upon its base; then rapidly mounting, till the summit is gained, she dashes forward, as if rejoicing in her escape. At that moment a cross sea strikes on the weather-bow with a dull sound, like the stroke of a battering ram: the noble bark shudders like a child in a thunder-clap; and while you are quivering by sympathy, a fierce surge careers along the deck, making your firmest grasp needful to prevent being borne away. When you emerge, the ship is reeling on the top of another wave, as if to shake off the moisture of her last immersion; and just as this passes from under her, it strikes fiercely on the counter, in seeming anger at being foiled in its assault. While staggering from the effect of this after-blow, a broken sea, like an ambush attacking in flank, dashes suddenly upon the weather-beam. Instantly the top-masts seem nearly touching the water; the firmest hold of rope or bulwark can scarcely save you from sliding down the almost vertical deck; it seems impossible the ship can right. Volumes

of water rushing over you confirm the impression that the moment of danger is come; but a counter swing restores you to your footing, and shows the bow plunging bravely into another billow.

The whole scene is sufficiently awful; and if one but give way to fear or fancy, it must be easy enough to make the waves mountains, the gusts artillery, and to crowd the picture with gigantic forms of horror. The lesson of a storm is one of humility. Each cloud may be the engine of destruction; you cannot bid it burst elsewhere. Each blast may bring the additional strength necessary to crush you; you cannot divert its course. Each sea may capsize or overwhelm your ark; you cannot lighten its stroke by a single drop. Surrounded by agents all potent to destroy, there is not one on which your skill can work the least amelioration. The sky, the wind, the wave, are eloquent with the announcement,—"God is all in all." You can do nought but meekly crave His compassion, or mutely await His will. And when the danger is past, man has had no hand in averting it. It came upon you, pressed you on every side, brought you to your "wit's end," showed human help to be vanity, and then disappeared. You are safe again; that safety is sealed with the hand of God, and attests itself his own gift. You see his agency through no obstructive instrument; you have been dealing directly with your Maker. Therefore "being glad, because they are quiet, they praise the Lord for his goodness."

From this time we proceeded in almost a directly eastern course; until, having gained the longitude of Madras, we turned northward, and began to look for-

ward to the close of our voyage. The probable time of landing, the people, manners, and productions of India, now became exciting subjects of conversation. We had some amusing instances of the difficulty with which Missionary motives are understood by the world. One evening a gentleman, who had spent several years in India, said to me, "If you take my advice you will go, not to the Mysore, but to the western coast." To this I replied, that it was not my intention to say a word to determine the station which might be assigned me. This he strongly objected to, on the ground that a young man ought not to leave himself in the hands of others. "But why," I inquired, "should I prefer the one country above the other?" "Why, for one thing, you would have a much easier situation." "But I don't want an easy situation; I am going on purpose to work, and intend to work as hard as I can." "Well, but you could save a great deal more money, for it is a much cheaper country." "But I don't want to save money: I intend to leave the country no richer than I entered it." "Oh, then," was the final reply, "if you don't want either ease or money, it doesn't matter where you go." Another gentleman, in conversing on our mission duties, said, "I suppose you will have a pretty good thing of it." I replied, that, no doubt, our provision would be quite sufficient. "How many rupees per month will you have?" I was obliged to confess my inability to answer this business-like question; and replied by simply stating, that, being confident our committee would make a provision adequate to my wants, it had never once occurred to me to ask what that provision would be. This elicited a look of all

but incredulity; and he said, laughing, "Well, I never before heard of a young man coming out to India without knowing what was before him." This conversation, being reported among the passengers, excited some attention; and possibly they regarded me as very much of a simpleton, until they had discovered that each of my three companions had been equally negligent to inform himself respecting his financial prospects. God forbid that our glorious mission work should ever be committed to men who could wait to consult prospects and negotiate terms! Marius aptly designated as *homines præposteri*, those who first assumed the consulate, and afterwards commenced to study military tactics. But exquisitely prepostrous as is an undrilled general,—a mercenary missionary is abundantly more so.

We soon re-entered the tropics; and about that time my sea-sickness, which had faithfully pursued me hitherto, abated. At the second passing of the equator, a calm detained us for two or three days. The sea was glassy, but not still. Every ripple disappeared from the surface; but there were long, heavy swells, like undulations in an extended sheet of tin. The smooth surface strongly reflected the light of a blazing sun: the glare was dazzling, the air motionless, the heat oppressive. It was an unquiet sleep for the giant ship; she now lay perfectly still, now turned heavily on her side. The canvass fretted upon the yards, and flapped against the masts, like an impatient steed chafing his bit. Every one looked the picture of *ennui* and lassitude. The very atmosphere was languid and unable to spread its wings, It is often said, that even a storm

is preferable to a calm; which is quite true, so long as the storm keeps below the danger-point. During one of those breathless nights I was called from my bed to witness the capture of a shark. He had been discovered, by the moonlight, sailing round the ship; was hooked, hauled up, and, after a stout resistance, despatched. He proved about seven feet long; and was cooked by the sailors, who, with the soldiers, were glad of some fresh food to vary their salt provisions. It looked very coarse, but is eaten freely in the South Seas; and also, I believe, on some parts of the coast of Spain.

Three months had just elapsed since our last glimpse of land. During that time a few ships, birds, and fishes were the only tokens that we were not alone in the world. Day after day, week after week, it had been to our eyes as of yore to the Trojan exiles: *Cœlum undique, et undique pontus.* After Captain Foord had taken his usual noon-day observations, on the 30th of August, he said, "If the wind holds, we ought to see the Friar's Hood (a mountain in Ceylon) about three o'clock." Some one expressed a doubt of his being able to calculate so accurately. He replied, that it was quite possible he might be out in his reckoning "a handful of degrees;" "but," said he, with a smile, which did not indicate much doubt, "we shall see." About half-past two, a man aloft cried, "Land on the weather-beam." Instantly passengers, soldiers, sailors, all, were straining their eyes in the direction indicated. It was some time, however, before any landsman could distinguish anything from the clouds. At length the outline of an elevated coast disentangled itself, and

the telescope shortly gratified the eye with groves of palm,—the region so long pursued was at length before us. It was a moment of gratitude and joy. The memory of dangers, apprehensions, and prayers; of mercies unnumbered, fears disappointed, and hopes fulfilled; came crowding upon the heart, and elicited a burst of praise to God. After a while, the summit of the Friar's Hood rose upon the view, fully attesting the accuracy of Captain Foord, and offering an example of the perfection to which navigation has attained, certainly not less striking than the case made so famous by Captain Basil Hall.

The groves of tall and branchless palm were soon visible to the naked eye, looking, in the distance, like groups of Corinthian pillars, with disproportioned capitals. On the ridge of a wooded hill rose a huge volume of smoke, showing that we were not gazing on solitudes, but that men were there. We could not help wondering how they were employed. Were they mourning over the conflagration of their village? Were they gazing timidly in the distance on tracts of sunburnt grass, which a spark had ignited, and which the flames were sweeping with resistless haste? Were they rioting in some heathen feast? Were they performing some occult sacrifice, far from the eye of civilization and reproof? We wondered how it might be; and while we wondered distance covered the hill.

Some journals had led us to expect that the shores of the spice-bearing isle, now beneath our eye, would greet us with aromatic gales. On naming this to Captain Foord, he smiled, and bade me ask the chief mate. My application to him also produced a smile; and,

after a time, the explanation, that, in the earlier days of voyaging, sailors took great delight in imposing upon the less-travelled landsmen. Accordingly, on nearing the shores of Ceylon, a few sticks of cinnamon were ignited, and carried to windward, so as to diffuse their incense over the whole ship. The delighted olfactories of sea-wearied passengers hailed, in this odoriferous gale, the promise of voluptuous festivity.

The next day found us again out of sight of land, sailing with a light breeze under a cloudless sky, and directly vertical sun. On coming on deck the following morning, I found a lengthened line of low coast close upon our starboard. In the distance, apparently right ahead, was what seemed to me a ridge of breakers stretching into the sea. To this I called the attention of the officer on watch, who said, "Why, that is the town of Pondicherry." That the town of Pondicherry! I then felt that I was looking on the continent of India. Leaning over the bulwark, and gazing on the extended coast, the tufted palms, the shining surf, and the distant city; what a crowd of confused but exciting suggestions rushed upon my mind! Home, with its endearments; the dangers and mercies of the voyage; the duties and hopes of my mission; native splendour, and European enterprise; Delhi, with its mosques; Benares, with its pagodas; Juggernauth, with its immolations; the suttee pyre; the pilgrim train; the Thug banditti; Timour and his conquests; Aurungzebe and his magnificence; Hastings, the changes of his lot, and eloquence of his impeachers; Dupleix, his talents, victories, and humiliation; Clive, his meteor course and maniac end; Swartz, the John of the Indian Apostles, by meek-

ness, integrity, and zeal, rising, without genius, to the loftiest heights of character and achievement; Hyder, the Napoleon of the East; Tipŭ, uniting the natural cruelty of Nero, with the religious bigotry of Mary; Carey, with the faith of Abraham and the powers of Grotius; Wellington, rising on the furthest horizon of our empire, and culminating at the very steps of the throne; Martyn, with his seraphic piety glowing on deep constitutional melancholy, like sheet-lightning on a black sky;—these, with images of heathen temples and orgies, Christian congregations and sacraments, sped across the mind in exciting disorder, and raised a state of feeling which baffled analysis; but the prevailing elements were gratitude and hope.

It was a day of restless excitement. Every eye was fixed on the shore, every glass extended, every voice busy in discussing the probabilites of landing that night. All were as impatient for Madras, as a school-boy for home, when returning at his first vacation. The wind was blamed for not being steady enough, the current for not being strong enough, the ship for not being fast enough, and the captain for not crowding sail enough. We passed Pondicherry sufficiently near to see some vessels, and to distinguish the governor's house. In the afternoon a native boat hailed us. Then St. Thomas's Mount was descried. Just as the sun was setting in a gorgeous horizon, the spire of St. Andrew's church was announced in sight. This speedily congregated the passengers on the forecastle; and it was not with ordinary pleasure that, by the help of a glass, I traced the slender forms of several masts, and three church spires, pencilled on the brilliant ground of the western sky. The Roads of

Madras, thronged with English and native ships, were presently in full view. Fort St. George and a line of lofty buildings stretched behind them. The distinctive flags were got ready to signal our name. We could see the flag-staff on shore, and witness the hoisting of what there could be no doubt was the question, "What ship is that?" But the distance was too great to read even the language of Marryatt's code. The light failed rapidly. Our ready signal was laid aside. Just as night fell we cast anchor opposite Fort St. George; and made up our minds to sleep once more in our sea-home.

CHAPTER II.

MADRAS.

The Scene and the Songster—Our Visitor—A Catamaran—Portrait of a Native—Native Penetration—Farewell to the Ship—The Surf—Blacktown—Hindu Women—A Singularity in Cleanliness—A City given to Idolatry—Hospitality—The first Prayer—The Snake Charmers—The sacred Serpent—The Prayer Meeting—A Palankeen—The Crowd—The Torture—The best Calling—Munro—The Mount Road—Eastern Landscape—The Mount—St. Thomas—The lost found—Brotherly Love—The Inquisition astonished—Mission Churches—The olden Time—The present Time—The Charter—Early Struggles—The Siege—The Capture—Lally's Fall—Heats—Monsoon—Sea and Land Breeze—Providence in Climates.

The night was moonless. The lighthouse lamp blazed before us. The well-known appearance of two lights, in rapid transit, told us, ever and anon, that some fellow-countryman was whirling in his buggy along the beach. Glimmers in the distant south indicated where St. Thomé stretched along the shore. The starlight faintly showed the tall, unearthly forms of the English ships, sluggishly rolling on the waves; while, on the other hand, a bristling underwood, barely traceable, marked the situation of the "mosquito fleet," as our sailors delight to call the native craft which throng the northern portion of the Madras Roads. The scene was strange, and still, as to all human sounds; but the hoarse voice of the surf roared in the distance, like a storm upon a grove, with occasional lull, but instant

repetition. A sudden flash crossed the scene, followed by a peal of man's mimic thunder. Then came the roll of a drum beating to quarters the crew of a man-of-war that lay close by.

Rising wild and high above the moan of the surf, a harsh noise was heard from the direction of the shore, which seemed to be vocal: but whether articulate or inarticulate.—the strain of one voice, or the effort of many,—was at first a mystery. As it neared, however, a voice was distinctly heard performing a something. I had heard lilting song and holy anthem, the glee of mirth and the *keena* of bereavement.—but never anything with which the strange tones of the unseen warbler might be classed. Its uncouth strains, sounding in the darkness of that exciting scene, awoke strange imaginings. One could not but wonder what would have been the effect of such a phenomenon on the superstitious crews of Columbus, had it visited them on that anxious night when, after the first glimpse of the Caribb lamp, they were held in doubt as to whether the morning sun would reveal that wondrous Ind which they were pursuing, or only the blank of sea and sky opening before them,—nature's silent reproof of their leader's temerity.

We learned that the singing—for singing it was, but such as only Tamul boatmen can achieve—proceeded from a catamaran. It ceased by our ship's side: and presently we had on deck a man of light frame, nearly jet black, and destitute of drapery, except a very scanty morsel. On his head was a neat conical cap, of soft, mat-like texture, made from the leaf of the palmyra-tree. Doffing this, from between the plies, of which it

had two or three, he produced a note from the master attendant to the captain. This was the first I had seen of the people of that great country which was to be the place of my future labours; and never before had I gazed on a human being with such feelings. I thought of the multitudes he represented; of the deep, deep sinfulness in which they lay; of the superstitions that crushed, and the vices that polluted them; of their identity with ourselves in origin, fall, immortality, and redemption: and, as I thought, my heart grew full and heavy. If ever I offered a prayer, it was then,—that God would give me grace to preach the Gospel to these, the brethren of my nature, but strangers to my hopes. Charged with letters from almost every passenger, he presently took his departure, with the same wild chant as before.

A catamaran (literally, "tied tree") is a raft formed of three cocoa-nut trees lashed firmly together, the middle one being a little longer than the other two, and the whole so flattened on one side as to make a surface nearly even, and to preserve the same side uppermost under all accidents of weather. It measures about fifteen feet, and carries two or three men; one of whom, by means of a paddle, navigates with great dexterity and ease. The body of the raft being almost wholly submerged, the appearance from a distance is very singular, the men seeming to tread the waters. They are free and unencumbered navigators: no drapery embarrasses their persons: their bark can spring no leak, lose no rudder, nor sink in any sea. When the terrors of the surf are not to be faced by any species of boat, they venture without fear, are swept off by a

wave, climb on again, are once more overwhelmed, again remount, and so effect their passage. When at any distance from the coast, dispensing with the paddle, they show you a brown three-cornered sail, with two or three black men, skimming along the surface of the sea in a style which recalls all the lake legends of fairy skiffs. Those whose nautical excursions have never carried them beyond the region of saloons, stewards, and pantries, will not so much covet the position, as they will honour the self-denial, of Mr. Percival, when told that, in the prosecution of his mission duties, he has, more than once, passed on these exposed and comfortless floats from Negapatam on the continent, to Jaffnapatam in Ceylon,—a distance, I believe, of about eighty miles.

The sound sleep that had followed a day of unequalled excitement was broken at morning-light by a perfect storm of the same wild songs which had formed one of the wonders of the preceding evening. From the cabin-window a crowd of awkward boats and black men were seen thronging the ship's side. Hastening, without loss of time, to the deck, I found a large number of natives; presenting, in their graceful costumes, a pleasing contrast to the nude Neptune of the catamaran. To form an idea of a respectable Hindŭ, take a man of the middle size, with a light, supple, graceful figure, the complexion of a dark hazel-nut, a good forehead, small but regular features, a black eye, quick, intelligent, and curious, and a moustache covering the upper lip. On a head closely shaven you place a turban of white or turkey-red muslin, with stripes of gold; a tight frock-coat of calico, without any collar, and white as

snow, clasps round the base of the brown neck; a piece of the same cloth, showing a broad stripe of gold or crimson, forms a kind of flowing trousers, which cover the person nearly to the feet in front, but behind leave the brown leg, from the calf downwards, standing out in contrast to their white folds. The costume is completed by a pair of red slippers, always down at the heel; while the toe, spreading to a great width, turns up in a curl. You are struck, at first, by a mark on the forehead, indicative of the religious sect to which he belongs: it is frequently in the form of a trident, having all the parts white but the central prong, which is bright yellow. In other cases it consists of three stripes, which cross the whole breadth of the forehead, intersecting a dark circular mark in the centre. The trident, or any vertical mark, designates a worshipper of Vishtnŭ; horizontal marks point out the votary of Shiva; and those sects which unite the worship of the two rival divinities, combine both.

Of figures such as this a large number was perambulating the deck, inquisitively eyeing the new-come Europeans, who stared at them not less inquiringly in return. They made free offers of their services for different employments, exhibiting certificates of character, and describing their qualifications in tolerable English. The passengers, having been more anxious to see the natives than to make a good impression, had contented themselves with a hasty toilet, and were all in morning attire. I stood amongst them in like garb, without anything to designate my office. But a native, after glancing round, walked right up to me, and said, inquiringly, "Master Missionary?" Being the only

missionary at that moment on deck, this impressed me strongly with his power of discernment. Further intercourse with the people abundantly confirmed that impression. They are keen students of character. One of the first things a Hindŭ does when introduced to an Englishman, is to scan him thoroughly, mainly with the view of deciding in his own mind whether or not he is a *kopishtanu*, "a man of anger." For, by some means or other, they have got the impression that a white face, though a very respectable thing in India, is not in itself an absolute guarantee against infirmities of temper.

The deck at this moment afforded a scene of uncommon variety and animation. There were the red coats of the British soldier, and the blue of the British tar, mingled with the light snowy costume of the Oriental, and the unclad sable of the boatman. Presently pale-faced Englishmen, in round jackets of white calico, jumped on deck, inquiring for their friends. Then came joyous meetings. Some of the soldiers looked wistfully on, and their eye seemed to say, "There is no one to welcome me." The rising sun shone on Madras. A line of noble buildings stretched along the northern beach, their chunam fronts glistening in the morning beam. The sombre fort was right in front, with its white lighthouse and church spire; while the ensign of England, waving from the flagstaff, seemed to proffer us both welcome and defence. The minaret of Mohammedan mosque, the tower of heathen temple, and the spire of Christian church, were equally sharing in the brightness of the new sun. To the left, the eye caught sight of many detached dwellings scattered along the

shore, and looking like the villas adjacent to English towns. The city looked fair and beautiful; but the pleasure of the prospect was repressed by the recollection that it was "given to idolatry."

Three missionary brethren, Messrs. Haswell, Male, and Fox, soon welcomed us to India. Having taken leave of our truly kind and gentlemanly captain, we left, with hearts full of gratitude to our gracious God, the ship where we had spent so many days and seen so many mercies. Months of preservation on the sea, the happy close of a long voyage, the presence of Christian brethren, the knowledge that we were again amongst sanctuaries, and the hope of shortly preaching among the Gentiles the unsearchable riches of Christ, were thoughts under which the soul thrilled with no common emotion. We looked to the ship with thanks, to the shore with prayer.

We found ourselves seated in a large clumsy boat, with high sides of rough plank. It was manned by a crew of ten, eight men rowing with long thin sticks, having a flat piece of wood at the end, like the fluke of an anchor; and these puny oars, instead of playing freely in the rower's hand, as with us, are tied to a pin in such a way as to permit the performance of the necessary evolutions, and yet secure them from escape in all emergencies. They pulled with more energy than order, and sang excruciating ditties all the while. These ungainly conveyances, called masoola boats, are rendered necessary by the peculiar character of the landing-place. Along the coast of Coromandel a surf of three successive waves rolls heavily upon the strand. Even in fine weather it is loud and high; but in a storm, terrific.

No European boat can cross it. Its violence at Madras has prevented the formation of any harbour, and compels ships to anchor in the open roadstead, at the inconvenient distance of a mile or upwards from the shore. The masoola boat is the only safe medium of communication. It is constructed of planks, which, after being bent by fire, are not nailed to timbers, as in English boats, but are fastened to one another by a monster seam. The edges of each plank being pierced with numerous holes, a cord of cocoa-nut fibre is employed as a thread, and thus they are literally sewed together, although that term conveys an inadequate impression of the strength and compactness of the frame. Held together thus, they easily yield to the pressure of the wave, when it is removed resuming their natural shape, and in this way are able to dare the surf, in which none of our boats can live, unless, indeed, the new and beautiful process of building recently introduced into Chatham dock-yard, in which timbers are dispensed with, be found to combine the requisite strength and pliancy with the elegance of a British man-of-war's boat.

The morning being perfectly mild, the surf was low; but the shock of its three waves was sufficient to accredit the accounts given of its violence in stormy weather. The power of these comparatively small waves, where there is an evident progression of the water itself, strongly confirms the hydrostatic theory which regards the propagation of sea-waves, like those of a corn-field, as not consisting of any progress of the agitated body, but simply the progress of an undulating motion, while the particles affected by it vibrate in a vertical line.

The dangers of those in-shore waves which, though the body of water is small, yet carry it in a forward direction, clearly show that, if the huge masses of elevated water which form the waves of the open sea had a forward motion of anything at all like the apparent velocity, not only must the very first of them overwhelm a ship, but a violent storm in any part of the ocean would be attended with consequences of a most destructive character, even in remote provinces of the watery domain. The last of the three waves cast our boat aground upon the beach, on which the men leaped out, and laid hold to prevent her being carried back by its return. Two men from the shore then ran into the water, carrying a small arm-chair on their shoulders, which they presented, and, receiving a passenger, hastened to the dry beach, where, having discharged him, they returned for another, and so on till we were all standing safely and thankfully on the soil of India; to which many cheerful faces of various hues gave us a hearty Christian welcome.

In a few minutes Mr. Fox was driving me briskly through Blacktown in his buggy. The streets are of tolerable width, and occasionally lined with rows of palm. The houses are for the most part built of mud, flat roofed, only one story high, without windows, and beautifully whitewashed, thus presenting a continuous line of smooth white wall, broken only by narrow doors. Projecting about two feet from the wall, a raised seat of the same material, and similarly whitewashed, runs along the whole extent of the street, and is broken by a kind of pillow-like elevation, which divides unto each house its share; thus affording an agreeable open-air

couch for the inhabitants. On these were seated a number of men, some cross-legged, like tailors; others with their black eyes peeping over the knees, which stood up dusky and meagre, supporting the chin; others again, resting the weight of the whole body upon the heels, a position which, though less disagreeable to the eye of an European than the last named, is more distressing to his feelings, as he is put in pain for the poor man's heels and toes. These are the usual positions of the natives: the climate is so dry that no danger arises from sitting on the ground, and consequently the use of chairs would only be increasing the number of their wants without any corresponding addition to their comforts. For, though we may think otherwise, they feel more easy in their own posture than on a chair. I have seen a native, on taking a chair, fidget from side to side, backward and forward, and in every other way by which he could express uneasiness, until, taking courage, he pulled up his legs, crossed them under him, adjusted himself with an air of great complacency, and so sat perched as we are wont to see eastern kings painted on their musnuds.

Several women were passing along the streets: they are about the middle size, slender, symmetrical, and brown; the hair, long, glossy, and jet black, is gathered into one heavy and ungraceful clump behind. An elegant flowing garment covers the person from the waist downwards; from the right side a fold of the same piece passes across the shoulders, leaving the small of the back exposed, but covering the chest, and even the face, when the wearer pleases. In some cases a very small, tight bodice is added; for without this the other

robe, like the Roman *toga*, requires the hand to preserve it in position. The favourite colours are purple, white, yellow, and red; frequently plain, but often also in stripes or cheques; while a broad border, of some bright contrasting colour, is always disposed with great taste. The dyes are, to an English eye, very striking, as, probably from the advantages of climate, they have a vividness which we cannot give; while the white far surpasses our finest bleach. Thus attired, with the left hand supporting a waterpot on the head, and the right carrying another, the Hindŭ housewife returns from her morning errand with an air of considerable grace, but defective vivacity, presenting a figure more picturesque than animated. The waterpots are exactly the shape you would obtain by taking a cabbage, covering it with brass, and leaving a large aperture at the top of the form of a tulip. But no description, and no European drawing, can give so accurate a view of the natives of India as is afforded by their own drawings on *talc*, where you have the colours of person and costume, the shape of implements, and the air of easy listlessness, or pompous conceit, with amusing exactness; while the very defects in perspective seem to render the picture all the more instructive. Besides the ladies who had been with their waterpots to draw water, a number of others were engaged in an occupation strange to western eyes,—diligently gathering into baskets all the cow-dung they could find on the streets. This is as much a domestic duty as the former, and serves also both cleanly and culinary purposes. It is spread in broad patches on a wall for several months, to bake in the sun, and then used for fuel. Part of it is employed,

while fresh, to wash the floors and walls of the mud-built dwellings; for which purpose it is highly serviceable, when plentifully diluted with water. Odd as this may sound in English ears, every one who has proved the difference between a dirty choultry and the cleanly freshness of one just washed out with this strange preparation, will bear testimony to its utility for that unlikely purpose. Many other females appeared at the doors sweeping their houses, or marking the ground just before the entrance with white stripes of the ashes of cow-dung, crossed into various cheques, according to taste. This is done as a kind of cleanly ornament. It is a favourite amusement with writers on India to rate at the natives for dirtiness; but it is done in perfect ignorance of their domestic habits.

Though the whole scene was novel and interesting, one aspect rested on it all; one thought was continually recurring,—it was a city given to idolatry. The men and women before me were wont to worship and kneel down, not before the Lord their Maker, but before things themselves had made; the houses I was passing contained idols; at that instant incense was ascending to scores of miserable stocks; and hundreds of accountable immortals were in the act of prostration before man-made gods. These were thoughts to chill the heart; to invest eternity with redoubled awe; and to make the soul yearn for the time when God should look down upon earth and see no rival to his claims, no wanderer from his fold.

A short drive carried us through the northern gate of the city into the suburb of Royapuram, where we were most hospitably received at the house of Mr.

Orme, who kindly became our host in the absence of Mr. Crowther, then at Pulicat. We immediately sat down to breakfast, which differed only from a bountiful repast of the same kind in England, by the addition of several Indian fruits and such a profusion of dishes as made it resemble the French *dejeuner à la fourchette.* With tea and coffee, bread and butter, toast and eggs, one seemed rather more at home than suited the idea of an oriental meal; but yet the strange fruits, the crowd of black attendants, the play of switches protecting you from flies, and the swing of the punkah above, sufficiently attested a strange land. The favourite term to describe a punkah among Indian tourists is a "large fan." It is hard to imagine what idea will be formed, by a person who has never seen one, of a fan large enough to serve a whole company, and playing overhead. You have observed by the side of a country inn a sign-board suspended so as to flap about with the wind. Now just fancy one of these, instead of being nearly square, extended so as to stretch the whole length of a long dining-table; you suspend it from the roof,—for ceiling there is none; in place of the wind, you use a line which, being attached to the punkah, is carried through a doorless doorway into another room, where stands a servant, and, by slow but constant pulling, produces a refreshing motion of the air.

It is said that some of the patricians at Rome had such a multitude of slaves, that one was constituted nomenclator, being charged with the duty of reciting to his master the names of the others, who were so numerous as to require an official memory. I am not aware that this ancient and reputable custom has yet

been introduced among our countrymen in India; but certainly their retinue is such as to suggest its desirableness. This arises partly from a willingness to live in state, partly from the inactivity of the natives, who believe the doctrine, that many hands make light work, and partly from their habit of considering the several offices of menial service as so many different trades. The man who cooks the meat would as soon think of washing the plates as would a milliner of making horse-shoes; and the man who grooms your horse would as soon think of cutting grass for him, as a hosier would of making hats. All the servants find, or profess to find, their own provisions; sleep about the verandahs or outhouses, no one ever dreaming of affording them apartments; and receive wages ranging from five to ten rupees a month, according to the dignity of their office, and the wealth of their master.

After breakfast we were summoned to family worship. It is always refreshing to sanctify our mercies by the word of God, and prayer; but, on this occasion, the hymn seemed passing sweet, the word flowed with fresh unction; and few can tell the feeling with which the missionary breathes his first prayer on heathen soil. The soul has no greater thoughts than those with which such a moment supply him. Separated from home and its joys, the world and its excitements, he there gives up spirit, soul, and body to be employed of God in conferring, by the Gospel, life and immortality on multitudes who are hopeless and unholy. The knowledge that he is doing God's will, the hope of winning souls, and meeting them in heaven, fill his breast with a lofty happiness, which must strangely

contrast with the feelings of those who land on such shores with no higher aim than to get a living, or make a fortune, or earn a name.

During the morning we observed in the neighbourhood a high pole, with the appearance of some machinery at the top, on which sat a large bird, of bright brown plumage marked with white. The pole, we learned, was erected for the barbarous uses of the chettle-feast, about to be celebrated; and the bird was that species of vulture which receives divine honours from the Bramhans, being that of Garurda, the steed of Vishtnŭ. To look on those two objects, and think of the worship the one was wont to receive, of the torments the other would be used to inflict, they seemed a meet emblem of idolatry pedestaled on human woe.

Whilst walking in the verandah, some snake charmers approached, and forthwith began to show us their skill. They produced several bags and baskets, containing serpents of the most poisonous kind,—the cobra di capello; then blew upon an instrument shaped like a cocoa-nut, with a short tube inserted, and producing music closely allied to that of the bagpipe. The animals were brought forth, raised themselves to the music, spread out their head, showing the spectacle-mark fully distended, and waved about with considerable grace, and little appearance of venom. The men coquetted with them, and coiled them about their persons, without any sign of either dislike or fear. This power of dealing with creatures so deadly is ascribed by the natives to magic. Europeans generally account for it by saying, that the fangs are extracted. But the most reasonable explanation seems to be, that when

the snake is first caught, by a dextrous movement of the charmer the hand is slipped along the body, until it reaches the neck, which he presses so firmly, as to compel an ejection of the virus,—thus destroying, for a time, all power to harm; and that this operation is repeated as often as is necessary, to prevent the dangerous accumulation. If this be true,—and I believe it is,—nothing is necessary to the safe handling of these reptiles, but a knowledge of the laws which regulate the venomous secretion. The wonder seems to lie in the power they possess of attracting the snakes by their rude music, and seizing them, in the first instance. But enough is known to make it evident that, in what all natives and many Europeans regard as mysterious and magical, there is nothing but experience, tact, and courage.

With a Hindu, the cobra is the most sacred of reptiles. Most of the natives pay him divine honours; in some places he has temples consecrated to his special worship; and not even the charmers, who seize, imprison, and sport with him, will take away his life. The grounds of this are several: Shiva makes him his chief ornament; Vishtnŭ reposes on his ample folds on the sea of milk; and the whole earth is sustained upon his head, which has consequently a flatness observable on the back part of it when distended. The native Romanists are said to account for this by saying, he was the serpent that tempted Eve; and that she, requiring help to reach the fruit, availed herself of the offer of his head, which the pressure of her foot flattened. As illustrative at once of their astronomical system, and their rare talent for flattery, the following

circumstance may be named:—A Bramhan desirous of a court appointment had obtained an introduction to the celebrated Bhoja Raja; and entering into learned discussion, delighted his majesty by the display of superior parts. After having exhausted his store of problems in the vain attempt to perplex the candidate, the king, in despair, demanded to be told why the serpent was made without ears. "Oh," said the pundit, nothing at a loss, "the reason of that is very plain. When Brumha was engaged in the work of creation, he foresaw that, in process of time, Bhoja Raja would arise, and, by unequalled achievements, spread his fame through the fourteen worlds. Some great Rishi, in his delight, would hasten to Adi Shaysha, the serpent who upholds the world, and recount the wonders that were astounding the universe. Adi Shaysha, transported by the matchless rehearsal, would forget his position, and, as he does when delighted with music, would shake his head, by which the world would be cast out of equilibrium, and all things be reduced to confusion. To prevent this, otherwise unavoidable, catastrophe, the serpent was made without ears." But though they, in theory, hold serpents to be deaf, they never walk in a grassy place at night without making a noise to frighten them away. And, notwithstanding their veneration, I have known them to stand quietly by to see one killed; and the low-caste people make curry of the flesh, which they pronounce a delicious dish.

We spent the night under the same hospitable roof. The beds used in India are very hard mattresses, generally of cocoa-nut fibre, with pillows of the same substance, so unyielding, that some one has humorously

compared them to petrified meal sacks. A single sheet is the covering, and mosquito curtains of thin gauze complete the equipment. It would be hard for the Madras magistrates to impose a worse punishment than to make a man lie (sleep if he could) on a good feather-bed, with Holland sheets, Witney blankets, Marseilles counterpane, and damask curtains. A comfortable bed in England is a warm one, in India a cool one.

The next day we attended a prayer meeting, held in the school-room under our Blacktown chapel. The larger part of the persons present were Indo-Britons;* and it was no small happiness to hear fervent thanksgivings for our preservation, and prayers for our usefulness, offered up to God by persons themselves the fruit of missionary labour. For a full description of this chapel, as well as for many particulars connected with the mission in Madras, and the Tamul country generally, I would refer to the valuable and accurate work of Mr. Hoole; a work full of information on the customs, literature, and religion of the Hindus, and quite free from the exaggeration and incorrectness by which so many clever books on India are vitiated.

At this meeting we first met with Mr. Crowther, who received us with a most affectionate welcome, and conducted us to his own house, where we were kindly entertained during the remainder of our stay. It was on this occasion I first entered a palankeen, and shall not easily forget my excessive discomfort at being car-

* To this class the name "Half-caste" is odious, and "Country-born" distasteful. They like "East Indian," but that is unintelligible, for persons in Europe would suppose it meant natives. "Indo-Briton," is at once acceptable, and significant.

ried by my fellow-creatures. But when one learns that the men are cheerful and content, have no other means of living, and are, physically, one of the finest castes of men in the country, though he does not become wholly reconciled to it, he feels it would be as unreasonable to refuse to employ them, as to refuse to burn coal in England, because your fellow-creatures must live and toil underground to obtain it. To form an idea of a palankeen, look at the body of an omnibus, and you have the exact shape; only just imagine it removed from the wheels, and reduced to about six feet long, with a corresponding decrease of the other dimensions. The entrance is on the side, which is open or close at pleasure, by means of sliding doors. From the centre of the end panel projects a thick pole, for about four feet, behind and before. The passenger having entered, has the choice of lying full-length, sitting up as in a bed, or, as the natives do, cross-legged; but other posture he cannot adopt. Three men seize the pole in front, and raise it upon their shoulders; three more do the same with the one behind; the head-bearer strikes up a song, and the whole start off at a quick trot.

On the Sunday morning I proceeded to Royapetta, in order to be near St. Thomé, where I had to preach at night. Here first it was my happiness to see a native Christian congregation, of which the number was small, but the appearance devout and pleasing. Mr. Haswell read the Liturgy and preached in Tamul; and though I could not understand a single sentence, yet the scene awakened reflections which made it a season of surpassing interest and profit. In the afternoon Mr. Haswell went to distribute tracts, and converse with the multi-

tude he knew would assemble in the immediate vicinity to celebrate the chettle feast; and I gladly embraced the opportunity of accompanying him. We found an immense crowd in an open place around a pole, similar to the one we had remarked at Royapŭram. They received the tracts offered, and freely entered into conversation; but all that passed was secret from me, except so far as looks might happen to reveal it. It is a fearful thing to see a number of men met together to do evil. But when the evil is part of a system, when it is accounted right and even religious, when it includes both dishonour to God and cruelty to man, when nations are in sympathy with the deed, and when, standing amidst them, you see them rush along the road that leadeth to destruction, and are not able so much as to say, "Turn ye, turn ye;" Oh, then there is a pressure upon the heart, the intensity of which none can tell, but he that with a Christian's feelings has looked upon the abominations of heathenism perpetrated on the Sabbath. A movement in the crowd presently called our attention towards the pole. From a shed placed near it, was led forth a man naked from the waist up, but having round it a cloth so tied that a part of it formed a kind of bag, which was filled with flowers. A little below the shoulder appeared two large hooks, inserted into the back, one on either side of the spine. Across the top of the upright pole was another of great length, and so affixed that it could revolve freely, and either end be lowered or raised at pleasure. A rope was attached to each extremity. One of these was seized, the end of the cross-beam was lowered nearly to the man, the rope was passed through the loop of the

hooks, and tied fast. Four men began to pull upon the rope attached to the opposite end, and thus gradually raised that to which the poor victim was attached. He bent forward, was lifted from the ground, and hoisted into high air amid the plaudits of that great concourse over whom he hung quivering. The men holding the rope then began to move slowly round, causing a corresponding motion in the other end of the transverse beam, by which the miserable object suspended from it was made to describe a circle in the air; where, as he writhed and shuddered, he frequently took a handful of flowers, and let them fall on the crowd below, by whom they were caught up as if an angel were scattering blossoms from the tree of life. After having four times traversed the circle, the poor victim was taken down, and led away. Mr. Haswell continued earnestly conversing with the people, and distributing tracts at such intervals of excitement as permitted the withdrawal of their attention from the spectacle, until four persons had submitted to this revolting penance. Disgust rendered a longer stay impossible; and as we left, I could hardly prevent my desire for the ability to preach Christ to those multitudes from heaving into impatience. Sympathies, at once poignant and ennobling, are stirred in the breast of a missionary standing amid masses of heathen. The heart bleeds to think of their darkness; but finds large consolation in the assurance of being an agent, however humble, in God's great plan for their regeneration. Faith opens the view of better days, when Jehovah shall be honoured and man blessed; hope exults in the prospect, and joy, unique and fervid, glows upon the heart. Then does the Gospel seem

glorious, and the commission to preach it an unspeakable gift. When standing by the death-bed of the venerable Henry Moore, I asked him, "Were you again young, would you wish to apply your life to any other purpose than that to which it has been devoted?" The aged servant of God, raising himself in his bed, and looking me stedfastly in the face, said, warmly, "No, not at all, not at all: the best thing a man can do, the very best, is to preach the Gospel."* It is truth. To be employed as God's instrument in making men good, is the noblest, happiest, most remunerative application of our brief but momentous life. Would to God that every Christian parent and every Christian youth felt it so! Then we should not see the offer of a cadet's commission, a merchant's partnership, or a civilian's appointment, hailed as "a good thing," and a commission to preach Christ to the Gentiles reluctantly yielded to with speeches about heroism and sacrifice.

During our stay, the friends at Madras held their Centenary Meeting, having purposely delayed it till our arrival. It was numerously attended, and evinced the same spirit of holy joyfulness and gratitude which so remarkably characterized like assemblies at home. Many delightful testimonies were borne to the power of saving grace. From some of the statements it appeared that a few pious individuals had formed themselves into a society, adopted rules very similar to those of the Wesleys, and taken other measures remarkably coincident with the usages of Methodism, before they had any

* The Rev. Henry Moore, the friend and biographer of John Wesley, who died at the age of ninety-three.

correct information of its character, and previous to any of our missionaries reaching their shores.

During our stay, we visited St. Thomas's Mount, which, beside its religious celebrity, has a military importance as the depôt for the Company's troops. The drive is said to be one of the finest in India, and certainly is the most interesting in the neighbourhood of Madras. Leaving Blacktown, you cross the spacious esplanade which is flanked on the east by Fort St. George, with its sloping glacis and all but impregnable rampart, beyond which rises the roar of the "much-resounding sea." You shortly pass Chantrey's noble equestrian statue of Sir Thomas Munro, a man who, by eminent talents, unswerving rectitude, and careful attention to the people's interests, in the various offices to which his merits raised him, attained a reputation among the natives of South India, far higher than that of any other European. In the remote villages the brilliant name of Clive is forgotten, that of Wellington barely known; but Munro's is cherished and dwelt upon with the liveliest admiration. I have known a native say, with evident pride, when asked from what country he came, "I am from the country of Munro," meaning the Ceded Districts. I once heard a Bramhan bitterly complaining of the Madras authorities for placing his statue in the open air, as he thought exposure a mark of deficient respect; and added, with as much feeling as if resenting an insult offered to his mother, "I saw an unclean bird perched on the head of the illustrious Munro." It is said that in the districts which were favoured so long with his judicious government, the natives fre-

quently call their children by his name; and that, somewhere near Gooty, a likeness of him is kept, and treated with a veneration very similar to that paid to their gods.

As you proceed, the way is crowded with pedestrians, steeds, and equipages. The English soldier, the brown native, and the Indo-Briton, with light garments and leisurely pace, move along in continuous and picturesque succession, a stream almost as constant, but not so impetuous, as the torrents of Cheapside and the Strand. Mingled with these are the light Arabian horse, the sturdy Persian, the sprightly Pegu pony, the bullock, belled and caparisoned, and occasionally the tall, soft-paced camel, bearing riders in the respective costumes of England, Persia, and Hindŭstan. Then you have the open carriage, with a black groom holding on by either side, and keeping pace with the horses, however fleet; brandishing their switches the while, as a warning to all musquitoes; buggies, with the master driving and the servant pursuing on foot; native carriages, with a dome-shaped roof supported on four pillars, showing you the portly bust of some Hindu seated cross-legged, while the coachman, perched upon the pole, urges on two bullocks, each graced with a necklace of tinkling bells: then there are palankeens, with their troop of singing bearers; tonjons, with pale children and black ayas, and of bandies no end. The way, thus animated, is lined by rows of trees, among which you recognise the aloe, the palmyra, yellow tulip, mango, banyan, and lime. At every few perches a neat gate opens into a cultivated enclosure with a handsome residence, while a glow of intense sun-light sheds

brightness over all the scene. The Armenian bridge of Marmalong is an interesting object, near which is a Romish church, said to stand on the spot where the Apostle Thomas had his residence, and whence he took his last flight when assailed by the heathen. The Mount, distant from Madras about eight miles, is an isolated cliff of granite, rising abruptly from a plain near the shore, and crested by a simple but picturesque Romish church. Steps have been cut in the rock to facilitate the ascent, which they may do in the case of the infirm or timid, many of whom doubtless are to be found in the crowds of pilgrims resorting hither; but for my own part, I would much rather clamber a hill side, however rugged, than drag up flight after flight of dull, heavy stone steps. The summit was the first place from whence we obtained any extensive prospect of the country. To our east spread the wide and placid sea, fringed by the foaming surf, and agreeably spangled by the strange sails of the dhonie and catamaran. Immediately below us lay the cantonment, with its barracks and bazaar, the noble English church, and our own beautiful gothic chapel; enlivened by figures in light costume, and the evolutions of the soldiery at drill. The view inland has but little interest, the land spreading abroad in one extended flat, with a few hills in the distance, scattered clumps of trees, and paddy-fields of rich green; but not anything to save the landscape from an air of dulness and monotony. Persons at home are apt to look at every thing oriental through an atmosphere of beauty and romance, with which the books read in childhood surround them, and which those of after-years too often leave undisturbed. Lands where

the orange and lime, the banana and tulip-tree, the talipot and banyan, flourish; whose soil imbeds diamonds and nourishes incense; in whose forests elephants range and peacocks glitter; where the tedious night never abridges the day, nor the dew-drop chills to frost, where nature never puts on the hoary covering of a barren age, but stands always dressed in the green of prolific youth;—such lands, it is thought, must be far fairer than the common-place scenery at our own doors. But it is not so: our groves and gardens, our fields and flowers, are lovelier than theirs. Palms are graceful; but when constantly before the eye, the branchless and scaly shaft becomes monotonous: banyans, when many-trunked, form an object of singular interest; but their occurrence in such specimens is not so frequent as to affect the general aspect of the scenery; and, on the whole, though the woods of India never are leafless as ours in January, they are never equal to them in May, either as regards appearance or perfume. Those who have wandered in the woods of Bolton-Abbey, by the banks of the Dart, the Avon, or the Wye, have stood on Croagh-Patrick, or Richmond-Hill, or sailed on the waters of Lough-Erne or Lough-Gill, need not sigh for the region of cloudless suns, nor envy "the green of its shores, or the blue of its skies."

But it was not possible to stand on St. Thomas's Mount without other reflections than those suggested by the landscape. On this spot tradition states, that the Apostle, having fled from his usual dwelling-place, before referred to, was overtaken and slain. On the strength of this tradition the church now standing was erected by the Portuguese; and time was when

their war-ships never sighted the sacred place without greeting it with the honours of a royal salute. A Christian missionary, then, was not likely to stand here without asking, "From that plain below did the very hand which our blessed Lord called to touch his sacred wounds, point the eye of nations to their God? And did that hand, on this very spot, stiffen in a death incurred for love of Him whom once he doubted?" The authenticity of the tradition is matter of dispute.* But

* Hamilton doubted not; Bishop Heber believed it firmly; and Captain Swanston, in a paper on the "Primitive Christians of Malayala," in the Royal Asiatic Society's Journal, boldly states, "This is not asserted on the authority of any obscure tradition; but unites in its favour all the proofs which can warrant its correctness; the accumulated testimonies of the first ages of the church, of St. Jerome, of St. John, surnamed Chrysostom, Athanasius, and Eusebius." Mr. Hough, however, to whose historical researches Christianity in India is greatly indebted, has given to the question a lengthened review, and concludes decidedly against the tradition. He does show that in the ancient ecclesiastical histories of the West, it has a very slender foundation; but does not inform us of the records held by the native churches, or what credit he supposes due to them; an omission which certainly weakens the impression of his argument. His own pages, however, contain enough to show that his conclusion is no more free from historical difficulties than the other; nor, indeed, so much so. The tradition exists, and has existed from a very early age: if we deny its truth, it is but reasonable that we account for its origin. This Mr. Hough endeavours to do by referring to two persons of the name of Thomas, who, having an early connexion with the native churches, might have been confounded with the apostle, owing to the identity of name. It is not professed that either of these introduced the Gospel into India; for Mar Thomas lived in the ninth century, and Thomas the Manichee in the latter part of the third; whereas Mr. Hough admits the existence of Christianity in India previous to the mission of Pantænus from Alexandria, which occurred in the second. Now, the existence of churches in the second century being proved, it follows, they could not adopt the name of any labourer subsequent to that period, as the name of their founder: and that, if adopted at all, it must be on account of eminent influence

be the decision of history what it may, it was not to be expected that Romanism should exist near a place

and reputation. But had any man attained such consideration amongst them that they delighted to be called by his name, they would surely not have rejected his doctrines; and there being no kind of proof that these churches embraced the heresy of Manes, is strong presumptive evidence, that whosoever might be the Thomas from whom they took their name, he was not a Manichee. All the information given of such a missionary is, that Manes "is said to have sent one of his disciples, named Thomas, into India to propagate his heresy;" which certainly is slender ground whereon to rest a grave conclusion.

As to Mar Thomas, Mr. Hough himself scarcely goes so far as to attribute to him the origin of the name; and that he should at all cite him in the case is not easily accounted for, when himself informs us, that in the seventh century the claims of the Patriarch of Seleucia were disputed on the grounds that "the Christians of Persia and India were Christians of St. Thomas;" a statement sufficiently proving, that a person who lived in the ninth century could have nothing to do with giving them that name. Again, he notices the celebrated mission of our own Alfred the Great to the "shrine of St. Thomas in India," which, leaving England, as it did, in the same century as that in which Mar Thomas flourished, proves that in the West a belief prevailed that the apostle had laboured and died in India, long before it could possibly have arisen from a confusion of two persons separated from each other by so many centuries. From whatever source the primitive churches of India derived the name of Christians of St. Thomas, and whatever may have been the origin of the tradition which ascribes that name to an apostle, it seems tolerably plain neither is to be found in the persons from whom the historian of Christianity in India supposes them to have arisen.

But beside these matters of consideration furnished by Mr. Hough's own pages, there are others which go strongly to corroborate the tradition. We must take into account the ancient origin of those churches, their own confident belief that the apostle founded them, their use of the Syriac language, and the assertion of their own historians, (see Swanston's Treatise as above,) that, up to the year 345, there had been no foreign bishop or clergyman amongst them,—a fact which goes far to confirm the opinion, that the India visited by Pantænus was, as so many good authorities suppose, not Hindustan, but Ethiopia. Another fact of great moment is, that the Jews on the Malabar coast have a tradition stating that their fathers landed

favoured with such a rich mine of pious marvel as that presented by this tradition, without adopting means to develope its resources. Accordingly, after the Portuguese had established themselves in the neighbourhood, their priests, as quaintly narrated by Hamilton, dis-

in India in the year of our Lord 69, and that the Apostle Thomas had reached it seventeen years before, having arrived in 52. Now, as this leaves a space of nineteen years after the ascent of our Lord, and mentions a time when the intercourse with India had just become greatly facilitated by the enterprise of Hippalus, there is about it an air of considerable probability.

As Parthia is named by Eusebius as the sphere of St. Thomas's ministry, we should have been led naturally to expect that he would penetrate into the north of India, which lay so adjacent, to which attention had been long directed, and which had been made comparatively known by the residence of Megasthenes at Palibothra, which, notwithstanding the opinion of Robertson in favour of Allehabad, appears to have stood on the site assigned by Major Rennell, at the junction of the Sone with the Ganges near Patna. But the appearance of Christianity so near the apex of the peninsula, renders it very improbable that it was carried thither from the north; and points out the commerce with the west as the channel of its introduction. Here lies the only difficulty of believing that the labours of Thomas called Didymus, were the first which ever brought Christ to the knowledge of Hindus. Bishop Heber states that the passage from the Persian Gulf was then quite common; a statement, however, which cannot apply to the Persian ports, as there did not then exist any maritime commerce from that country, in consequence of the religious aversion to the sea entertained by its inhabitants; an aversion never overcome till, when, under Artaxerxes, they had thrown off the Parthian yoke, which event did not occur till the third century. Now, as no port was open on the Arabian Sea, or the eastern shores of the Persian Gulf, the missionary must have sailed from some port in Arabia or Egypt. To the former country the traditions of Malayala trace the apostle, so that the only difficulty is to reconcile the statement of Eusebius, that his sphere was Parthia,—a very wide term, with the fact of his being found in Arabia some twenty years after the commencement of his labours; which difficulty, we apprehend, will not be esteemed formidable.

covered the lance with which the apostle had been slain, and the cross stained with his blood, which, with other relics equally genuine, are preserved to this day, and occasionally exhibited for the edification of the pilgrims resorting to the holy place. St. Thomas's Mount is to the Romanists of India, what Croagh Patrick is to those of Ireland, or à Becket's tomb once was in England.

On descending from this remarkable eminence we found a good company assembled in our elegant little chapel, where we held a missionary meeting, characterized by lively feeling and liberality. I cannot refer to this chapel without being reminded of a circumstance which occurred at a subsequent visit, when, after the service, a young man in artillery uniform came into the vestry. He was introduced to me by Mr. Pope, as the son of one of our ministers at home, a man of great distinction and respect. His looks indicated a full heart, and he said, "I have just heard from home. My father is dead." He wept sore, reproaching himself bitterly for conduct which he feared had shortened the days of the excellent parent he was now lamenting. After his feelings had somewhat subsided, he told us that, had this terrible news reached him only a short time before, he feared to think what the consequences might have been; but that God had in mercy brought him to a state of heart in which he was better able to bear his self-reproach. "For some time," he said, "I have felt the burden of my sins, and longed to become a new creature; but in the barrack-room I had little opportunity to seek God, and was interrupted in every attempt to pray. At last my desire became so earnest, that I resolved to seek Him where I could do so in

quiet: so, retiring to a grove of cocoa-nut trees, I there knelt down, poured out my soul to God, cried for mercy, and continued wrestling with him until he was pleased to reveal Christ in my soul, and to give me the sense of his pardoning love. Had it not been for this, what should I have done now?" There was every token of sincerity and true penitence: we rejoiced over him greatly, but with trembling; for, knowing the temptations by which he was surrounded, it was impossible not to have apprehensions. The event, however, showed that the work was of God: he continued stedfast, left the army, and obtained a respectable situation. His health failed, he was ordered into the interior, and on the journey was attacked by cholera. His only attendant was his excellent wife, to whom he had not long been united, and who now watched the agonies she could not alleviate, closed his eyes in death, and committed him to a lonely grave far from any place where Christians bury. She has since been called to follow; but survived long enough to tell of the peace and hope which comforted her husband during his last struggle, and animated her amid the gloom of her own bereavement. We doubt not that now father and son are together before the throne of God and of the Lamb, adoring his mercies, and rejoicing that he sent his servants to the far country whither the prodigal had wandered.

During our stay at Madras, the missionaries of the different denominations met, to spend an evening at Mr. Crowther's: this they are in the habit of doing monthly, at one another's houses in turn, for the purpose of mutual profit, by considering subjects connected with

missionary enterprise, and offering united prayer. There were present,—Episcopalians, Presbyterians, Independents, and Wesleyans, being all the Protestant denominations having establishments in Madras. This exhibition of union and love is most refreshing, and yet it is melancholy that our miserable littleness has reduced us to a condition wherein even natural co-operation assumes the aspect of an attainment, and wherein we are pleased with ourselves for just beginning to be something like what our religion requires.

Being ignorant of the Tamul language, the vernacular at Madras, it was not possible for me, by personal observation, to learn much of the state of religion among the natives. The oldest mission is that of the Romanists. It is probable the Portuguese found some Christians on their arrival at St. Thomé, and managed to incorporate them with their own church. At one time they had large numbers of natives who called themselves Christians; but the disputes of the clergy amongst themselves so violently agitated their congregations, and brought upon them such reproach, as greatly to diminish their influence. When the English established themselves in Madras, so far from taking any steps to spread the truth, they thought the importance of their place might be increased by a settlement of monks; and, accordingly, some Capuchins were invited. One of these, not being sufficiently a Mary-worshipper to suit the Romanism of India, was cajoled beyond the English territory into St. Thomé, there kidnapped, hastened off to Goa, and immured in the Inquisition. Some time after, a party of English landed in that city, and went about seeing the "lions" of the place; among

others, they wished to view this far-famed tribunal of religious terror,—and were admitted; but no sooner had they gained an entrance, than, like Glenara's accusers,

"Each mantle, unfolding, a dagger displayed."

The gate was immediately secured; then, rushing into the presence of the Inquisitors, they presented to that astounded tribunal the unwonted alternative of instant death or the surrender of their victim. Caught for once in their own snare, they yielded, and Father Euphrem was borne back in triumph by his deliverers. The Romish cause, thus befriended, has not languished, although the number of their adherents has never recovered the loss occasioned by the wars of the monks. In the year 1841 there were, in Madras, St. Thomé, and the neighbourhood, fourteen priests,—some Portuguese, and some from Maynooth. These two parties, rekindling the embers of former fires, had been vigorously contesting their rights, and suing each other in the courts at Madras. They have several large churches. The uniform testimony of every one, lay or clerical, whom I consulted, as to the character of their converts, was, that they are not superior to their heathen neighbours in any point of enlightenment, civilization, or morality; that they wear heathen marks, maintain the heathen institution of caste, and participate in heathen festivals; while they have many processions, and such like, which are only accommodated heathen ceremonies, adopted to conciliate, and remove all idea of difficulty in passing from the rule of the bramhan to that of the priest.

The Church of England has long had a valuable

mission at Vepery, a suburb of Madras, where there is a noble Gothic church, a printing-press, and a considerable number of converts. This establishment is under the Society for the Propagation of the Gospel in Foreign Parts, which also has a station at St. Thomé. In Blacktown, the Church Missionary Society have a large chapel in an important cause; also an institution for training natives and Indo-Britons for the work of carrying the Gospel to their countrymen. There is also a bishop, with several chaplains; but as they receive their appointment and salary from the Company, they are regarded as government officers, and confine their labours to the English, none of them preaching in the native tongues.*

The London Missionary Society has a large chapel in Blacktown, and another in Vepery. The American brethren, besides several schools, have a large printing establishment, which employs a considerable number of presses, and is conferring incalculable benefit on the country. The Church of Scotland had also three missionaries, who now belong to the Free Church. They conduct an English school, in which an excellent education is given, and every means taken to imbue the minds of their pupils with Christian truth. Some recent successes in their labours have so alarmed the Bramhans, that steps were taken to agitate the whole country against mission schools. Our own missionaries have several schools, congregations, and small societies. Taking all the labourers together, they are, as compared with the magnitude of the work, few, very few;

* The bishop, however, takes the supervision of the missionaries of the Church of England.

but their faith is unshaken, their hope high, and their resolve steadfast to proclaim Christ to the multitudes who surround them, until, moved by his attractions, they shake themselves from the dust, and rise to lay hold upon his strength.

Swartz tells us, that, in his early days, he sought in vain for a pious European in India; and I have myself heard an old missionary say, that when he first was in the country, he knew not one. At that time, Englishmen were in the habit of saying they left their religion at the Cape of Good Hope, where they should resume it on their way home. They were faithful to the spirit of this surrender: their state-religion was Paganism, their private devotions paid at the shrine of Mammon, of Bacchus, and of Venus. But, by the blessing of God on the word of his grace, there is now another state of things. Profanity has grown timid, intemperance is awed into secresy, and the miserable copyist of Eastern voluptuousness is a rare excrescence upon Anglo-Indian society. Perhaps there is not any similar number of our countrymen, among whom may be found a larger proportion of persons truly converted to God, than the civil and military servants of our Indian government. The following extract from the work of a French writer, M. De Warren, reviewed in the Church-of-England Quarterly, though designed to caricature the piety which (blessed be God) is cherished in the hearts and families of so many of our countrymen in India, yet affords an important testimony of its existence, and so delineates some of its features, that Christians at home will gratefully recognise the family likeness. Speaking of Madras, he says, "At my last visit,

in 1840, I was struck with the change that had fallen upon all social relations. The *saints*, as they are called in the country, have spread themselves like a leprosy over all society. A dark fanaticism,—excusable when it is sincere, but odious when it is a hypocritical mask, assumed by avarice or ambition—has invaded everything. Merchants, and civil and military functionaries of the highest rank, who desire to economize almost the totality of the profits of their enormous salaries, assume this mask voluntarily enough, in order to escape from the obligation of contributing to the pleasure of the community, and from the exercise of a ruinous hospitality, which was once almost exacted from them. In place of dinners and balls, which once cost them much, they now entertain you with sermons, which cost them nothing. Young men who wish to advance in life also put on the same mask, (which suits them even more indifferently still,) that they may find favour with the powerful, and obtain appointments from them. Thus, at Madras, a man had need to be upon his guard: an invitation to a dinner, or even to a *soirée*, is nothing but a trap. Immediately after the repast, or previous to the introduction of the refreshments, the master of the house compels you to purchase or to expiate your pleasures, by keeping you *at least an hour* on your knees, while he gives forth a sermon, under the guise of a prayer, with all the nasal recitative of the Roundheads of the time of Cromwell. In my preceding visits to Madras, I considered that I had fairly to complain that the English seldom spoke; but, like the father of the dumb girl in the *Medecin malgré lui*, I confess that I preferred their silence of former days, to their

rhapsodies of the present; and I would, with all my heart, have rendered them as dumb as they were used to be."

On the last day of the sixteenth century, that spring-time of great men and great events,—the century of Luther and Knox, Galileo and Bacon, Tasso and Spenser,—the virgin Queen of England affixed her name to a deed, incorporating "the Governors and Company of the Merchants of London trading to the East Indies." Little thought the clear-sighted Elizabeth that such a transaction was destined, in the providence of God, to give a wider sweep to the sceptre of her successors than any other of her reign. Little thought the "merchant adventurers" that, in the scroll then presented, they laid the first stone of a monument to their country's prowess far more colossal than any her Edwards or Henrys had reared. And little did the century that followed promise such wonders. The early days of British enterprise in the East—like the youth of Clive, who first raised it from adventure to empire—were remarkable only for a want of promise. Overawed by the Portuguese, beaten by the Dutch, circumvented by the French, and despised by the natives, our countrymen maintained a precarious existence of little measures and great murmurings. The islands were their main desire; but, driven by the jealous Dutch from one post after another, they sought refuge on the coast of Coromandel. Here, again, pursued by their rivals, they were compelled to abandon their first settlements at Masulipatam and Pulicat. At length they found rest at Armegon; but that settlement proved unsuitable for trade, and another was desired. Thirty years after the

signing of the first charter, powers to purchase land for a new town were granted to Mr. Day, the English agent at Armegon, by Shri Ranga, Raja of Chandragheri. At the place assigned was a local naik, whose father was named Chinappa; in deference to the wishes of this officer, the new town was, after his father, called Chinappa Patam, or the city of Chinappa; under which name, contracted into Chinapatam, it is still known among the natives. The origin of this great city, like that of others more ancient and more renowned, was sufficiently humble. "At the Company's first beginning to build a fort," wrote the local agency to the Presidency of Surat, "there were only the French padres, and about six fishermen's houses; so, to entice the inhabitants to people the place, proclamation was made, in the Company's name, that, for the term of thirty years, no custom of anything to be eaten, drunk, or worn, should be taken of any of the town-dwellers."* But the Theseus of Coromandel, intent, like his Athenian prototype, on an aggregated population, did not confine his inducements to mere fiscal immunities, but proceeded to add ecclesiastical attractions. He, as already stated, encouraged the settlement of Capuchin monks; not, as Mr. Hough very naturally supposes, with the view of affording the benefit of their instructions to the members of their own community already settled in the Company's territory, but for a reason, to him, far more cogent; namely, "in order to draw the Portuguese from San Thomé, who, being considered as Europeans, would add to the military reputation of Madras, consequently attract the resort of the natives, and with

* See Orme's Fragments, Note xxxviii.

them an increase of trade."* Thus, at the foundation of our oldest existing presidency, religion was made the handmaid of secular advantage,—a procedure which, however derogatory to our national character, has, unhappily, not been confined to obscure factors and struggling enterprise, but been too often adopted by exalted dignitaries, ruling an empire, the very magnitude of which might have made salutary impressions of responsibility.

Fourteen years after its foundation, the new city had attained such importance, as led to its being erected into a presidency, having Bengal dependent. During the early part of its existence, the whole Carnatic was swept by the armies of Viziapore and Golconda; but it was too insignificant to excite their jealousy, and therefore escaped unhurt. The first enemy who threatened its peace was Doudd Khan, one of Aurengzebe's generals, who, in 1702, laid ineffectual siege to it; after which time it enjoyed forty years of peace, rapidly increasing in commerce and importance. In September, 1746, Labourdonnais arrived on the coast; a man who, by genius, courage, enterprise and moderation, was equally fitted to conquer or govern: and who, had his employers in France only possessed similar foresight, and had he met with a coadjutor, instead of a rival, in Dupleix, would, in all human probability, have crushed the nascent power of England in the East. He had imported to the Mauritius a number of Africans, called, in the histories of the times, "Caffres," but more likely Mosambiques; had them trained in military discipline; and, with an army consisting of one thousand French,

* See Orme's Fragments, Note xxxviii.

four hundred sepoys, and four hundred Africans, aided by a fleet from which the English admiral commanding in those seas had run away, he commenced a vigorous investment of the place. Five days reduced the garrison, consisting of two hundred men, to the necessity of signing articles of capitulation, by which it was agreed that the French should take formal possession, receive a stipulated ransom, and then deliver up the place to the English. But Dupleix, having already formed the project of an Eastern empire, with France for its head, and himself for its executive, foresaw that the English would be dangerous rivals; and, in direct opposition to the honourable remonstrances of Labourdonnais, violated the agreement, marched the Madras authorities in triumph through Pondicherry, bravely repulsed the Nabob of the Carnatic, who appeared with a large force to claim fulfilment of a promise that Madras should be his reward for services rendered to the French against the English, and retained the place for three years, until compelled to resign it by the treaty of Aix la Chapelle. Though these proceedings were for the time so disastrous to the British, yet to them may be traced the foundation of that pre-eminence which they shortly after began to acquire, and have since maintained. Up to this time, they were under awe of the Mogul armies, and formed their own solely of Europeans. Dupleix defeated a Mogul force by one of very inferior numbers, and had in his ranks an efficient auxiliary, formed of natives whom he had trained to the European mode of warfare. Thus he taught his opponents, as Peter the Great said Charles XII. did the Russians, the way to beat himself: the English

learned the superiority of European to native valour and discipline, as also the possibility of raising from the natives a valuable force; they were not slow to practise these lessons, and by so doing have become masters of India.

The flight of ten short years brought another French armament under the walls of Fort St. George. Count de Lally was a man of great bravery and talent, whose enmity to the English was not the result of national jealousy, as in the case of Labourdonnais, or of personal ambition, as in that of Dupleix; but of that fierce religious rancour which characterized the Irish Papist of his days, and is yet far from being extinguished. He landed in India with the full intention of extirpating the British from that country; marched on Fort St. David, where they had been sheltered during the time that Madras was in the hands of the French, took it, and razed it to the ground; occupied Arcot; assailed Madras, taking Blacktown, and laying formal siege to the fort. The siege was active, the defence resolute: two months elapsed before any decisive advantage was gained. The breach was reported practicable, the assault ordered for the hour when the moon should set; Lally was exulting in the hope of a triumphant tomorrow, the besieged determined to repel him or die; when Admiral Pocock appeared with an English fleet; the besiegers broke up precipitately, and fled; their opponents became assailants in turn. After several minor actions, Lally sustained a decisive defeat at Wandewash, and the power which a few years before had been paramount in the Deccan and Carnatic, was reduced to dependency on the Mysorean usurper. Since that time the thunders of

Fort St. George have reposed; and the place where, only two centuries ago, there were "about six fishermen's huts," has for many years been the second city of Hindustan, giving a home to nearly half a million inhabitants, presiding over a territory wider than some of the great kingdoms of Europe, and boasting an army of above seventy thousand men.

The climate of Madras is hot, the thermometer often rising to 100° in the shade; sometimes being known to reach 110°; and in the coldest night of winter not falling below 65°. But, as the absence of marshy ground prevents those exhalations so deadly in the tropics, and as the wide Bay of Bengal both protects it on the east from all noxious influences, and serves to fan its inhabitants by cool, refreshing gales, it is more salubrious than many a more temperate place; and not a few "old Indians" prefer it, with all its heat, to the cooler regions of the Mysore. The most unpleasant part of the year is in the month of May, when the sun is vertical; and, concurrently with this, a wind from the west brings all the heated air of the peninsula in a scorching current, like a furnace-blast, producing a disagreeable irritation of the skin, known by the name of "prickly heat;" so that to drink a cup of tea at that time, subjects you to a sensation like the simultaneous prick of a thousand needle-points. It is a familiar fact, that wherever two portions of atmosphere are at different temperatures, the dense air of the cooler region will press in upon the space occupied by the lighter air of the heated one; as every one knows who has ever sat at the window of a crowded place of worship, or other warm room. Now, as this principle acts equally on the

large scale as on the small, its effects are very observable in the winds which prevail in those regions of the earth where climate is not subject to endless vicissitudes, but annually exhibits its phases with little variations. Thus at Madras, when, shortly after the summer solstice, the lands to the north become greatly heated, the winds naturally tend in that direction, and thus the westerly gale becomes south-west, which wind brings from the Indian Ocean immense quantities of rain, the clouds carrying which break against the western Ghauts, or are expended on the table-lands of the Mysore, transmitting only occasional showers as far as Madras. Again, after the autumnal equinox, the regions lying southward become more heated, and the consequent rarefaction of the atmosphere in that direction demands a supply from the north. To meet this, vast currents of air rush southward, and, receiving in their course the natural trade-wind direction, blow from the north-east, and burst upon Madras, in the month of October, with terrific effect. The barometer falls half an inch, the air becomes still and oppressive, portentous clouds load the sky, and the monsoon opens with thunder, lightning, and rain, which far surpass anything witnessed beyond the tropics; while the wind beats fearfully, and the roaring of the surf makes wrathful interchange with the peals of thunder. For more than six weeks there is a succession of such storms, with bright intervals; and then succeeds a period of dry, clear, and, for Madras, cool, weather. So accurately is the commencement of this season of tempests reckoned on, that, on the 15th of October, the flag-staff at the Fort is annually struck, as a warning to ships in the Roads, that their anchorage

is no longer safe; and when any are hardy enough to delay their escape for a day or two, they not unfrequently suffer shipwreck for their temerity. Besides these unfailing annual phenomena, God has made a daily provision for moderating the temperature of those sunburnt shores. The sea does not absorb heat so rapidly as the land: consequently, under the sun's rays, the atmosphere of the latter becomes warmer, and thus the denser air of the sea presses in upon the land, causing an agreeable current, known by the name of the sea-breeze, which rises before noon, and blows steadily till evening cools the land. Again: the land radiates its heat more rapidly than the sea, and thus, in the sun's absence, sinks to a lower temperature; so that its atmosphere, in turn, becomes cooler, consequently more dense, and so presses out upon the sea, making what is called the land-breeze, which rises about midnight, and blows from the shore till morning. These arrangements of divine Providence beautifully exemplify the truth, that God "rejoices in the habitable parts of his earth, and his delights are with the sons of men." Did he not care that the earth should be peopled, and that men should live in comfort, how differently might he have arranged the distribution of land and sea, and so rendered whole continents, if habitable at all, the arid nursery of a miserable and complaining population! We find that, in traversing the surface of the globe, the equator wholly escapes the great continents of Asia and Europe, crosses Africa and America at points where the breadth of the land suddenly decreases, and touches no great island but Borneo and Sumatra. Thus by far the greater portion of the earth's surface lying within

the tropics exposes to their torrid heats, not the habitable plains, which drought would desolate, but the pathless and homeless sea, whose waters yield to the same influence those abundant evaporations which serve to fertilize the land that our Father's care has gathered beneath milder skies. By this gracious arrangement the continents are both saved from destructive heat, and provided with copious irrigation. But were it otherwise,—were the great continents spread around the torrid zone, and the oceans now so beneficially occupying that region transferred nearer to the poles,—then the aggregation of such masses of land beneath tropical suns would engender a heat, in all likelihood, destructive to animal life ; while, on the other hand, the waters, acted on by more languid suns, would have but a slow evaporation, and consequently the supplies of rain become scanty, as the necessity for their profuseness increased. Under such a distribution, extreme heat and defective moisture must induce wide-spread sterility, and if not destroy, at least sorely embitter, all existence. The same benign wisdom is also manifested in the allocation of the great ranges of the Mountains of the Moon, the Himalaya, and Andes, in those parts of the three continents where the copious rains and large rivers, which they attract and originate, are most necessary to constitute the adjacent countries "habitable parts."* In our favoured clime these reflections are not so likely to arise, as where fiery suns, "in a hot and copper sky," make one feel that if Providence had not provided means to "abundantly water the earth," life must shortly lan-

* The same benevolent design is conspicuous in the elevation of immense plateaus in Asia, Africa, and South America.

guish. There the eye is far more open to the records, and the ear to the voice, by which nature proclaims the mercies of her Author. The bright testimony, "God is love," is seen equally emblazoned on ocean and plain. "The trees of the field clap their hands, the floods lift up their voice," even "the mountains and hills break forth into singing," and all creation speaks eloquently of His wisdom and grace from whom it sprang.

CHAPTER III.

THE JOURNEY "UP COUNTRY."

About sunset on the 27th of August, on the compound, or grass-plat, in the front of Mr. Crowther's house stood four palankeens, looking like dwarf omnibuses dismounted. About fifty natives, with dusky skins, and drapery of tarnished white, surrounded them. These consisted of four sets of bearers, each numbering twelve; for, though only six carry at a time, they change every seven or eight minutes, and thus require double the number actually engaged. The spare men run beside the others, and so rest. They were busy girding for the journey. A piece of coarse, half-bleached calico, several yards long, and about one and a half broad, is

produced; a man stands at either end; it is doubled to about half a yard's breadth; then the one to be girded passes his own end about his person, and, turning round and round, while the other holds with all his might to secure its tightness, he winds it up on his waist as in factories they do on a roller. This preliminary accomplished, they are ready at a moment's warning. Each set of bearers has a musaljee, a gentleman bearing in one hand a tin vessel, like a small gasometer, with a spout, and, in the other, an instrument which at first sight you are ready to imagine a cigar, intended for some illustrious Brobdignag. The vessel, you learn, contains oil, and the monster cigar is a flambeau, which, though looking very like tobacco, is composed of rags tightly rolled together into one hard stick of about three feet long and several inches round. On the end of this he pours a quantity of oil, ignites it, fans it by running, till it flings on the pathway a broad and brilliant light. He feeds it with fresh oil, as regularly as a student snuffs his candle; while its hardness is such as to secure its lasting through the night. This custom beautifully illustrates the parable of the Ten Virgins, as showing the folly of neglecting to take "oil in their vessels with their lamps."

Then there were the Caverdi coolies, each man with two tin boxes painted green, and shaped like a wooden bee-hive, but rather larger. These contain the travelling wardrobe, and are suspended from either end of a long bamboo lath, which the coolie places on his bare shoulder, and trots after the palankeen with one box swinging before and the other behind. The bearers also have coolies of their own, who carry in

similar style a pyramid of round black earthenware pots, which constitute their itinerant kitchen. For, being particular in caste matters, they will not eat any food unless cooked in their own vessels. Shortly after night, the flambeaux were lighted, the coolies took up their loads, the bearers stood round their palankeens, and the completion of the multiform preparations was announced. Taking leave of our fellow-voyager, Mr. Pope, who was appointed to stay in Madras, and of our other kind friends, we each repaired to his own unsocial vehicle. We were hoisted from the ground; *Bay-din, bay-din,* shouted, in a loud recitative, the head bearer of the foremost palankeen; and in a few minutes the flash of torch-light, and the song of four dozen voices, announced our progress along the "Great Western" road to Bangalore.

The example of the munificent usurper Shir has not been wholly lost on our Indian Government. He was a father to travellers; ordered that they should be entertained at the public expense, built caravanseras from the Bay of Bengal to the Indus, planted the road with trees to shade them, dug wells every two miles to refresh them, and erected splendid mosques to prompt and accommodate their devotions.* The religious part of these princely arrangements was not likely to find imitators in our authorities; but they have conferred on travellers an invaluable boon by the erection of bun-

* Mill's "History of British India," by Wilson, vol. ii., p. 328. It is a remarkable proof of the civilization of his government, that about the middle of the sixteenth century he established a post system, by means of horses, "for the more rapid conveyance of intelligence to government, and for the accommodation of trade and correspondence."

galows at convenient distances, along the most frequented roads. Bungalow is the term invariably used in India to designate a house of one story, built after the style adopted by Europeans. In those provided for the benefit of the wayfaring, you find a table, half a dozen chairs, and an old pensioned sepoy, who, gracefully combining the native obeisance with our military salute, makes a profound salaam, and proffers his services to obtain any requisite articles of food. Of these he presents you with a list provided by authority, with prices affixed, to prevent imposition. You are amused to find a sheep stated at a rupee, (two shillings,) and one of an inferior order at fourteen annas, one and ninepence. The sheep of the Carnatic are small and lean, without a particle of wool, the hide being just like that of a calf; but their mutton is tolerably good. Almost every day during a journey a deputation from the bearers, after very low salaams, present a request for *seep:* the gift is not near so much as would be paid to coachmen and guards at home for a night's travelling; but it is not claimed as a right, only sought as a favour, and, when granted, they go away as pleased as schoolboys with a holiday.

Before daylight we were deposited in the verandah of the bungalow at Streepermatoor, about twenty-seven miles from Madras. By sunrise the coolies had arrived with the changes of raiment, and culinary apparatus; the sepoy was in attendance; milk and eggs were procured, and we lacked nothing whereby to make comfortable the hours which the heat of the sun compelled us to pass under shade. During the day the sepoy laid on the table a small box containing books, all of

which we found to be of a valuable and religious character. This laudable custom is frequent in the bungalows; and I never saw one of those little libraries that did not bear marks of having been well read. It is true that in some places there are unseemly records of distaste for such literature. I recollect one poetical effusion complaining that they were

"Too dull to read, too good to tear."

But who can tell the benefit that may accrue even to a traveller of this temper, from his consenting to relieve the *ennui* of an idle, hot day in a lonely bungalow, by reading a chapter of Doddridge's "Rise and Progress," or of James's "Anxious Inquirer?"

The country around answered ill to the descriptions which authors delight to give of India. But it would be well for readers of travels to remember that the popularity of a book depends far more on eloquence than accuracy. When looking on the tame flats and patches of brown copse about Streepermatoor, it was hard to believe that this was the Ind of history, fable, and song:—the country by whose transit-commerce the isolated Tyre rose to such fame; and "Tadmor in the wilderness," Solomon's "city of store," into that proud Palmyra which, though sand-girt and without territory, rivalled the first capitals of earth, subdued Mesopotamia, Syria, and Egypt, won from Gallienus the right to array its prince in imperial purple, and, under a woman's leadership, tried well the strength of Rome, though directed by the warlike Aurelian:—the country from whose surplus treasures Alexandria, Genoa, and Venice

derived their splendour;* whence Sheabeddin is said to have carried a booty of three thousand pounds weight of diamonds; and the monster, Thamas Kouli Khan, seventy millions sterling:†—and, above all, that this was the very Carnatic from the plunder of which the eunuch Kafoor returned to his ambitious master Alla, laden with a sum which even our own historians are not disposed to reduce below one hundred millions. But the tameness of one district, or the beauty of another, is never to be taken as the type of a great country. We do not judge of England either from the cheerless fens through which the southern Ouse loiters toward the sea, or from the exquisite pictures that adorn the progress of the Wharf. India, though, on the whole, much inferior to England in beauty of landscape, has many regions of exquisite attraction. But when looking on those pleasant spots, you cannot but remember that their beauty and their bounty are lost on those who enjoy them; that the eyes that look on their charms, and the hands that reap their produce, lay the thank-offering of this year before an idol, and to it look for the fruits of the next. This reflection breaks in on your enjoyment like a knell among merry voices, gratification yields to pensiveness, and the train of thought that began in a lively sense of the beautiful or the grand, ends in a mournful sympathy with the feeling that wrested from the dissimilar minds of the sceptic peer and the Christian bishop, when lingering on such scenes, the twin sentiments,—

* See Robertson's "Historical Disquisition concerning the Knowledge which the Ancients had of India."

† Orme's "Military Transactions of the British in India."

"All, save the spirit of man, is divine."
"Only man is vile."

When the heat of the day had passed, we started, two on horseback, and two in palankeen, two of the latter conveyances having been sent back to Madras. The road lay over a flat country, interspersed with groves. In these were multitudes of crows, who chattered and cawed just as they do at home; the sweeter voice of the dove mingled with their tuneless clamour; flitting among the trees were numbers of those beautiful little parroquets which abound in the country, whose plumage of sparkling green is a favourite simile with native poets; squirrels were gambolling nimbly and merrily in the boughs; crawling on the roots of the trees, or squatting on a stone, you would see, every now and then, an humble scion of "that most ancient family of quadrupeds," as Dr. Buckland calls the lizards; betraying, however, no consciousness of the ancestorial honours wherewith geological industry has enriched them from the heraldic records of "former worlds;" and, in physical proportions, woefully degenerated from the Megalosauri, the Iguanodons, and other distinguished founders of the "most ancient" house of Lacertæ, whose escutcheons still grace their former homes in the Oolitic and Wealden formations.

We passed a body of convicts working on the roads, guarded by peons, (native police,) and every man in chains. This is one of the most common punishments inflicted by our government for serious offences; and, to an English eye, the poor manacled wretches look sufficiently miserable. Yet the natives frequently complain that our administration of criminal law is too lenient,

and that our judges are excessively scrupulous about convicting, unless the evidence is complete in every part. A judge, in their estimation, ought to have some such facility in detecting a culprit by his very appearance, as Cuvier had in discovering, by a solitary bone, the genus to which an animal belonged. They think he ought not to wait servilely on the chain of evidence, which may be interrupted by the absence of a witness, or entangled by his dishonesty; but to use his own discretion, guided by the general aspect of the case. In cases of theft, they consider this procedure imperative. "Who," they have often said to me, "who ever heard of a man calling witnesses when he was going to steal? To elude observation is the very perfection of his art; and to punish him only when he suffers himself to be seen, or leaves traces by which he may be detected, looks very like punishing him not for being a thief, but for being a blunderer." All claims for justice to the accused they get over with great ease; and reject as purely mischievous the principle of English law, that it is better ninety-nine guilty persons should escape, than one innocent man suffer. "And then," they will say, "suppose a thief does blunder, so that evidence is found to bring guilt home, what do you do with him? Why, you just put him in a good house, set a guard before the door to see that nobody hurts him, give him rice twice a day, send him home not a pin the worse; and then call that punishing him! Pretty punishment for rogues that is!" They can no more sympathize with the feeling which looks on the loss of character and privation of liberty, as themselves constituting a severe punishment, (except to persons of family and repute,)

than a Turkish serf, viewing the comparative comfort in which Charles XII. lived in his retreat at Bender, could sympathize with the mighty dissatisfactions that stirred in the breast of the fallen hero. In cases of petty theft, their own laws award a fine as the punishment; but in graver ones, dreadful mutilation. Halhed's Gentoo Code informs us, that "if one steal a horse, excellent in all respects," his penalty is, that "the magistrate shall cut off his hand and foot and buttock, and deprive him of life." Whether correctly or not, they complain that petty theft increases under English rule; as also a certain domestic crime for which our code provides no commensurate punishment, and against which the executive do not choose to administer the severities prescribed by Menu.

The next evening we started with the intention of reaching Cauvery-Pauk; Mr. Crowther and Mr. Garrett being in palankeen, and Mr. Squarebridge and myself on horseback. Proceeding quietly along, with Mr. Crowther a few paces in front, we heard a crash, when down came the hindmost end of his palankeen on the road, the pole having broken off at the point of junction. The head-bearer, who was full six feet high, thin, dusky, and stooping, gazed down on the prostrate vehicle with as great consternation as a child on a broken plaything; and, lifting up his hands, cried *Rumbu barum*, "Plenty of weight;" while Mr. Crowther scrambled out upon the road, to learn the cause of his sudden arrest. The breaking of reins or traces, the loss of a horse-shoe or linchpin, are calamities in their way; but the breaking of a palankeen pole is to lose your axletree, and place your vehicle in utter help-

lessness. After several ineffectual attempts to repair the damage, the poor bearers, mounting the body of the palankeen on their shoulders, slowly proceeded to the next village. The inhabitants gathered round, and a multitude of things were said, but all unintelligible to me. At length came a venerable-looking old Mussulmaun, with broad turban, portly carriage, dark skin, and flowing white beard, who seemed to give decisive information to the effect, that neither carpenter nor wood was obtainable. Our only hope was Woocherry, a bungalow some miles in advance; so there was no alternative left but to carry the dismantled vehicle thither as best we could. The bearers cheerfully undertook this tedious task; but first demanded a bottle of arrac, a spirit commonly drunk in the country, and obtained by distillation from rice, sugar in its raw state, or toddy, as the juice of the cocoa-nut tree is called. Mr. Crowther had been provident enough to bring with him a spare pony; so that, in case of accidents, we might not be detained. But, on the present occasion, not apprehending any need for his services, he had been dispatched in advance. My pony was resigned to Mr. Crowther, while Mr. Squarebridge rode on to order back the other, and Mr. Garrett proceeded to the bungalow, to await our arrival. After a long walk, at the miserably slow pace made necessary by the awkward load on the bearers, the pony arrived, and I was again mounted.

Throughout the day the sky had been cloudless; its irradiated sapphire looking calmly joyous as the countenance of one who had long had peace with God. But, in advancing to the west, the sun flung other

beauties round him; and, as if conscious king of light, marched royally to his chamber, arrayed in purple suffused with gold. For the last few minutes he shone from behind a bank of dark and watery clouds, too dense to permit of his body appearing through; but exhibiting on their upper edge a fringe of thrice-burnished gold, that hung over the crags below with an effect singularly majestic. At the same time, a radiance streamed upwards from the invisible luminary, making one think of the first stream of celestial light greeting the ascending saint, ere yet the throne of presence has opened on his eye. The clouds rapidly mounted, and hung fiercely on the face of night. They grew black, dense, low, till the very air, as if fearful to stir in such a presence, hushed itself to perfect stillness. We entered a wood; every leaf stood motionless with the same awe. The gloom was fearful, the silence broken only by the bearers' hum. A flash gleamed across the sky: its light was still lingering on horse's mane and bearer's turban, on leafy mango and slender palm, when a peal crashed over us, so nigh, so loud, that it seemed the united voice of a hundred storms. Then the sound of abundance of rain rustled in the trees, followed by masses of crowded and ponderous drops, dashing headlong to slake earth's greedy thirst. Amidst this deluge, flash succeeded flash, and peal after peal roared fearfully; each of which was followed by a thicker rain; as if the gleam had been struck from chains that bound up the stores of Providence, and the thunder were the crash of that rending which set them free to enrich the earth. The horses shuddered and started; the bearers plodded on with a low, broken murmur; the branches

glowed in the almost continuous light, trembled with the thunder, and stooped beneath the rain. The whole scene vividly recalled the Psalmist's words: "He bowed the heavens and came down, and darkness was under his feet. He made darkness his secret place: his pavilion round about him were dark waters and thick clouds of the sky." In that august pavilion sat the power of the Supreme. The scowl of its brow, the gleam of its eye, the tones of its voice, were all furious as long-pent vengeance; and yet its mission was not wrath, but goodness; not to wither, but refresh. So it is in the ways of God: amid appearances that prove our nothingness, he mildly works our weal.

Well drenched and weary, we reached the bungalow at last. By the time a cup of coffee was prepared, a slumber had seized me that no persuasion could break, and from which I was released only by the broad light of day. In the mean time the palankeen had been set to rights, and we were ready to proceed. That morning we reached Cauvery-Pauk, which, though a small place, is celebrated as the scene of a night-battle, in which Clive gained an important victory over the French. Among the natives it is famous as the residence of learned *jotishas*, or "astronomers," who annually publish almanacs, that are in great repute even as far away as the western districts of the Mysore. In these, eclipses are accurately calculated; but they afford no other astronomical information of value. It is marvellous that, by any perversity, men can manage to combine the astuteness that distinguishes an educated Hindu, with belief in the monstrous absurdities which their sacred books teach respecting the heavenly bodies.

Being all considered as gods, the various phenomena which they exhibit are accounted for, not by laws that a presiding mind has impressed on passive matter, but by *myths* which seem equally to exhaust man's wits to invent, and his credulity to receive them. The sensible founder of Anglo-Indian history, Orme, tells us of "the sun getting his teeth knocked out, and the moon having her* face beat black and blue at a feast, at which the gods quarrel and fight with the spirit of a mob. They say the sun and moon carry in their faces, to this day, the marks of this broil." And thus the Galileos and Keplers of India have been saved the trouble of observation or conjecture as to the solar and lunar spots. Eclipses are accounted for in a way equally satisfactory. On one occasion Vishtnu was distributing the *amrita*, or "food of immortality," among the gods, when, two Asuras (the Titans of Hinduism) having obtained admittance in disguise, he ignorantly helped them to the precious repast. Surya and Chandra, (the sun and moon,) having discovered the fraud, apprized him of it by a wink, when he instantly beheaded the intruders: the bodies died; but the heads, having received the death-preventing *amrita*, were immortal, and obtained a place as planets in the sky. There they live; and, in the form of a red and black serpent, periodically seize on Surya and Chandra, by whose untimely disclosures they were prevented from acquiring perfect godship. The waxing and waning of the moon, again, is readily explained by the happy genius of Hinduism. On a certain occasion Chandra was so unhappy as to aggrieve

* He should have said "his;" for the moon is not a goddess, but a god, in Hindu mythology.

Datsha, the son of Brumha, who vented his fury in a curse. That curse brought a rust on the silver countenance of Chandra, which, by alternate increase and decrease, obscures or permits its radiance. The tides, again, which have so sorely puzzled western sages, have long been known in the East to depend on the heaving or contraction of that enormous turtle into which Vishtnu entered at the Kurma Avatara, when he descended into the sea, to recover the lost Vedas: thus showing that we have been all along mistaken in supposing that the most distinguished service in which tortoiseshell had ever been employed, was to cradle that illustrious renegade, Henry the Great. Nor are their notions of the permanent facts of astronomy less curious than those of its periodical phenomena. The river Ganges is considered as the earthly antitype of a celestial original. That heavenly Ganges is the Milky Way, which is placed nearer the earth than even the sun, to whom, however, the second place is assigned, and that at the distance of just half a million of miles. The moon is exactly twice as far off; then come the stars, and after them the planets, without any distinction between the inferior and superior ones, although Mercury, Venus, Mars, Jupiter, and Saturn are placed in their proper order. The suspicion that Earth is a member of this family, is not once entertained. Farthest off of all is the pole-star, who, however, is distant only seven and a half millions of miles. These are not regarded as the deductions of vulgar science; but as authoritative revelations on matters inaccessible to unaided research. It is true that they strangely contradict the results of the beautiful argument from parallax, on which we—who

are not favoured with more direct methods of computing celestial distances—are wont to look as about the choicest effort of man's reason, and which leads to the startling conclusion, that one of the "swift-winged arrows of light," though travelling in a second eight times the circumference of our globe, would spend three weary years on its flight to the nighest star; while to the one first calculated by Bessel, the journey would occupy ten.

As if conscious of parsimony in their celestial measurements, the Hindu philosophers are munificent in terrestrial dimensions. The earth, instead of the twenty-four thousand miles to which our astronomers reduce it, expands, under the warmth of Bramhanical fancy, to a spacious orb of one thousand and twenty-seven millions, having seven overgrown continents, each with an ocean to match. These oceans are different in composition as in dimensions from that which is familiar to our groveling researches: the first is of salt-water; the other six consist respectively of wine, sugar-cane juice, clarified butter, curds, milk, and fresh-water. In the centre of Jambu, the first of the seven continents, and the only one which exists elsewhere than in the Puranas, stands Mount Meru, not shaped as vulgar hills, but bearing the elegant form of a lotus. This mountain measures in height four hundred and twenty thousand miles, its circumference at the base two hundred and forty thousand, and at the top it spreads to double that extent.* To support this gigantic world, three different agencies are named,—a serpent, a turtle, and

* Vishtnu, Purâna, Wilson. In all these computations I take the *yojana* at five miles: it may be nine.

eight elephants. What relation these sustain to each other, which is higher or lower, how their different offices combine, I never could satisfactorily learn. The fact seems to be, that different writers have assigned the important duty of upholding the world to that animal which each has happened to regard with greatest favour.

When viewing the colossal nonsense whereby the Hindu sages have endeavoured to build up their claim to inspiration, it is impossible to resist a vivid impression that one has written of creation without being abandoned to his own conjectures. There is a book written by one educated in the first Egyptian schools, and consequently versant in their system of cosmogony; written for a people still sunk in the ignorance attendant on serfdom, and thus prepared to receive blindly any feasible speculations on subjects beyond their reach; written in a desert, where there were no schools to criticise, no enlightenment to detect errors, no rivals to expose them; written, in fine, under every imaginable temptation for the author to indulge his fancy, or display his learning. Yet while the advancing stream of knowledge has swept into the sea of fiction all other early records of creation, this one stands proudly amid the tides which fret against its borders, but bear not an atom away. The very torrents that have overwhelmed its counterfeits, flow around it an unfordable defence; while every tributary poured in from some new-sprung source of knowledge only swells the stream that would bear down an assailant. He who believes that any man, by his unaided foresight, could have chronicled creation's birth, in times when its system was grossly

misconceived, without assuming principles, and hazarding facts, which would be falsified by the discoveries of subsequent ages, not only displays a capacious credence, but forgets the character of all such chronicles but one.

But monstrous as are the chimeras of Hindu science, I have been as much laughed at for crediting the facts of our system, as we are disposed to laugh at them for entertaining the follies of their own. To say that the sun, which is so warm, is further off than the moon, which is so cold; that the world, which is so heavy, is "hung upon nothing;" that, though every one sees it to be flat, it is round; that, though a child may tell it is perfectly still, it is whirling both round its own axis and the sun; that an eclipse of the moon comes of her getting into the earth's shadow, which no one ever saw; that an eclipse of the sun comes of the other luminary wandering between him and us, when it is plainly farther off than he; and that the fixed stars are more than nineteen billions of miles distant; does appear an exhibition at once of boldness and imbecility not to be adequately scorned. They summarily dismiss all reasoning on our different methods of arriving at conclusions, by saying, "We trust the Shastras, which, as divine revelations, cannot err; you trust to instruments and calculations, which may easily mistake: our ground is sure, yours fallacious." We should entertain about the same opinion of him who should tell us he had just completed a survey of the moons of Uranus with chains and theodolites, as does the Bramhan of the European, who states that our astronomers can calculate the apparent size of the earth to an eye situated at the distance of the sun. The seven seas might be thought a weak point, as requiring no-

thing but travel to demonstrate their non-existence; but to all my objections about circumnavigators never seeing oceans of curds, butter, or toddy, they used coolly to reply, "That only proves that they have never gone beyond the sea of salt water." Of all phenomena, an annular eclipse of the sun enabled me to perplex them most, as they could not account for it on the serpent-seizing theory, and were constrained to admit, that its appearances were such as would naturally result from the combination of causes to which ours ascribes it. It is perfectly true, that if you teach a man science, you annihilate his faith in Hinduism. Astronomy is as dangerous to the Shastras as the Vatican once deemed it to the Bible. But it can never be taught by desultory argument: its proofs must be exhibited in series, and then conviction is inevitable. This, however, cannot be extensively afforded to the adult population. In dealing with them, my own experience utterly contradicts the opinion, that it is best to approach them first by exposures of the scientific blunders of the Shastras, and so destroy their confidence in these, the basis of their own religion, before advancing the truths of which you require their acceptance. The Shastras are equally assailable on moral as on scientific grounds; while in the one case your appeal is to the man's conscience, which decides for you; but in the other, is to facts he discredits, and to processes he can neither comprehend nor trust. The shortest way to his heart is to "reason of righteousness, temperance, and judgment to come," of the consequent need of pardon and sanctification, the impotency of his gods to bestow it, and Christ's glorious power to create anew.

But to return to Cauvery-Pauk, whence we have been beguiled by its astronomical fame: it has the advantage of a noble tank three miles broad and eight in length. Tanks are of two kinds, those which serve as public baths, and those constructed for the purpose of irrigation. The former are nothing more than gigantic wells, generally sunk to a great depth, with an upward opening, shaped like the hopper of a corn-mill, which, being lined on four sides with stone steps, affords an easy descent to the water. These are to be found near most towns, and every morning the respectable inhabitants, especially the Bramhans, may be seen crowding the steps, performing their ablutions, and the accompanying devotional exercises. The erection of these is considered an act pre-eminently meritorious. But should the projector be unhappy enough to fail in obtaining water, or to find it of an inferior quality, he remains for ever under the stigma of being frustrated in his attempts to acquire merit in the present birth, by some blot contracted in the last. They will not hear of mineral causes modifying the supply; and, as a triumphant proof that it is regulated only by the merit of the party seeking it, adduce instances in which two persons having dug on the opposite sides of the same road, the one obtained good water, the other bad. The merit, however, no way depends on their virtues in the present birth; for I remember a Bramhan naming a case in proof of his point, in which the parties being a polygar, and one of his favourite temple women, the latter was the successful candidate for "sweet water." This gave rise to the question, If she were superior in merit, how came it that the birth assigned her was not

only female, but that in disreputable circumstances; while the other, though less meritorious, obtained the male birth, and that in a position of honour? This was a difficulty which the worthy disputant had not seen, and could not solve. The tanks constructed for agricultural purposes are usually placed on the bed of some rivulet; a strong embankment being run across the line of its course, at a favourable place, sometimes to the length of one or two miles. In the rainy season, when the stream swells, this dam retains the water, which forms a lake of greater or less extent, according to the nature of the ground. Should the water overflow, arrangements are made to conduct it to another tank, perhaps several miles below. All the ground which the level will command is parcelled out into compartments of a few yards square, separated by low ridges of earth. Narrow channels run between every two rows of these compartments, having an inlet to each. These are supplied by a large duct connected with the tank. The rice, from the time of its sowing till on the point of shooting into ear, is kept in water about ankle deep. Great ingenuity is manifested in all these arrangements.

The irrigation of gardens and smaller plats of ground is provided for by other means. Close by a well stands a high pole, on the top of which another is fixed transversely, so as to play up and down. From one end of this depends a long bamboo rod, reaching to the water, with a leathern bag attached. A man mounts on the transverse spar, and, starting from its junction with the upright one, proceeds towards the extremity, like a seaman making for the yard-arm, only that he walks upon

the spar itself; which, pressed by his whole weight, sinks down, so raising the opposite end, and lifting the vessel out of the water, which, gaining the top, strikes against the edge, and empties its contents into a trough prepared to carry them over the ground. He then hastens back to the centre; the spar, relieved from the pressure, follows the weight of the bamboo and bag, which latter becomes instantly immersed and filled: thus he proceeds backwards and forwards, adroitly balancing himself on his dizzy footing. A less frequent, because more expensive, method is, to place two oxen with their backs to the well: a rope connected with a large vessel is passed over a revolving axle and attached to their traces. They being backed close to the edge, the vessel is immersed and filled, on which they are driven quickly forward, thus raising the vessel to the top, where it upsets, and channels are prepared to distribute the water. As these operations vividly recall, and at the same time illustrate, much of the beautiful imagery of Scripture, to observe them is peculiarly pleasing. Those who live under showery skies, little think how precious is water where whole months together are cloudless, and the earth is scorched by fierce red suns. Some one has truly said, "The luxuries of India are cold air and cold water, when we can get them." The people of India have only one fear,—a failure of water. Let but Providence vouchsafe that priceless essential, and all their necessities are met, all their labours productive. I remember, when there had been no rain for some three months, and when it was apprehended that a continuance of the drought for a few days longer would be fatal to the crops, seeing a

ryot clap his hands at the first drops of a shower; and as it descended richly, his satisfaction turned to joy,—

"Delight o'er all his features stole:"

with the glee of a child, he cried out, "It is just as if God had sent it!"

So far their estimate of water is natural and wise; but they carry it further than we should be disposed to go. Water is everything. If they think of settling in a new place, the first question will be, "What kind of water does it enjoy?" All the benefits we attribute to a change of air, they seek in a change of water. If healthy while resident in a strange neighbourhood, they celebrate the virtues of the water; if bilious, or feverish, or rheumatic, they lay all the blame on the water. The most common complaint of an invalid is, "The water disagrees with me." This is not to be wondered at when, according to their physiological system, it is water which, transmuted by internal processes, forms the blood, while its more refined particles sustain the respiration. And this is but a mild specimen of their attainments in that branch of science; flesh is formed from corn and vegetables: oleaginous food supplies bones, marrow, and the faculty of speech. The various emotions and physical states are regulated by certain sylvan exercises of the soul, which dwells in the region of the heart, where it is surrounded by sixteen leaves, each possessing a distinct property: as it flits around this pericardial bower, it alights on leaf after leaf, each change of perch being attended with a corresponding change of state. On one it sins, on another sleeps, a fourth transforms it to virtue, a fifth makes it wide

awake, and so on. These are not all the wonders of the Hindu heart; for out of it proceed no fewer than a hundred and one arteries, one of which, passing to the crown of the head, is of no small importance, as holy men are capable of elevating the life to that point, where it will remain during pleasure, without any aid from food.* These absurdities could not, of course, exist for a day were anatomy studied; but that science their religious prejudices induce them to regard with about the same feelings as we entertain towards cannibalism. The consequence is, they judge of our internal structure and operations on the most fanciful principles, and arrive at conclusions which, though highly serious as regards the treatment of disease, are so inimitably ridiculous, that to avoid laughter is impossible. I well remember one day my moonshi asked leave to go home sooner than usual, saying he was very bilious, and must take remedies. I asked him what medicine he used, and whether he had any confidence in its efficacy. He said, that as to its efficacy he had ample proof, but seemed rather reluctant to name it: when pressed, however, he told me it was an application he had often successfully adopted, and of admirable properties, as all skilful physicians knew; and that it was simply to cut an onion in two, and squeeze the juice into his eye.

After Cauvery-Pauk the next place of importance was Wallajanuggur, a town built by the Nabob Mohammed Ali Wallaja, called after him, and peopled from the neighbouring town of Laulpet. Those who have taken their impressions from certain writers, who repre-

* "Second Exposure of Hinduism, by Dr. Wilson, of Bombay."

sent every Hindu as an incarnation of idleness, would look with surprise on such a town as Wallajanuggur. The streets are beautifully clean, the houses white as purest snow, and in many cases ornamented with streaks of red. You have everywhere symptoms of stirring commerce and various manufacture. Well-dressed merchants, tidy artisans, shopmen in their bazaar, weavers dressing their warp, or plying their loom, in open air; numbers of females assisting in the various operations; all attest an active and well-employed population. Goldsmith's Auburn, or Campbell's Wyoming, could hardly exhibit greater cleanliness, industry, and comfort. It is, however, the most busy town in that part of the Carnatic; the spirit of its merchants having made it the *entrepôt* for the commerce between the Presidency and Mysore. The betel-nut, the produce of the beautifully tall and slender areka-palm, is a leading article of traffic, being chewed by every native. It is a powerful astringent, tasting somewhat like catechu.

But Wallajanuggur contained one object far more attractive to us than any we had met with on our way. Close by the town stood a neat bungalow, the residence of Mr. Bilderbeck, an excellent missionary of the London Society. He was, unhappily, from home, and thus we lost the pleasure of seeing him and learning his progress. On this mission residence the Christian traveller from Madras to Bangalore looks with mingled joy and dissatisfaction. Joy to see one place where the God he loves has an altar, and the Saviour who bought him a herald. But dissatisfaction, deep dissatisfaction and pain, to think that, though his road lies over two hundred miles of populous country, through the important

towns of Arcot, Vellore, Colar, and a multitude of smaller ones; near Arni, Amboordroog, and other places celebrated in the history of India; though our armies have marched every step of the way many a time; though every village abounds with tales of our prowess, and reposes under our sway;—yet, in the whole distance, this is the only place where you can find a man sent to instruct the people in our religion, and lead them to our God. You are met everywhere by proofs of the religious activity of the Mussulmauns during the short time that they held this part of the country, before western ambition snatched it from their hold; but look in vain for temples to attest that the people who rule it now know or regard a God. Is this wise, or guiltless?

Considerably after night we arrived at the far-famed city of Arcot. Robertson supposes this to be the place mentioned by Ptolemy as *Arcati-Regia;* but the identity is at least doubtful. There is reason to believe that no town existed on the present site till 1716, when the Moguls, driven from Gingee by its unhealthiness, encamped on the banks of the Palar, and built a town which speedily rose into note, and became the capital of their possessions in the Carnatic. In 1744, it witnessed one of those tragedies with which Mohammedan courts are so dreadfully familiar. The murdered nabob, Subder Ali, had left a son named Seid Mahomed, whom the nizam placed under the guardianship of his father's successor in office, promising that when of age the nabobship should be his own. His youth, parentage, misfortunes, and character, all conspired to make him a favourite with the people. He was celebrating the

nuptials of a relative with great pomp, and had invited his guardian, Anwar Addin, to attend; when he approached, the noble youth, to show all due respect, proceeded to the foot of the steps before his house, in order to receive him. Here a crowd had assembled, among whom were some patans formerly in his father's service. One of these advanced towards Seid Mahomed in an humble posture, as if to crave forgiveness for insolence he had lately shown, and, when sufficiently near, stabbed him to the heart. In an instant (to quote Orme) "a thousand swords and daggers were drawn;" the assassin sank under countless wounds, and several of his companions shared his lot. Suspicion instantly fell on Mortiz Ali, uncle to the victim, and the murderer of his father. The crowd rushed in search of him, determined to avenge the crime. He was found surrounded by a guard that defied attack, and proceeded to his fortress at Vellore unharmed, except by the malediction of a whole city.

It so happened that we were in Arcot on the anniversary of that event which is the most important of its history, as well as the first that, in the words of Morari Roa, taught the natives to "believe that the English could fight." In 1751 Chanda Saheb, the nabob supported by the French, had reduced his rival, whose pretensions our countrymen espoused, to the single post of Trichinopoly. He led an army to besiege this, leaving eleven hundred men to defend his capital. The English, seeing their last hope threatened, despatched a force against him. They encountered him, but ran away from the attack, even while the natives in their pay continued in action. Chanda Saheb pro-

ceeded triumphant, the English had become despicable, and everything portended their speedy extirpation. But on the 30th of August, the garrison of Arcot were astounded by intelligence, that a British force had been seen marching towards the city, with perfect steadiness, in the midst of a terrific thunder storm. This they took both as indicative of great courage, and as an omen favourable to their enterprise: they were awed accordingly. The next day two hundred Europeans and three hundred sepoys presented themselves before the capital of the Carnatic. The heart of the garrison failed: they quietly marched out of their stronghold; of which that handful of men took possession amidst the mute and wondering gaze of the inhabitants.

That bold band was led by a young clerk of limited education and unmanageable temper; who, at the time, according to his contemporary Orme, "had neither read books, nor conversed with men capable of giving him much instruction in the military art." Dupleix's perfidy at Madras turned against him and his schemes those prodigious passions which had sorely troubled Shropshire pedagogues and Indian merchants. Clive, disguised as a Mussulmaun, fled from the scene of the dishonoured treaty, reached Fort St. David, joined the military, displayed matchless bravery, and, up to this juncture, had alternated between battles and book-keeping. By the siege of Trichinopoly, he saw assailed the last stay of his country's interests. Roused himself, he succeeded in rousing the lethargic government; pointed out the seizure of Arcot as the only way to procure a diversion; offered to conduct the expedition; obtained five hundred men, under eight officers, of whom four

left the desk, while other two had never been in action; marched against a fortress manned by above double his numbers, and took possession without firing a shot. Property found, to the amount of half a million sterling, he restored to the owners; conciliated the people by moderation; repaired the fort, and provisioned it for a siege; made two successful sorties against the former garrison, which lingered in the neighbourhood; beat up their whole camp in a night attack; and, at a time when all his men but eighty were dispatched to a distance, repelled an assault made by them with the knowledge of his weakness. Raja Saheb, the son of Chanda, led against him four thousand men, who were joined by the remains of the garrison, and also one hundred and fifty French. They took possession of the town: Clive made a sally, and drove them from the street; but was compelled to retire to his fort. The next day, two thousand men, under Mortiz Ali, arrived, to reinforce Raja Saheb. They commenced a vigorous siege; but the feeling within was indomitable: Englishman and sepoy were equally inflamed by the spirit of their leader. Daring and skill so counterbalanced paltry numbers and wretched supplies, that it was fifty days before the beleaguering host were prepared to storm. At the end of that time, two wide breaches invited their advance. Raja Saheb sent to Clive a proposal of honourable terms and costly presents, if he would surrender, accompanied by severe threats in case of resistance. Little did he know the mind with which he had to deal. Danger awed Clive, just as darkness shrouds phosphorus; and to bend him by threats, was as likely as to chisel from granite a drapery of gauze.

His soul was unutterably proud, audacious, and inflammable ; but acute, self-possessed, and generous the while. At this juncture, his force was eighty Englishmen, and one hundred and twenty sepoys : the general who challenged him led a host of ten thousand. But the answer was, that "he had a better opinion of his prudence, than to believe that he would attempt to storm till he had got better soldiers than the rabble of which his army was composed." Such a spirit within a fort, is more terrible than a thousand men.

Even in times of peace, Mussulmaun breasts are stirred with mighty passions, by the anniversary of the day on which Hassein and Jassein were martyred. That day had come. Its memories fired the soldiery with tenfold hatred of the infidels ; while all whom the sword should release from life, during its holy hours, were secured instant reception to the realms of houri without purgatorial delays. *Bang*, freely distributed, added intoxication to bigotry. Then the fierce stream of fanaticism and inebriety was rolled against the weak defences. The gates and both breaches were simultaneously assailed. A steady fire made the elephants which led the attack on the gates recoil, treading down in their retreat the crowds that pressed behind them. The party attacking the breach, which lay across the wet ditch, were foiled by the effective play of a gun which Clive himself pointed. A mass that seemed resistless, mounted the other breach ; while a multitude coolly sat down below to replace them if they should fall. Not even at Badajoz was breach more effectively counterworked, or more bravely defended. The stormers ascended without receiving a shot, gained the first trench

that had been raised, and then were opened on by a fire close, ceaseless, and deadly. The front ranks of the defenders fired without intermission, being supplied from behind with charged muskets. Every shot slew, they fell in masses, were instantly replaced, their successors fell as they; while shells, cast from the ramparts, were spreading wide destruction and wider terror among the crowd seated below. For a whole hour they passed on to certain death, as doggedly as snow-flakes to the ocean. For a whole hour every man that advanced perished in that terrible fire. At length they faltered, wavered, and withdrew. Their brave leader was left among the slain. And heroic as were the deeds at Lutzen when Gustavus fell, none equalled that of a soldier, who returned beneath the wall to rescue the body of his commander. Forty muskets showered danger around him; but he flinched not, and bore away his generous burden unharmed. That night the siege was raised. Clive was reinforced the next day, pursued the enemy, defeated them at Arni, captured Conjeveram, and made the English arms respected; eventually, triumphant. Perhaps the historians of future ages may say, that the defence of Arcot bore the same relation to the Mohammedan power in the East, as the battle of Tours in the West; and that Charles Martel and Clive were the instruments of Providence in giving the check, at those extreme points, to the restless current by which that system of lust and bloodshed had overswept the nations; and in commencing the reflux by which we now see it falling back, with rapid subsidence, on the centre whence it originally sprang.

An instructive lesson is conveyed by the fate of those

who conducted the struggle for an European empire in India. Dupleix rose to splendid dignity; became arbiter of the Carnatic and Deccan; was courted by eastern kings, ennobled by his own; and then died the victim of disappointment and poverty. Labourdonnais found the reward of pre-eminent talents and services in the Bastile. Lally, after displaying bravery and zeal in the cause of his adopted country, was drawn through Paris in a dung-cart, to the guillotine.* Clive rose from an obscure clerkship to be governor of Bengal, a British peer, the boast of his country, the hero of his age; and, at the very moment when his sovereign was looking to the talents he wielded as the only hope of saving America, his life of victories, aggrandisement and fame was closed by suicide. Such is the bliss of greatness! The love of conquest, like Moore's Prophet, wears a veil of transcendent lustre, to shroud features of ineffable disgust. On that mask, poets and historians converge the rays of glory, till it dazzles, fascinates, inflames. But, ever and anon, such events as the suicide of Clive lift the veil, and discover lineaments far fouler than those which mar the less destructive, but less caparisoned furies, Pestilence and Famine. How different is his lot who toils under the same suns to turn men to God! His deeds rejoice the hosts who little reck of the battle's issue, but sing when a soul is saved. His name is written in letters bright as heaven's crystals, incorruptible as its light. His reward is God's approval upon earth; and when earth is burnt up, a crown flash-

* Voltaire states that he was imprisoned in the same cell of the Bastile where Labourdonnais had lain. *Fragm. Historique sur l'Inde.*

ing with the glories that beam from Deity unshrouded; a throne that even eternity cannot crumble, and which immortals whom his toil was the means of saving, will joyfully surround. Let the merchant tell his gold, the statesman sway his realm, the warrior trample on his foe; let the philosopher expound creation, the scholar elaborate his tome, the poet attune his lay; but let him that would have bliss for ever unshorn, go and win souls!

Arcot has no missionary; and, I believe, never had any.

"The next day," to quote Meir Hussein Ali Khan Kirmani, the admiring and devoted biographer of Hydur Ali,* "when the lion of the heavens at one leap or bound had scattered the starry host like a flock of sheep, and had risen from the East with his jaws and claws stained with blood;" that is, as we common-place occidentals should say, when the sun rose, we were urging our way to the celebrated fortress of Vellore. Hitherto the country had been monotonous flats; but at this point several hills started suddenly from the plain, looking like gigantic haycocks on a level meadow. Overlooked and partly embosomed by these eminences, lies the stronghold which, in the contests of the last century, was regarded as the key of the Carnatic. Turning round the base of a hill, the minarets and dome of a noble mosque rear themselves from the midst of a grove, with whose dark green foliage their forms of glistening white stand in bold and picturesque contrast. Passing a native town of no attractions, you

* History of Hydur Naik. Translated from the Persian by Colonel W. Miles.

find the citadel, so completely commanded by the hills, on which traces of once formidable works are still discernible, that a six-pounder will pitch a ball beyond it. The fortifications are of immense strength, and surrounded by a deep, wide ditch, in which, as an addition to the dangers of assault, a number of alligators are carefully kept and fed.

Vellore has full often been deluged with blood. Here its notorious commandant, Mortiz Ali, obtained the assassination of the nabob, while sleeping in imagined security as his kinsman's guest, during the festivities of the Mohurrun. Here also Hydur Ali pressed close sieges; and the place was twice relieved by Sir Eyre Coote, when reduced to extremities. Of the action which preceded the first relief, Meir Hussein gives the following characteristic account':—"The general left his ground, and advanced to an extensive plain. He had scarcely reached it, before the nawaub's cavalry, with horses as swift as the wind, attacked him on all sides; and, giving up all consideration either of their lives or those of others, surrounded the general's troops in close combat; and to what an extent did they not exert their valour? The nawaub himself, with his artillery, took up a position on a high ground on the general's route, and lighted up the fire of war in his front. On the right flank, the prince (Tipu) determined to imitate in his attack the battle of the Last Day; and a total dispersion of the troops, followers, and baggage of the rear-guard ensued; and, at one charge, thousands of men and women passed under the edge of the sword, perished by the arrow and musket-ball, or were put to flight. The officers of the musketeers, and

ahsham, or irregular foot, with the breath of the musket and rocket, lit up the fire of battle and slaughter, and many were uselessly burned, and many drowned in a river of their own blood. In fact, a great multitude of officers and men, on both sides, slept on the field of death. The army of the general in this action received a severe blow; a cannon-ball from one of the nawaub's guns having broken the leg of Colonel Stuart, and thereby caused the commander a deep affliction; but, more than this, another shot also struck the horse of Syfe ul Moolk, by which he, Syfe ul Moolk, was thrown on the ground, and his brave heart split in twain. In short, it went very near that the stone of defeat and dispersion would fall among the troops of the general, when gloomy night suddenly arrived, and cast a veil of darkness over the world, and closed the contest of the two fierce lions." He does not insinuate that a missile so awkward as "the stone of defeat" fell among the host of his own hero.

After the dynasty of Hydur had been hurled from the Mysore throne, Vellore became the scene of an atrocity which has ever since allied it with fearful associations. At the death of Tipŭ, his family, consisting of several sons and daughters, were removed to this fortress, where, indulged with a princely income and retinue, they lived far more in state than in captivity. Four of the princesses had been married; and amid the splendid festivities attending the nuptials of the fifth, closed the 9th of July, 1806. About three o'clock the next morning, the European troops, consisting of four companies of the 64th Regiment, were awakened by volleys of musketry crashing into their rooms. The

assailants were the sepoys of the garrison, who remained outside, pouring in a murderous fire, not daring to encounter the bayonets of the Englishmen by attempting an entrance. Two colonels, thirteen officers, and eighty-two men became their victims; ninety-one others were wounded. Some found shelter in nooks, where the shot could not reach them. A few managed to gain the ramparts, and maintained themselves by desperate valour. A fugitive carried the tidings to Arcot. The 19th Dragoons, under Colonel Gillespie, were in instant motion: the galloper-guns followed. By eight o'clock the Dragoons were at the gate, but could not effect an entrance. At ten the guns arrived: the gate was blown open, the troopers dashed upon the crowd within, cut them down by hundreds, and avenged the treachery with an unsparing hand.

It is not to be wondered at that the alarmists of the time should find the cause of this horrible catastrophe in a religious panic created by the labours of missionaries. But it is greatly to be regretted that, in the present day, a name so distinguished as that of Professor H. H. Wilson should be found giving its sanction to that opinion. Our regret, however, would be greatly moderated could we only make sure that every reader of his able volume* would carefully weigh the statements adduced by the learned professor in support of his allegation. Dr. Buchanan, writing after considerable inquiry, said, "That the insurrection had no connexion with the Christian religion, directly or indirectly, immediately or remotely, is a truth which is capable

* "The History of British India;" being a continuation of Mill.

of demonstration." This, with similar denials, Professor Wilson characterizes as "wide of the truth," and says, "The essential and main-spring of the mutiny was religious principle, although its occurrence was influenced, in the manner and season of its development, by incidental and local excitement." To sustain this statement, the following facts are brought forward:— "The sipahis (sepoys) were forbidden to appear on parade with ear-rings, or the coloured marks on the forehead and face significant of sectarial distinctions; and they were commanded to shave their beards, and trim their moustaches, according to a standard model . . . . . Other innovations in their dress and accoutrements, such as a particular undress jacket, black leather stocks, and a turnscrew which some susceptible minds had identified with a cross, had previously occasioned wide-spread dissatisfaction; and the last drop of the cup was poured forth, when a new pattern for a turban was devised, which, in the apprehension of the sipahis, resembled a hat. This confirmed their fears, and insubordination was the result." That insubordination was a demur to wear the new turban; on which their officers acted with great violence, and the commander-in-chief, to whom the matter was referred, dealt most severely with the offenders.

Now, this is really all that is said, and, we presume, all that can be said, to prove that the disaffection which occasioned the mutiny was the result of missions. These facts (for as such we cordially accept them) do prove that Buchanan used a loose expression, when he said the mutiny had no connexion with the *Christian religion*. It had a connexion with it; but that connexion was

simply this: the sepoys knew that the English were Christians; and identifying, as they do, costume with caste and religion, naturally looked on the innovations made with such reckless contempt of their feelings, as steps towards breaking their caste, and coercing them into the creed of their foreign masters. Harshness turned jealousy to rage, to which the presence of the captive princes gave point and direction. But what had the missionaries to do with all this? Was it they who told the Mussulmauns that the English were Christians, or who taught them to hate Christianity? The religious distrust was occasioned, not by missionaries, but by the simple fact that the English held a different creed from the sepoys. The feeling thus created was roused to exasperation by inconsiderate meddling with prejudices which, though silly as the whims of a child, are, to those who cherish them, sacred as the postulates of a mathematician. Suppose—which would have been far more reasonable in the climate—that the order had been for the British soldiery to adopt the dress of the sepoys; that they should shave the cranium as close as the chin; dismiss hats, and wrap up their heads in a mass of calico; and supersede their pantaloons by a long loose cloth of the same fabric; would they not have remonstrated? and, if treated as mutineers for such remonstrance, would they have been quite submissive, even without the aggravations of opposed religion, alien blood, recent conquest, and the presence of those who represented illustrious leaders of their own race and creed, to stimulate their disaffection, and point their revenge?

Surely the learned professor assigns causes for the

mutiny sufficient to satisfy any reasonable man, without seeking for it in the labours of the few Protestant missionaries, who were acting at a distance; and of whom, in all likelihood, most of the sepoys had never heard, for at the time there was no *English* missionary in the Madras Presidency, and the Danes and Germans were labouring at a great distance from Vellore. But he does not prove, or adduce a single fact going to prove, that the slightest connexion existed between the missions and the massacre. Had Buchanan only used the definite term, "missionary efforts," instead of the vague one, "the Christian religion," his position (for anything, at least, that Professor Wilson has shown) would have been unassailable; for to show that the mutiny arose from religious jealousy, is no proof that the jealousy was either created or developed by missions, in the absence of any fact indicative of such connexion; and when, independently of it, there were ample causes and bitter excitements. We may add, that though many of our intelligent countrymen have regarded with singular timidity every attempt to teach the Hindus the truths of their own profession, watching missions as a sailor watches a troubled sky; they have yet to prove a single case in which the proceedings of Protestant missionaries have begotten hostility to the British government. We cannot profess any sympathy with that style of feeling which regards all the fears of our Eastern rulers on this score as merely the expression of dislike to the progress of Christianity, and of desire to perpetuate the revenues so shamefully derived from idolatrous rites. The fears were genuine; produced, in minds where the love of truth was postponed to secular

expediency, partly by the representations of native officials, or of English ones who had adopted native vices, partly by confounding the effects that would result from their tolerating their own religion, with those that would spring from their promulging it. Any attempt to convert the Hindus by public interference, would be as pregnant with mischief to our politics, as it would be abortive of benefit to our religion. On such a course the body of Protestant missionaries could not look otherwise than with strong disapprobation. The religion they disseminate repudiates hollow adherents. It seeks not a new ceremonial, but a new heart; not a change of creed only, but a change of character. They feel this. Consequently, they desire to approach the strongholds of Hinduism with the one weapon of fair argument, wielded by vernacular addresses and publications; and thus to lead the people to a purer faith than that which their fathers taught; showing them, at the same time, that they are armed with no power to coerce or to reward; while, so far from seeking, they would dread, compulsory disciples. Now, we think that this mode of procedure, so far from being likely to excite jealousy of the government, is the only means of dissipating the suspicions naturally entertained respecting rulers of an alien religion, by giving just views of the spirit of Christianity, and of the relation in which the executive stands to its propagation. And in this conviction we confidently anticipate the concurrence of every one whose knowledge of the Hindus has been derived from a free intercourse with all classes of the community, at a distance from those difficulties to accurate views which are found in pundits, officials, and

the sophisticated natives of the Presidencies; who, being the ordinary channels of information, soon learn to impose all sorts of deceptions, which deceptions we sometimes find re-produced in clever books.

On no point can any people be more sensitive, than are the Hindus, to forcible interference with their caste and religious customs. Any course indicating a desire to violate these, would be the height of folly on the part of government. At the same time, no people can be more accessible to argument. Only address their reason, no matter how pointedly, or with what discredit of their most cherished dogmas, and they are never enraged, but seldom offended. On discovering that the people who rule them have a religion which can bear, and even court, comparison with their own, their first feeling is one rather of gratification than otherwise. When the missionary has succeeded in convincing them that he is no government officer, no fortune-seeking adventurer,—that his sole object is to promulge truth, and turn men from sin,—they freely accord him the respect due to a noble intention and an elevated character. Our authorities may rely upon this, that the more the natives see of Protestant missionaries, the less will they suspect any collusion between them and the government, with a design unfriendly to their religious freedom. With profound respect for Professor Wilson's pre-eminent accomplishments as an orientalist, we cannot but deplore that, in his office of historian, he has countenanced a habit of thinking little calculated to accelerate what must come, if truth and righteousness are not phantasms,—the extinction of Bramhanism, and with it the regeneration of those fair provinces of the

human kingdom, which that system of sublimated depravity has so long enthralled, polluted, and accursed.

After leaving Vellore, our next stages were Pallicondah and Goriattam. When at the latter place, on a subsequent visit, I found that the old sepoy attached to the bungalow, having served in the Mysore, had a slight blundering knowledge of Canarese, and asked him if any persons in the neighbourhood could speak it. He said, "Not one;" but, after a while, returned to tell me that there was a village of Canarese people at the distance of about a mile and a half. Finding that I intended to visit it, he offered to be my guide. Crossing the broad sandy bed of the river, which was almost free from water, we found a neat, sequestered village, situated by a grove which shaded a handsome temple. On entering a clean but narrow street, we found several respectable-looking men of the mercantile castes, seated outside the doors. They seemed not a little surprised by my appearance,—never, most probably, having been visited by a white man before; but when addressed in Canarese, they stared at one another as if I had been uttering thunder. Soon, however, recovering that easy self-possession in which a Hindu never fails, they entered cheerfully into conversation. I learned that they had been settled in this place nearly two hundred years; but still spoke their own language amongst themselves, although it was of no use to them elsewhere. This custom is maintained by all native families, no matter how far removed from their original country; and ought to satisfy those sanguine Anglicans who expect to make their mother-tongue the vernacular of Hindustan; if, indeed, satisfied they can be, who

hear in vain the perpetual jar of Irish, Welsh, Manx, and Gaelic, amidst the harmony of Anglo-Saxon vocables. Certain forms of pronunciation leading me to ask if they did not come from the Bellary district, they replied, "From its immediate neighbourhood." During this conversation a considerable number of men had assembled round me, while some women stood looking on in the distance, or came, and, casting a furtive glance on the pale-faced stranger, rapidly disappeared. I then opened my Bible, and read; explained why I had sought them out; entered into a statement of the great truths of religion; and enforced them with feelings which he only can tell who has found himself preaching Christ to an audience who never heard of his grace before, and who, likely, might never hear it preached again. It was a moment to make one in earnest. They listened with deep attention, and received some tracts with wonder and delight. I earnestly implored the blessing of the Holy Trinity on my feeble attempt to make Him known; and, after a cordial interchange of civilities, closed my interesting visit, heartily praying that, some other day, a messenger of the cross might find them the enlightened worshippers of the only wise God.

At Laulpet, our next stopping-place, we found a superb mausoleum, marking the resting-place of some distinguished Mohammedan. Here, also, eager vendors invite your attention to baskets of small, sweet oranges, brought from the adjacent gardens of Sautgur, a place formerly of great note; being, as Meir Hussein says, "one of the greatest fortresses in the Carnatic; and, like the seven heavens in strength and height, towers fearfully above all the rest." From this point the dark

outline of the Ghauts stretches before you. Several bluff hills are jutted out on the plain, as if redoubts of the great citadel. Along the base of the ridge runs a ravine, nearly dry in fine weather, but furious in times of rain. A serpentine road, cut out of the mountain, facilitates the ascent. A thick jungle covers the rugged and precipitous hills. As we proceeded, the sun shone cheerfully on the many-shaded foliage; birds of bright plumage glistened in his beams; squirrels careered in the trees with nimble glee; the bearers' song sounded musically among the echoes; a string of bullock-drawn bandies were slowly and laboriously toiling up the steep; and native sportsmen, with long, rude, fragile-looking matchlocks, were in pursuit of game. But, amidst the mingled grandeur and vivacity, one thing was wanting; no lark was chanting its matin; no note of linnet or thrush, of goldfinch or blackbird, sounded the Creator's bounty, or the creature's joy: of all the birds that flitted about you, not one had a voice to sing. It seemed as if idolatry had struck nature dumb.

I had climbed mountains before; but there was a strange sublimity in finding onesself on that wondrous ridge, which, rising in Kandeish, stretches to Coimbatore, and, there turning northward, travels back to Cuttack; thus extending, on both coasts of the peninsula, through a distance of latitude greater, on either side, than from Newcastle in the north of England, to Bourdeaux in the south of France. Yet all this may be considered as one huge mountain; for the wide area embraced in its sweep is not a hollow between two ranges, but stands upheld on the shoulders of these everlasting hills; so that countries of vast territory

and varied language are spread out in high air, one enormous mountain-top.

Entering the Indian continent on its apex, you find, a little above Cape Comorin, "a bluff granite peak, about two thousand feet high."* Commencing from this point, a chain of mountains extends northward through Travencore and Cochin, terminating a little below Cherpool Cherry. After a flat of about twenty miles, you are met by a huger ridge, called the Neilgherries, of which the highest peak towers eight thousand seven hundred and sixty feet above the sea. This giant stretches an arm of the same stern muscle as himself for about seven hundred miles along either coast, and holds aloft the wide regions encircled in their granitic embrace. These arms are called, respectively, the Eastern and Western Ghauts. Diverging, as they do, to a distance of several hundred miles, and meeting the traveller in directions exactly opposite, they might easily be regarded as separate chains; but are, in reality, one, and connected in the way suggested by this illustration. In their whole course, the only breaks of importance are one lying in a direct line between Seringapatam and Salem, through which the Cauvery descends from the table-land to the plain; the other at Naggery, above fifty miles from Madras, at which point the eastern range varies its direction. The tract on the two coasts lying between the Ghauts and the sea, is called by the Mussulmauns Payeen-Ghaut, or the foot of the Ghauts. On the east this includes the Carnatic, with the country

* See an able article on the geology of Southern India, in a number of the "Journal of the Royal Asiatic Society," by Captain Newbold.

known as the Northern Circars, and may be said to extend from the mouth of the Mahanuddy, to that of the Coleroon, a distance, in latitude, greater than the whole length of the British isles, or than the breadth of the European continent, taken from the Adriatic to the Baltic, or from the Gulf of Genoa to the mouth of the Rhine. These countries are flat, with "a sandy soil, resting on a bed of black clay, embedding marine shells,"* and thinly interspersed with detached hills of granitic rock. The breadth of this tract varies from a few miles, as between Ganjam and Chicacole, to a hundred or upwards, as towards its southern extremity. The western Payeen-Ghaut includes Canara, the Portuguese territory of Goa, the state of Sawunt Warree, (which has recently been disturbed,) the Concan as far north as Damaun, with part of the Guickwar territory. This, in some parts, is only a strip of land at the foot of the mountains; but, in others, acquires a breadth exceeding fifty miles. The table-land comprises, in its enormous plateau, the Mysore, the Ceded Districts, the South Mahratta country, and the Deccan. The whole of this has an inclination from west to east; the Western Ghauts having an average height double that of the Eastern, the intermediate region gradually slopes from the one level to the other, like the roof of a hothouse. This arrangement of Providence confers on the flat, sandy countries of the eastern Payeen Ghaut the benefit of a copious irrigation, by means of those noble rivers (as the Godavery, Krishtna, and Coleroon) which are formed by the drainage of the elevated regions; while the narrow tracts of the western are provided for by the

* Newbold, *ut supra*.

greater height of their adjacent Ghauts, and other peculiarities of surface. The elevation varies at different points of the plateau: at Hyderabad it is one thousand eight hundred feet above the level of the sea; at Bangalore, three thousand. Captain Newbold describes the table-land of the Mysore as "hypogene schists;" that of the Ceded Districts as similar; and that of the Deccan as presenting, in some cases, overlying trap,—in others, blue, grey, and buff limestone, with extensive tracts of granite and hypogene rocks, penetrated by trap-dykes, and partially covered with regur.

With all respect for the geologists, it does tax one's faith in the power of their "incandescent elements," to stand on the summit of the Ghauts, spread your thoughts over the wide regions they sustain, think of the kingdoms, the capitals, the tens of millions held up on the top of this mammoth mountain, and then ascribe its elevation to the activity of forces within the earth. The mind is disposed to refer this stupendous phenomenon to a direct exertion of the Creator's power. At the same time, we must own that His hand is seen most conspicuously in the endowment of agents evidently incapable of self-production or self-control, with the ability to accomplish magnificent results. In the powers of fire, light, and electricity, we have glorious proofs of what God can do; and who can trace the services in which he employs those mighty, but mindless, things, without asking, To what style of achievement may he not yet conduct the spirit of man, which daily demonstrates its superiority to them by making them all its instruments? The man who discovers and exhibits the servants whom our Maker has been pleased to employ,

helps me to adore more humbly his eternal power and Godhead; as also to take conceptions of the possible attainments of my own soul, which more impress me with the responsibility of its possession, with the need to be sedulous in its culture. His industry deserves, and has, my gratitude. But if he descant on the wonders of agents which, after all, have neither will nor judgment, no, not the knowledge of their own existence, without rising higher, he forces me to think of a mechanic who would account for all the marvels of the factory, the telegraph, or the calculating-machine, by referring you to the engine-room, the battery, or the framework, without one allusion to an inventive or presiding mind. Light is at this moment rejoicing every eye in a hundred nations; but it knows it not; it has no share in the vivacity which it bestows on living things; no sense of the beauty wherewith it decks the inanimate. It is well to ponder the laws under which nature operates. But laws never make themselves.

It was a touching and a mournful thing, as, full of such reflections, we pressed upon the giant hill, to see the bearers ground their palankeen, produce some cocoanuts, turn aside to a small temple, and there reverently present them to a miserable little image, as an offering to propitiate his favour on their way. The surrounding witnesses to the Creator's glory, and the idol's impotence, were so numerous and so plain-spoken, that this act made one feel he belonged to a race degraded indeed. The stock's nothingness was inscribed on all you looked at. The mountains, swelling with a majesty it never wore; the light, glowing with a radiance it never gave; the vegetation, springing with a life it had long since

lost; the parroquet, clad with a loveliness it could neither give nor prize; the squirrel, gamboling with a vivacity it could not share; the very fruit, lying as its offering, and rich with nutriment it could not impart, could not even derive; all, all lifted up their voice, and witnessed against the madness, the wickedness of man. To see the Almighty insulted so, amid the stupendous monuments of his power; and to think that, inane, loathsome, as was the deed, yet half the millions of our race would not blush to join in it; awoke within, a strife of shame, indignation, and pity, that tore the very heart. O Lord God, holy and true, how long? How long will rational beings affront thy Godhead? How long will men, lost, contemn their Creator, and adore his creatures? Earth and heaven answer, "How can they call on Him of whom they have not heard? And how can they hear without a preacher?" Oh where is the youth with soul so earthy, that would rather spend his days in gathering money, than in calling the cities of heathendom to behold their God? And where is the mother who would not thankfully devote her first-born to a work so holy? And where is the man who would rather reserve his thousands to tempt his children when he is dead, than send them to bless his species while he lives?

At the head of the pass stands the bungalow of Naikenary, surrounded by copse and low hills, without anything to indicate that, close by, an extensive country is spread out on a level many hundreds of feet below you. A change of temperature is at once perceptible. The sun shines just as fiercely; but the air is not so heated, and at night has a bracing coolness, not wholly

lost even in May, at which season the night atmosphere of the Payeen Ghaut is so languid, and sudorific, that you are not surprised the author of the *Jymani* (a celebrated native poem) should, in one of his fancies, put the question, "If the wind should grow so warm that he began to perspire, who would be found to fan him?" One is much struck to find the sheep on the top of the Ghauts having a covering of wool; far short of the luxurious garment of a Southdown or Leicester, but quite sufficient to afford the inhabitants material wherewith to manufacture *camblies*, ("camlet,") which the cold incident to their elevated situation renders desirable, and which they weave in long pieces, like Scotch plaids, and use generally as a night-covering; but in the cold season, do not disdain its comfort even in the day. This provision is forcibly illustrative of God's paternal care, when you remember that, within two or three hours' walk, on the plains below, sheep are browsing with precisely the same kind of hide as the calf or foal beside them; because there, even in December, woollen clothing would be only an incumbrance. The same attention to our happiness which leads the All-giving to ordain, that various climates shall produce each the most suitable kind of sustenance, is equally manifest in the distribution of material for covering: the delicate silk, and cotton, so admirably suited to the regions of balmy airs, we find to flourish there; the substantial wool, so well adapted to the changing heats of the temperate zone, is in that zone profuse; while for the furs, that protect from extreme cold, we travel to the realms of snow.

Just about the Ghauts, the language changes from

Tamul to Teloogoo: this latter continues to near Hooscottah, where the Canarese begins. These three languages have a strong affinity, but are not to be regarded as dialects of the same tongue. The Canarese and Teloogoo use a similar alphabet, but are as distinct as French and English. Only, the sensible usage of having a letter for every elemental sound, and of writing every word as it is pronounced, greatly facilitates the acquisition of one when the other is known. The Tamul alphabet is perfectly different, not having a single letter the same, nor even the numeral signs, which in European languages are common; while its letters in number are only between two and three hundred, whereas in the Canarese they are nearly seven. Persons used only to the parsimonious alphabets of the West take alarm at this host of letters, regarding it as a useless and embarrassing multiplicity. But it is the most convenient arrangement of which orthography admits. In English the learner is deluded into the belief that there are five vowels, and then is rebuked, not five nor fifty times, for pronouncing each of them just as he had been taught to pronounce it half a minute before. Every time he meets with the vowel A, it has to be considered whether he will pronounce it like itself, as in "bacon;" or like E, as in "many;" or short, as in "man;" or long, as in "mar;" or broad, as in "all;" or something else: and thus the time lost, and the labour demanded, are incomparably greater than if, in the first instance, he had been required to learn a separate letter for every separate sound. In Canarese, the vowels are sixteen; the consonants thirty-three. Every consonant adopts sixteen changes of form, each

expressing its combination with a certain vowel. Thus five hundred and twenty-eight compound letters are really syllables, which, though they facilitate the writing of the language, yet, by multiplying the forms, increase the tediousness and, consequently, the expense of printing. This is the only inconvenience of the extended alphabet; and it is a serious one. But it arises not from securing to each elemental sound a distinct sign, but from the syllabic combinations. To the natives our alphabet seems exquisitely absurd. They think its framers must have been of remarkably barren invention, when they could afford only two dozen signs for all the varieties of sound which language employs. They complain bitterly, and no wonder, of the miserable uncertainty entailed upon them as to whether they are pronouncing a word right or wrong. The boys in one of our Ceylon mission-schools archly called the letter A "the lying letter," saying that it so constantly changed, they could never trust it. The Canarese alphabet affords four, to take the several posts, on all of which, and some others to boot, we compel this one overworked vowel to do duty. Would the chemical student deem his task lightened, if, instead of having to learn a name for each of the fifty-four elements, he were obliged to use the sound *sodium* equally for the one it now indicates, and for *zinc*, *azote*, and *chlorine*, leaving the context to determine which was meant? Or would the juvenile musician be assisted by having semibreves, minims, and quavers all expressed by one sign, memory or judgment deciding the particular application? Or would the master of ten workmen diminish his trouble were he to get three John Joneses, three

John Smiths, and three Thomas Browns, rather than learn ten separate names? Yet such is the principle on which all the sounds of our copious tongue are compelled to find expression, through the stinted and impoverished medium of the Roman alphabet.

A certain lively writer gives the following description of Tamul:—"This Tamul is a fearfully ugly language; clattering, twittering, chirping, sputtering, like a whole poultry-yard let loose upon one, and not a singing-bird, not a melodious sound, among them." This is far more likely to be read and remembered than the sober descriptions of those who are guilty of weighing words. It is, however, mere humorous rattle, a playful way of venting the annoyance so natural when hearing a thousand things said that you cannot understand, and when perplexed in attempts to learn what you are told is very easy. I never spoke Tamul, and understood it but very imperfectly; but feel no hesitation in saying, that were one who knew nothing of it, or English, or French, to hear the three languages well spoken, he would at least hesitate as to whether the palm of euphony were not due to the "poultry-yard let loose." Teloogoo is remarkable for soft, agreeable sounds, and is popularly called "the Italian of India." Canarese, on the other hand, abounds in rugged combinations of mutes and aspirates, which give it a character of force and harshness.* But though defective in melody, its grammatical structure has a beautiful philosophical sim-

* I am aware that in this statement I differ from the Rev. W. Campbell, who, in his work, "British India," &c., characterises Canarese as "mellifluous in its sounds." It is capable of softness; but that is not its characteristic.

plicity; while, as a vehicle of knowledge and emotion, it is admirable. Wealthy in native resources, and abundantly replenished from the exhaustless Sanscrit, it is copious, definitive, and nervous; equally competent to express the boldest passion, or the softest sympathy; the tale of history, the flights of song, the refinements of metaphysics, or the high and spiritual discourses of theology. For the discussion of physical science, it will require a liberal invention of technicalities.

The Canarese is spoken all over the Mysore, in the provinces of Canara, and a considerable portion of the Ceded Districts. The population using it is variously estimated by Europeans at from ten to fifteen millions. The natives state it higher; but they are poor authorities. Up to a quarter of a century ago, every book in this many-tongued language was a heathen one. No volume kindled the fancy of youth, or beguiled the tedium of age, but stultified the intellects with drivelling idolatry, and polluted the soul by foul and disgusting recitals. A dark awe comes over one, to think of a tongue spoken by civilized and populous nations, continually uttering men's cares, agitations, and joys; as continually instilling doctrines, principles, facts; but dumb, wholly and for ages dumb, as to any sanctifying truth, any saving message. Blessed be God, that, with the Canarese, it is so no longer! It is eloquent now with every truth of that religion which is rich enough in holiness to make even a Hindu pure; rich enough in love to melt the chains of centuries, and fuse all castes into brotherhood; rich enough in consolation to heal the countless sorrows that follow strange gods. In

1820 the Rev. John Hands, of the London Missionary Society, printed the New Testament at Bellary, and, twelve years after, the Old. I cannot utter, nor yet repress, the veneration with which such a boon to mankind inspires me. He that benefits his species is greater than he that pleases or astounds them. But to be the benefactor of millions, and that to the end of time, is a dignity conferred on few. Let others pay their honours where they will: the profoundest reverence, the liveliest thanks I may offer to creature, shall be reserved from genius, grandeur, heroism, but cheerfully rendered to him by whose godly toil a wide-spoken tongue is first made to utter the words whereby my Redeemer may be known, my fellow-sinners may be saved. The deed is too vast for the chronicles of earth, too pure for the praise of men. Every letter of its record will be a regenerated soul; every stone of its testimonial a redeemed family; every note of its pæan an angel's joy. He who can pursue the sunbeams, and trace, without one omission, every lineament of beauty they pencil on tree, and flower, and living thing, may tell the blessings that accrue when the light of life is flung on the pathway of millions, whom the darkness bewildered and destroyed.

It is strikingly characteristic of the two systems, that, while Protestantism has enriched the various tongues of India by versions of the holy Scriptures, and is rapidly adding the boon of a pure literature, Romanism found sacred tomes in the custody of the native churches, which would have been valuable both to the biblical critic and the ecclesiastical historian; but she consigned them to the flames by the hands of her infamous

Archbishop Menezes; who, with the soul both of an Inquisitor and a Goth, was not content to inflict wrongs on the Syrian Christians which associate his memory with that of Pizzaro and Cortes, but must consummate his barbarism by burning documents, whose antiquity and sacred character, while they would have commanded veneration everywhere else, only served him as a stronger motive to remove such undesirable impediments to the assumptions of his church. Of his proceeding a full detail may be found in the Rev. James Hough's "History of Christianity in India;" while a succinct and interesting summary is given in the second edition of the Rev. E. Hoole's "Mission in Madras, Mysore, and South India."

The second stage from Naikenary was Baitmungalum, which lies within the Mysore boundary. Here one of our horses having lost a shoe, we had the opportunity of seeing the operations of a native blacksmith. He came with ready-made horse-shoes, hammers, fuel, anvil, and bellows, all contained in one very portable bundle. The fuel was charcoal, and the anvil tiny, with a spike by which he drove it into the ground. But the bellows were the most elaborate and ingenious implement in his whole workshop. The pipe was an iron tube, about one inch in diameter; after a few inches it branched into two, each of which terminated in the corner of a leather bag, where it was tightly tied. These bags were open at the top. The operator, placing the pipe under the fuel, sat him quietly down, and took the top of a bag in either hand. Thin slips of wood ran along the edges to enable him to open and close them more readily. Spreading his right hand to

its full extent, and raising it at the same time, he both opened and stretched the bag held by it, which, consequently, filled with air. He then closed his hand firmly, and, pressing down the bag, forced the air contained in it to escape through the pipe below. The left hand then performed the same duty; and the two plying in regular alternation, sustained a blast sufficient for his purpose. When the shoe was heated, he shaped it on his tiny anvil, still sitting on the ground; his easy quiet presenting a strange contrast to the sturdy manipulations of our Vulcans at home. This habit of sitting at work gives the Hindus an air of laziness to English eyes. The bricklayer sits to build, the stonecutter sits to chisel, the reaper sits to reap, the potter sits to turn his wheel, and, from all appearances, the ploughman would sit to plough, but that the erect posture is more convenient for walking. It is usual, during the growth of the rice, to rear a kind of platform to watch it against the crows; and there you may see a poor boy squatted, for hours together, under a sun hot enough to scorch the board he sits on; and yet he takes it as patiently as though he were a portion of the wood.

Here, also, we saw part of the process of preparing chunam. The lime, (generally made of shells,) after being slacked, is sifted again and again through thin cloth. A woman takes a quantity of this, and, sitting down with a small pot of water and two stones, one flat, the other round, places a little lime on the flat stone, moistens it, and then rolls it with the other till she thinks it impossible that the minutest particle can have escaped. Then it is mixed with the white of eggs, and also, I have been told, with sugar, after which the

pounding is repeated. The plaster thus produced, when carefully polished, has a surface singularly smooth, and of a whiteness not so soft, but more intense, than the finest Italian marble. Erections which have received the highest chunam finish, afford, in the massive purity of glistening white, a species of architectural beauty not to be found in Europe. The interior of some churches at Madras look as if the plastic hand of some giant modeller had shaped the whole from one Parian rock, without vein or joining. This majestic unity is far more impressive than the agglomeration of gilding, painting, sculpture, white marbles, coloured marbles, balustrades, colonnades, angels and emperors, saints and crusaders, which decks that paragon of magnificent bad taste, the Madeleine at Paris.

Our next stage led us to Colar, at the entrance of which two stately minarets, glistening in the morning sun, and gracefully contrasting with the dark foliage of a surrounding grove, indicated the spot where the remains of that wonderful man, Hydur Ali, had been interred.* Of low extraction, utterly uneducated, and spending up to his twenty-seventh year in idleness, he managed to subvert the throne of Mysore, conquered several adjacent countries, maintained long contests with "the stormy and warlike English," as Meir Hussein terms us, ravaged all their territory, annihilated a division of their army, eclipsed the glories of the hero of Buxar, and dictated peace almost at the gates of Madras. His bravery, enterprise, decision, and foresight will bear comparison with those of Napoleon. His power of giving simultaneous attention to several con-

* Afterwards removed to Seringapatam.

cerns exceeded that even of Cæsar. Yet he never could read or write, his greatest literary attainment being the ability to shape one letter, which he appended to official documents, as his sign-manual; and even this is called by his laudatory biographer the result of "much labour." This ignorance, doubtless, whetted the suspiciousness that ever curses a tyrant. Never were countries ruled with a more coarse and relentless despotism, than those that fell beneath his sword. The tales of his cruelty that circulate among the villages of Mysore chill the blood, even at this distance of time. His desires were large, and he lived for himself. The pleasures of conquest, of wealth, and of the hareem, moved his soul with resistless impulsion. In their way, the faith of treaties, the rights of property, the sanctity of homes, were but gossamer. He lived in battles and in marches. His appearance in any neighbourhood was a portent of woe to all who had aught to lose. The wealthy were commanded to produce their long-kept treasure: reluctance was ruin. Those who had beautiful daughters saw them torn away to swell his hareem, or amuse his favourites. Woe to him who murmured, no matter how deep his wrongs! The ears of the tyrant were everywhere; his spies numberless, and unknown. The silence of Russia, on a topic inhibited by the Czar, is not more perfect than was that of the dominions of Hydur on his oppressions. In ruling men he used but one instrument,—terror, pure and unmasked. The faith of his ministers, the integrity of his zemindars, the zeal of his spies, the punctuality of his horse-dealers, the very courage of his troops in

the charge, were all secured by terror.* The faithful Meir Hussein, though asserting that "he was altogether full of kindness and generosity," quietly admits that "the backs and sides of his negligent and extortionate servants were frequently softened by stripes of the whip;" an emollient to which he was very partial: while the author of the Ahwali Hydur hesitates not to say, that "cutting off the nose and ears of any person in his territories was the commonest thing imaginable; and killing a man there was thought no more of than treading on an ant." The account of his death is very characteristic; and, to those who look on a dying man with Christian eyes, very sad. "On the last day of the Mohurrun il Huram," says Meir Hussein, (page 471,) "he asked his attendants what was the date of the month:† they replied, 'This is the last day of the month Zi Huj, and to-night is the first of the Mohurrun.' He then directed that water should be made ready for him to bathe; and although the physician objected to his bathing, they turned him out of the tent, and the nawaub bathed. Then, having put on clean clothes, he repeated some prayer or invocation on his fingers, rubbing his face, and at the same time despatched two thousand horse to plunder and ravage

* "When, stimulated and forced on by the abuse he gave them, the horse had charged the enemy, he sent for the *sanises* ('grooms' or 'horse-keepers') of the cavalry, and, giving them bamboos or shoes, he placed them in line, himself taking post in rear of the whole, and giving orders to them to strike and beat any who retreated." (Colonel Myles's Translation of the Ahwali Hydur.)

† He knew that he was dying, having been suffering for some time with a cancerous affection.

the country of the Polygers, north of Arkat; and five thousand horse towards Madras for the same purpose, and to alarm the people there. He next sent for some of his officers, and gave them strict orders for the regulation of their departments, and afterwards swallowed a little broth, and laid [lay] down to rest. The same night his ever-victorious spirit took its flight to paradise."

Such were the last deeds of a man who possessed talents equal to any that the history of wars has developed; while, in character, he combined the darkest features of the tyrant, the libertine, and the lover of pelf. Who would die under the curses of a whole nation? But the last moments of a hero are seldom enviable. No one would covet Alexander's end. Cæsar had for his dying thought a biting sense of ingratitude and friendlessness. William the Conqueror died with tormenting recollections of the "many robberies" he had committed, and his corpse lay rifled and exposed on the floor for hours.* The proudest hero of our navies, when he felt himself smitten by death, cried, "What will Lady Hamilton say?" thus giving the last thought of his great spirit to one whose disgustful life should have made a common informer blush to name her. Happy, happy, happy he, lowly or illustrious, who in the final call can recognise the voice of Him whom he sought in his youth, and served in his prime!

Our journey was now drawing to a close. In India the incidents of travel are few. The roads are anything but crowded. You see now and then a string of bullock-carts; a sepoy on furlough, with native complexion

* See Pictorial History of France.

and English attire; a peon, with sword and tiger-skin belt; a barber sitting under a tree, and performing the monthly tonsure on the heads and chins of patient-looking victims; a dram-seller in a shed, with bottle and glass of English manufacture, and native vessels for toddy; or a religious mendicant ringing his gong, sounding his shell, or bawling out the names of his god. By a village at sunrise you are sure to meet, issuing out, a multitude of cows and buffaloes, which are driven within the walls every night for greater security. The cows are generally small and ill fed; but the bullocks, being well cared for on account of their value as beasts of draught and burden, are fine animals, with a broad flowing dewlap, and large solid crest on the shoulder, shaped not unlike a cock's comb, but without the scalloping. Of all animals the buffalo is least indebted to beauty. The hide is a dull, dingy blue, without hair; the head long, poking, and horizontal; the gait shambling and lazy; the look ineffably stupid. You are ready to imagine it an ill-shapen cow, clothed in soiled slate, and feeling about as comfortable in mail as the "man of brass" at the lord mayor's show. Occasionally, on an ox, with decorated horns and necklace of sounding bells, rides by a country gentleman, with bright garments, rich turban, and expansive slippers; who looks, as country gentlemen sometimes do, as if he were *somebody*, in his own neighbourhood. Then you meet a family, the father walking before, silent and haughty, the mother coming behind, silent and craven, with a child slung at her back, and a bundle, containing their household goods, on her head. They go on and on in dead silence, with as little sign

of mutual feeling as the fore and main masts of a ship. For miles together the husband maintains his dogged silence, the wife her humble distance. Sometimes you see a pompous, swelling Mussulmaun, followed by a pony supporting a white pyramid, which, when near, is discovered to be a lady in a muslin bastile, with only a small aperture at the eye for her to peep through. Such poets as Mr. Monckton Milnes may commend the atrocities of the hareem by singing,—

> " Within the gay kiosk reclined,
> Above the scent of lemon groves,
> Where bubbling fountains kiss the wind,
> And birds make music to their loves,
> She leads a kind of faëry life,
> In sisterhood of fruits and flowers,
> Unconscious of the outward strife,
> That wears the palpitating hours."

As if a human breast were to be freed from cares by lemon-scents, fruits, flowers, and bubbles, when those very things come to her in an isolation which remind her of her own, and show in their very form that she is not allowed to wander in fields where their beauties flourish, or trace the stream whose waters are free; but that, with Jealousy for her judge, and Contempt for her jailor, she is captured and caged, a perpetual prisoner, for the crime of being a woman; and that, too, by the man whose children she has borne! Let those who choose read and admire such elegant inanities. For our own part, we honestly say, that they who could look on such a monument to man's depravity and woman's degradation, as is afforded by a Mohammedan lady in her itinerant prison, and recollect that her hu-

miliation and wrongs are shared by the women of many a nation, without being heart-stung, deserve, if men, such affection as tyranny fosters, such peace as jealousy brings; if women, could such women be,—

> "If women, to Turkish serails let them speed,
> And be mothers of Mussulmaun slaves."

Painful reflections arose in looking back on the way we had passed. It is much frequented by our countrymen; but the spiritual interests of the population lying along it are sadly overlooked. Villages, towns, cities, are slumbering in undisturbed idolatry. They worship gods of wood and stone; no one points them to a greater. They seek purity by torture and ablution; no one tells them of the fountain that is opened for sin. It is sad—and sad with shades of awe and sorrow not easily depicted—to pass, one after another, through places where thousands dwell, and think of their children, all imbibing errors that will vitiate their life, and curse their eternity; of their daughters, whose birth, instead of being hailed as a father's joy, is endured as fate's decree, who learn no letters, aspire not to equal companionship, but live and die in ignorance and contempt; of their mothers, who never share their husband's board, and seldom see his smile; of their widows, whose bereavement is looked on not as a sorrow to attract pity, but as a curse to mark them for execration; of their orphan girls, sold to the temple and infamy; and, saddest of all, of their old men, in whose eye no hope kindles as they bow down to the grave. He that knows the heart of a missionary, knows what anguish these reflections bring; but anguish is not all: ever

and anon will stir within him an impetuous indignation at the supineness by which fields thus opened by Providence are left untilled; and the mind grows bewildered with questions as to what shall be the final award of Christian men, who, aware of the world's state, prefer laying up for themselves treasures on earth, to making millions rich for ever.

At Hooscottah, the last stage from Bangalore, we were delighted to find Mr. Cryer and Mr. Jenkins waiting to receive us. After a happy day spent in their society, we started early in the afternoon. About an hour after night, hedgerows skirting the broad, regular roads, English-looking gates, lights shining from between clumps of trees, the white fronts of houses glistening in the brilliant moonlight, and the stir of buggies hurrying hither and thither, told us that the merciful care of our heavenly Father had conducted us to the English capital of the Mysore.

CHAPTER IV.

BANGALORE.

The first Sight—Martial appearances—Tamul Towns—The Metropolis of Monkeys—The wonderful Ape—The Sun in Captivity—All Life is the same—Gods many—The Pettah—The Bazaar—Bankers, Drapers, Grocers, &c.—Wares—The Welcome—Our Brethren—Labours and Fruits—The three Tongues—Piety among the English—The Tamul Work—The tried Converts—The Canares Work—The sunrise Service—The outdoor Audience—The Orphan School—The Native Book—The Boy and the Book—A strange Christian—My Moonshi—History of Bangalore—Improved Muster Roll—Corruptions—The Revolution—A good Change—Plainness and Dignity—The open Door.

The first object morning presented to our view, was that which is always beautiful; but doubly so in a land of idols. Surrounded by heathen dwellings, the house of God is welcome as a water-spring in the desert. Just before the mission-house at Bangalore, stands a chapel capable of accommodating about three hundred persons, substantial and neat. It is situated in the very centre of the cantonment, on a spot more eligible for the English and Tamul communities than any in the place. A large part of the cost of its erection was defrayed by the liberal contributions of the resident European gentry, many of whom are ready with their aid in every good work. A native gentleman, who had acquired great wealth, and received a highly honourable title from Lord William Bentinck, when Governor-General, handsomely forwarded £100 towards the ex-

pense of the building, accompanied by a letter to the missionaries, in which he begged their acceptance of this sum as a token of his respect, and especially of his gratitude for the benefits derived by his grandson, who had been educated in one of their schools.

In front of the chapel stretches an open esplanade more than a mile long, and of considerable breadth. Each of its sides is skirted by an avenue of trees, with a fine broad road. Along the right-hand road extends a series of barracks, capable of accommodating a regiment of European cavalry, one of infantry, and two of sepoys. The opposite road is lined with compounds, as the garden-plots in which houses stand are invariably called; a large building for assembly-rooms terminating the row at one end, and a spacious English church adorning the other. At the head of the esplanade is seen the residence of General Cubbon, the Chief of the Commission for governing the Mysore territory, who, in connexion with his colleagues, has administered that responsible trust in a manner honourable to the English name, and advantageous to the country. Branching from this centre, roads run in every direction, pleasantly skirted by compounds, each with its smiling bungalow, and not a few bearing marks of horticultural taste. At a short distance on one side a regiment of native cavalry is quartered, on the border of a smooth lake; while in a different direction you come upon the post of a large body of artillery, horse and foot, English and native; each of these places forming an agreeable extension of the military lines. The martial air of the place strikes you at once. Your eye is constantly falling on a military figure. In the early morning you have in one

direction the brilliant manœuvring of the hussars: in another a regiment of sepoys, like an assembly of bronze statues, in red coats, turned into a huge automaton, and performing rapid evolutions at the will of a mounted operator: in another a squadron of brown lads in dark trousers and white jackets, doing drill at the word of a sepoy serjeant, who is educating them in soldiership; that, when of proper age, they may be drafted into regiments not as awkward recruits, but as veterans in tactics, if not in campaign. On the left you hear the angry artillery, practising its thunders on mock mud-forts; and on the other hand, the volleying of musketry from some sham-fight or regiment in exercise. Then, during the day, look where you will, into church, drawing-room, street, carriage, or palankeen, you are almost sure to see either the scarlet of the line, the blue of the artillery, the glitter of the hussar, or the bright sky-colour of the native horse. In the evening everybody is abroad, most of the carriages being drawn by a pair of well-conditioned bullocks. At this time the sparkle of military costume, combined with the richness of the foliage, the beauty of the sky, groups of natives, palankeens, and an occasional train of elephants, gives a romantic air to Bangalore. The faces, too, look more English than those that are paled or browned by the fiercer heats of Madras: you often see a child looking rosy and merry, which is hardly ever the case below the Ghauts. But the endless recurrence of war-dresses brings no pleasing thoughts of the struggles through which the country has toiled to its present peace, and of the seeming distance of that day when men shall learn war no more. At the same time it is delightful to feel

that under many a military coat, beats a heart wherein the love of Christ has implanted those principles, which, when generally diffused, will make "peace to spring out of the earth, and righteousness to look down from heaven."

Close around this beautiful assemblage of European dwellings, the Tamul population are congregated in clusters of houses, some of which, as Alasoor, the Chuli, and the Great Bazaar, swell into considerable towns. This is what first meets the eye as Bangalore, and what many of the residents regard as such, treating the Pettah (the real Bangalore) as a mere appendage, which they seldom see, some of them never. "A lady" states that, on proposing to visit it, she was dissuaded from the step on the ground that it was "quite native;"* the very reason that one would have thought would command interest. All we have been describing is merely the creation of the English, the clumps of Hindu dwellings interspersing the cantonment being tenanted by foreigners, who have come from the Tamul country in quest of the trade and employment incident to the presence of a large European force. It is a singular fact, that, though the English have held the place for nearly half a century, you scarcely find a single Mysorean among their *menial* servants; but, if employed at all, it is as gardener, bearer, or wet-nurse. The other offices are filled by Tamul people, or Mussulmauns. The Mysore having been far less accustomed to foreign intercourse, and less broken by foreign conquest than the countries on the coast, its people are more shy of domestic connexion

* Letters from Madras.

with strangers, and maintain a more independent bearing.

Bangalore itself lies above two miles from the military centre, and is, on that side, completely hidden by a dense *tope*, (grove,) which stretches round it, and is penetrated at different points by roads leading to the gates. This grove is a perfect metropolis of monkeys. They swarm in thousands, chasing each other on the roads, capering on the hedges, chattering on the boughs, and grinning hungrily at every one who passes with any eatable. They are a constant pest to every housewife in the town, discovering unsuspected passages to their stores, forestalling the meal, and making hasty retreat. A native fable, in illustrating the danger of mischievous companions, tells of a man who took a journey, accompanied by his monkey and his goat, taking with him rice and curds for a refreshment by the way. Arrived at a tank, he resolved to bathe and dine. Laying down the bundle with the provisions, he tied the two animals to a bush, and went down to the tank. No sooner had he disappeared than the monkey took the bundle, untied it, disposed of the good things, and then wiping his hands on the beard of the goat, so as to leave plenty of marks, sat down solemnly at the other side of the tree. The poor goat suffered the beating due to her arch companion. The endless gambols of the monkeys would afford amusement, but that idolatry invests them with an unnatural and repulsive importance. They are the representatives of a delusion that darkens countless souls. Their impunity in mischief is not granted by the indifference of those they infest; but is guaranteed by their own sacredness, a

sacredness that would entail on one who killed them all the odium of murder, and which often brings to their ridiculous presence a man performing his *namaskara*, (sign of religious veneration,) or presenting his offering. All over the country you find temples to Hanamunta, a monkey; and before those wretched images you see the child and the grandfather bowing.

The Râmayana, one of the Purânas, gives this account of the origin of monkey-worship. In the Tritha Yuga, Vishtnu, (the preserver of all worlds,) under disguise of her husband, succeeded in seducing the beautiful and virtuous wife of Salantankasura. On discovering her dishonour, she pronounced on him a curse to the effect, that he should become a man, have his wife stolen by giants, and rescue her with an army of monkeys. In consequence of this curse, a part of Vishtnu became incarnate as Râma. At the same time Anjana Davi, (wife of the wind,) had a monkey son, whom she called Hanamunta. He was an *avatâra* (incarnation) of part of Shiva, the destroyer. Râma married Seeti, who had been originally born from the pure sound of the Veda. She was carried away from her husband by Râvanna, a giant king of Ceylon. Eacus, when in trouble, obtained help by having ants elevated into armies; but Râma was assisted in his distress by all the gods incarnating as monkeys. Hanamunta became his general, and, as the host was approaching Ceylon, undertook a mission to the island, discovered the prison of Seeti, cheered her by the prospect of deliverance, received a token of her constancy to Râma, and when bearing it back was seized by the giants, and dragged before their king. They set fire to his tail as

a punishment; but, dashing through meadows, corn-fields, stack-yards, and dwelling-houses, he spread general conflagration, until, chased into the tower of a temple, he threw it down on his pursuers, and then extinguishing his tail in the sea, returned triumphant. The army, interrupted by the strait which separates Ceylon from the mainland, seize on mountains, and hurl them into the sea till a bridge is formed. Terrible conflicts ensue. Râma's host is nearly destroyed. A council of war is held: one sage declares that an herb is growing on the Himâlaya, which, if applied before the next sunrise, will restore both dead and wounded. Hanamunta offers to procure it. Three leaps carry him over the fifteen hundred miles that intervene. After spending hours in a vain search, he despairs of finding the herb in time; so he shakes the mountain, starts it from its base, heaves it on his shoulders, and, with this *credible* burden, hastens back. On his way he sees the east reddening, and fearful lest the sun, rising before his arrival, should nullify the virtue of the herb, speeds to meet him, bows low, represents the pressure of the case, and craves half an hour's delay. The proud day-king denies him abruptly. But the captor of the Himâlaya is not to be daunted. He mounts the car of Surya, seizes him by the hair, drags him from his seat, gathers him under his arm, and, thus doubly freighted, completes his journey. The specific is found, the army restored, and the giants vanquished.

Such are the recitals which millions of our fellow-subjects devoutly read as revelations from God! But it is not supposable that this rhodomontade is the real origin of that reverence for the monkey race, which

has for ages possessed the soul of whole nations. The doctrine of metempsychosis is the natural source of all the varieties of animal worship. "All life is the same," is the great axiom of that monstrous theory. The mo men a man assents to this dogma, nature is metamorphosed, all animation equalized, and a countless brotherhood surrounds him. "All life is the same." To him the same soul that beams forth from the human countenance, glares in the serpent's eye, speaks in the tiger's howl, guides the march of the ant, and the trunk of the elephant; animates the wing of the fire-fly, the beak of the vulture, the horse's limb, the scorpion's claw; and all that crawl, or swim, or fly, or reason, differ only in the form under which the kindred spirits are at present housed. This amuses the Englishman as unadulterated absurdity. To the Hindu it is ponderous and overwhelming truth. It makes every form he sees one of mystery. For aught he knows, the horse he rides, the dog he beats, the worm he crushes, may have been, not long ago, a poet, an orator, a priest! The parrot he teaches to chatter may be the man from whom he learned letters; the son whose birth he hails may be the ant his own foot trampled; the lamb that is yeaned to him to-day may be the child he buried yesterday! He looks on the lizard that crosses his path, without any means of conjecturing which has been greater in past history, it or he, or for which the better lot is in reserve! He may yet be a lizard, the lizard may yet be a king! Mohammedanism, incapable of seeing indications of soul except in the gleam of the sword which woman wields not, denies it to one half of the human species. Hinduism, prodigal of that which

it cannot appreciate, lavishes it on every emmet. The Mohammedan despises his wife as a perishable toy; the Hindu reveres his cow as a rightful equal. This is amusing as a theory, but calamitous as a creed. It rives from the human mind every dignity of birthright or hope, and reduces it to timid fellowship with "fowls of the air, and four-footed beasts, and creeping things." Everything that loiters in the dust, or nibbles in the pool, is its equal. "All life is the same." It fears all, worships most. Low as the curse-smitten serpent wriggles, man bows lower, and calls the reptile God! It is a bitter sight to see.

It is natural that those who hold this doctrine should regard the monkey tribe as embodying their forefathers; a notion which must beget a reverence soon passing to adoration. But it is not to be supposed that the Hindus pay to animals, or even to subordinate gods, what some reasoners on worship delight to call "divine honours;" that is, adore them as supreme. Idolatry never imagines a plurality of supremes. Its principle is that the executive of the universe is vested in the hands of "lords many," to whom we should look not as each the supreme, but either as His deputies, each acting in a certain province, or as the friends of man possessing a certain degree of influence, and willing to exert it on his behalf. Its sin does not consist in multiplying supremes; but in interposing between the Supreme and his servants, beings avowedly inferior; as if His power were too much taxed to meet every claim, or His goodness too lethargic to act without prompting. Its blasphemy consists not in avowing a second Almighty; but in raising many to a virtual equality as to knowledge

and presence, and to a superiority as to grace. The moment any being is declared a suitable object of universal prayer, he is assumed to be not only omnipresent, but omniscient; for a million souls may be each pouring into his ear a different prayer, at the same moment. Then if he is moved by a feebler petition than would move the Supreme, he outdoes Him in the attribute of goodness. The true test of divinity is being to all men the legitimate object of prayer. He who holds these to be many, may, as does the Hindu, attempt to cover his sin by distinctions; but the sin is upon him. He who owns many objects of universal prayer, owns many gods.

On the inner edge of the grove whose vivacious tenantry have called forth these remarks, you have the mud wall of the town. Within the gate a scene opens, strongly contrasting with the broad avenues, the military groups, the intermingling of lawns, gardens and villas, which grace the adjoining cantonment. Here you have a native town in all its perfection. To conceive rightly of this, it is necessary to dismiss all the red bricks, grey stones, drab stucco, storied houses, windows, balconies, slates, pavements, and lamp-posts, which so naturally introduce themselves with the idea of a town, as if they were essential to it. There is none of them here. You see a long, moderately narrow street, with houses of one low story, flat-roofed, whitewashed, and windowless. Parallel with them runs a thinly-planted avenue of cocoa-nut trees. Monkeys countless are scrambling up the side-walls, playing antics on the roof, bounding from the houses to the trees, and peering everywhere in search of plunder. The street is

thronged with turbaned men, some fully clad in shining white, the majority bare from the waist up, some with flowing beard, some with simple moustache, and some with every hair shaved to the very eyebrow. There are numbers of women, some bearing waterpots, some baskets of fruit; some having a child seated on the hip with its face against the mother's side, and supported by her arm; beautifully illustrating the prophetic expression, "Daughters shall be nursed at thy side." Occasionally a widow steals through the crowd in her miserable dress of pale yellow, looking as if under the feeling that she had no right to live, or to obtrude herself on a world from which her religion would have cast her, had not the kind hand of British Christianity interposed.

On turning into the bazaar, if you have allowed your expectations to be formed by the descriptions which travellers in Persia give of the structures found in that country, your disappointment will be woeful. Instead of the grand buildings and glittering display which would suit your Eastern notions, there is the same long, narrow, low street, differing only in this,—that the houses are not built up in front, but open in the fashion of a coach-house. Indeed, you can hardly form a better idea of an Indian bazaar, than to imagine a street of small, doorless coach-houses, parted by whitewashed mud walls, and roofed with red or black tiles. The only dissimilarity is, that the floor of the shop is raised above the level of the street, and the cross-beam sustaining the roof supported from below by two bamboos. The front is often without any protection, the owner withdrawing the goods at night into his house, which

communicates with the shop by a door from behind. In many cases, however, a piece of wicker-work, as large as the whole front, is hinged on the beam which supports the roof, and, being let down at night, forms a covering, which is secured by a lock of construction and workmanship far behind Chubb's detector. During the day it is lifted up, and forms a projecting shade.

On the floor of one of these shops you see the banker seated, with a few small bags about him, scales to weigh coins, and a stone whereby to test gold. Of this precious metal he tells you there are sixteen qualities, each of which his stone instantly detects. All he judges trustworthy may borrow at various rates of interest; the most equitable in the esteem of the people being what they call one per cent.; that is, per month, or twelve per cent. per year. They say, if a man is not willing to give one rupee to have a hundred for a whole month, he cannot be in great need, and has no business to borrow. A great many of the merchants trade on capital entirely fictitious, Few families are found who are not in one way or other suffering under the curse of usury. The banker is money-changer also, not giving rupees for a single pagoda, or annas for a single rupee, without his deduction. Perhaps next door to him sits the draper, surrounded by a few rude shelves, covered with pieces of silk and cotton cloth. His stock offers no great variety. One set of pieces is dresses for women, another for men, another turbans, another handkerchiefs; and these, with perhaps a piece or two of English goods, complete his store. The endless variety of articles which a cold climate and changeful fashions have introduced into Europe are unknown

where the breezes are kindly, and a man is content to dress like his grandfather. Then the grocer has a host of spices, for curry-powder, piled up in rough round baskets, with sugars varying from a whiteness almost equal to flour, to a dark hard substance like dirty glue. A variety of grain is also displayed. They enumerate nine kinds, several of which, however, are properly pulse. Rice is generally spoken of as the universal food of India; but in many districts it is comparatively little used. In the Mysore, raagi (*cynosurus corocanus*) is the general food. It is a round seed, of reddish brown colour, and much smaller than millet. It is ground, made into a sort of thick pudding, rolled up between the hands into long quids, which are dipped into a condiment formed of several spices, and swallowed by efforts that none can make who has not had the benefit of an early training. They regard it as a far more substantial food than rice, speaking with no measured contempt of the imbecile frames of those who eat only the latter. It is as difficult of digestion as rice is easy. "Sir," said a youth to me one day, in extolling his country's food, as would a Scot bannocks, "Sir, an hour after a meal of rice, you feel as if you had eaten nothing; it is melted and gone: but, after a meal of raagi, it is just as if a cannon-ball had sat down in your stomach; it stands by you the livelong day." Yet all who can afford it, eat rice once a day. Raagi requires no artificial irrigation, and is capable of being preserved, when buried in a hole dug in the ground, for five years or more; I have been told, for ten. The people of Mysore say they have food enough buried in their fields to serve for a year, even if the crops should

fail; but that, when a scarcity occurs, the people from below the Ghauts flock to them, and "eat them up." Then you have the fruiterer, and the goldsmith, and the coppersmith, whose wares consist of pots, lamps, toys, and gods. Of these latter you may buy several for a few pence; for the image is of no account until it has been duly transubstantiated by a priest: after that no price will win it from a really devout Hindu. It stirs one's spirit within him, to see a man buying a waterpot and a god from the same stall. The bazaars of Bangalore give ample testimony to the prevalence of idol-worship; and, at the same time, indicate a rude state of commerce, as compared with the superb temples of traffic at home. The tradespeople themselves look active and respectable. Close by the town is the fort, containing a considerable number of inhabitants. In it Tipu's palace is still standing; but is now used for government offices.

It is difficult to ascertain the population of the place. I have heard intelligent natives state it at from half a lac to two lacs; that is, from fifty to two hundred thousand. The best-informed Europeans estimate it at from sixty to eighty thousand. Now, let any Christian living in a considerable town conceive the place to be suddenly changed. In the morning you walk out, and find a low building, in which is a rude image of a bull. Before that image a white-headed man, with his staff in his hand, "for very age," is casting himself prostrate. You ask him why. He replies, "It is God." A little further on, in a similar building, stands a cast of a human form, not larger than a child's plaything: before it fathers are bowing, and teaching their children to

bow. You ask why. They say, "It is God." The men that meet you carry small silver boxes on their chests. You ask, "What are these?" They say, "It is God." Every man, woman, child you see, has a lie in his right hand. They are calling stocks, birds, beasts, reptiles,—God. Think how shame, that men should be so foolish, and horror that they should be so wicked, would sting you to the soul; think how you would call on the God they were forsaking, to save them from their darkness; think how you would throw into that prayer all the pang of a calamity, all the vigour of a rescue: and then judge how the soul of a good man mourns as he threads his way through multitudes, each one of whom bears on his forehead marks that he knows not Him whom to know is life eternal!

On the morning after our arrival, we received a visit from the Rev. Messrs. Hands and Rice, of the London Missionary Society, who were about to hold their annual missionary meeting the same evening. They hailed with joy the arrival of more labourers in their wide, neglected field. The venerable Mr. Hands referred, with touching gratitude, to the advances made by the cause of God since he landed, thirty years before. At that time a missionary was as welcome in India as a preacher of freedom in Carolina. The government saw plots, mutinies, insurrections, all kinds of political disorders attending the man who would attempt to break the long repose of superstition in Hindostan. Mr. Hands' arrival caused no small stir. He was cited before the authorities more than once. They cautiously resolved to remove so dangerous a visitor from shores they had *taboued* to idolatry, and to send him back

whither he had come. The influence of an excellent chaplain saved them from doing themselves that disgrace. But things were altered now; the country was wide before us; the authorities favourable, the people attentive; and all the facilities that Providence could furnish, were inviting us to preach the Gospel to every creature. At that time an European professing religion was as rare as a white Negro; now they were to be found in every little community. "What," said Mr. Hands, "What hath God wrought!"

That evening, in the beautiful chapel of the London Missionary Society, was held a numerous meeting, characterized by spiritual feeling, and high confidence in the victory of the Gospel over the giant errors with which it is grappling. One most pleasing feature of the meeting was, the truly Christian co-operation of some gentlemen connected with the government,—men representing a class once unknown in India, but now, happily, numerous, who combine all the qualities of valuable public officers, with piety based on a scriptural conversion, and manifested by open and consistent acknowledgment of God.

Our brethren of the London Society have the honour of being the first Protestant missionaries who sought out the millions whose tongue is the Canarese. In 1810, Mr. Hands opened the mission at Bellary. It has been prosecuted with admirable zeal. Good men have fallen; others have been forced to retire shattered: but their toils have not been in vain. At Bellary they have gathered a native church, numbering about sixty. In the surrounding districts a wide spread has been given to Christian light, and no small influence exerted

on the people, tending to the abrogation of Hinduism, and the acceptance of the holy faith. They have also translated the entire Scriptures, issued a number of valuable publications, and prepared a copious lexicon of the language: thus both placing the word of God within reach of the people, and providing greater facilities for every successor in the field. Many a time, when my heart has been "hot within me," either from impatience for the ability to preach freely, or from joy in the assurance that God would make the truth I was uttering to effect something towards the regeneration of India, have I invoked a blessing on Mr. Hands and Mr. Reeve, by whose toilsome years of translation and lexicography the difficulties of mastering the language had been so greatly liquidated. In Bangalore they have a handsome and spacious chapel in the cantonment, with a smaller one in the pettah, as the town is called.* Their native church numbers upwards of fifty. Mr. Crisp is at the head of a seminary designed for the training of native agents. They have also day, Sabbath, and infant schools. Their female schools contain above fifty girls, *all the children of caste parents.* In the schools of the Wesleyan mission are above seventy girls; thus in Bangalore more than a hundred Hindu females are under Christian instruction,—a circumstance both delightful and surprising to those who know the prejudices universally entertained, by the natives, against female education. The evil power that reared those munitions of iniquity with which the social code of India everywhere abounds, contrived that edu-

* The term "pettah" is used with regard to every town with a fort attached, and distinguishes the town from the fort.

cation should be allowed to no female but such as would use it to grace impure attractions. For ages, female education and female infamy have been associated in the mind of every Hindu. This has been a law of entail securing to every family in the land an inalienable heritage of narrowness of mind and obdurate prejudice. Every man born in all the nations of India has been doomed to be the son of a mother studiously consigned to unmitigated ignorance. Every breach in this system is a high joy to those who long for the day when the sons of India and her daughters shall rejoice together in light.

Of the commencement of the Wesleyan mission in Bangalore, Mr. Hoole, who was one of its founders, has given a full account in his work. As our brethren had learned the Tamul, and found in Bangalore a population using that language quite sufficient to engage all their attention, and were too few to detach any of their number for a new sphere, many years passed before they were able to include the Canarese people in their labours. During the residence of Mr. England a chapel was built, which stood until shortly before our arrival, when Mr. Cryer had it taken down to make way for the more spacious one now occupying the same site. Two of our brethren had been appointed to Calcutta. After a short time that post was, unhappily, abandoned. Mr. Hodson, one of the withdrawn missionaries, was sent to Bangalore. He directed his attention to the Canarese; and, by urgent representations to our home-committee, prevailed upon them to undertake operations in that language. And since that time our work has proceeded in three separate departments,—English,

Tamul, and Canarese. In each of these languages the Gospel is preached, the sacraments administered, Christian publications diffused, and schools maintained.

For English services we have three places,—the large chapel, a very small one close by the fort, and one extremely small in the cavalry lines. In the last service is held one night in the week; and in both the others once on the Sabbath, and once in the week. There are also class and prayer meetings. The congregations are good, and highly interesting. They are composed, almost exclusively, of officers and soldiers, with their families. In that far land many a prodigal, on whom warnings had been wasted at home, has come to his right mind, and with astonishment found himself received in his Father's mercy. Many whose souls dwelt in darkness while the day of English Christianity was glowing around them, have here, in the very shadow of death, seen a great light. It is most touching to mark the joyful wonder of a man who, amid Christian privileges, had lived as a heathen, but amidst heathen darkness finds his God. I once or twice met an English class, composed mainly of soldiers, and was delighted by their simple experience of the Saviour's love, and their warm devotion to his service. The fruit of our English labours has been highly encouraging; and yet young ministers at home will, perhaps, be surprised to learn that, of all departments of their work, the missionaries are least attached to this. For though in such a land the soul is glad to commune with those who have learned the will of God from youth, the wants of the natives are so crying, and the joy of meeting those wants so pure, that I found our brethren, without ex-

ception, to prefer that, above every other work. This is their great calling: the English duties they regard as extra. But they are constrained to sustain them by the conviction that it would be wrong to leave undone anything they can effect for the spiritual welfare of our own countrymen, and also that the labour bestowed on them tends to facilitate the conversion of the heathen by presenting to their view more attractive examples of Christian life. The London Mission has also English services, and the garrison has two chaplains appointed by government. The effect of these agencies on the English community at Bangalore has been truly blessed. In that community at present, may be found a large amount of scriptural piety. The experience of many hearts, and the life of both individuals and families, is such as to elicit the warmest gratitude to God from any who rejoices in the spread of Christ's kingdom.

The Tamul department presents much interest and encouragement. Beside the large chapel, there are several preaching-places in the bazaars. The aspect of the congregation on the Sabbath is beautifully clean, and reverent. I heard many mention with delight the impression made upon their minds at the watch-night service, at the close of the year 1840, on which occasion Mr. Hardey assembled the members of the native church at the same time with their English brethren. During my visits to Bangalore, I was greatly pleased to see candidates for baptism coming regularly to the mission-house, that they might receive instruction. Nathaniel, the native assistant, was a man of decided piety, and active zeal. He had been converted from a family purely heathen; but the blessing of God had so

attended his example and his arguments, that they were, one by one, becoming partakers of like precious faith. Many instances have arisen in which the converts have withstood opposition such as none have ever to encounter in a Christian land. One case is mentioned by Mr. Hardey, in which a man and his wife, after baptism, were assailed by their relatives with vexatious opposition. They were firm; but, in the heat of the strife, one of their children was seized with convulsive fits, and died. The heartless relations exulted, declaring that they had influenced the devil to kill the child, as a punishment for their apostasy. The poor mother was overcome by grief and conflict: her reason fled. The man lost his employment. But while stung to the soul by the death of his child, the frenzies of his wife, the failure of his subsistence, and the restless assaults of his kinsfolk, he "did not," to use Mr. Hardey's own words, "waver for a moment;" but, standing still in his faith, he saw the salvation of God. His wife was perfectly restored, his employment recovered, and his trials ended in peace. In another case a Christian mother had a prodigal son, who had forsaken his home. She heard that he was at Vellore. She had other children, over whom she watched with motherly tenderness; but her heart yearned after the prodigal: he was her first-born. She determined to make the long journey, hoping that his mother's presence would melt him, and that she should win her son. She stated her intention to Mr. Hardey, who reminded her of the claims of her other children, of how faint was the prospect of success, and of the hardships attending such a journey on foot. "He is my son, my child still, and I must go," was

the mother's reply. She went, she found the prodigal; but her toils and her tears were vain. Weary and broken-hearted, she returned; and shortly after, "being warned of God in a dream" that her end was nigh, she diligently put her house in order, was taken ill, and died, peacefully resting on her Redeemer. At one Sabbath-morning's service Mr. Hardey baptized four adults, of whom three were people of caste, who declared that they fully and for ever abandoned "every part of that heathenish system." On one occasion Mr. Hardey met the people on the day previous to the administration of the Lord's supper. He remarked strongly on the guilt of any who, while sinning against the Lord Jesus, came to take those emblems of his sorrows. The next day, thirty-seven natives celebrated the Saviour's death under an influence deeply hallowed. But one was wanting, who had been with them on the Saturday. Inquiry being made as to the cause, it was found that he had been living in secret sin. The word of rebuke had pierced his heart: he durst not go to the holy sacrament; and thus was saved from continued hypocrisy, and the church from the guilt of such a member. God has given our brethren who have laboured in this field, many proofs of his approbation. Mr. Cryer was Mr. Hardey's predecessor; and I have seldom seen any one more affected than was he when parting from his beloved Tamul flock. Their evidences of fervent attachment quite melted him; and it was easy to see that between him and them subsisted warmly all the affections that endear pastor and people, In connexion with this branch of the mission, are five day and two Sabbath schools.

The third, and most important, branch of our operations in Bangalore, is the Canarese.* About three miles distant from the Tamul mission-house, and just outside one of the gates of the town, Mr. Hodson obtained a piece of ground. At first there was no missionary to occupy it; and, as the only measure then practicable, a school was built, with a small house for the master's residence. The education given was in English, and the attendance became considerable. Afterwards, Mr. Webber, an excellent and gifted Indo-Briton, was sent to labour on the station. In the year 1840, Mr. Jenkins and Mr. Garrett were appointed as Canarese missionaries, with authority to build a mission-house and printing-office. The English gentry subscribed most liberally to the new erections, which in a few months were completed. The mission-family took up their abode close by the town, and the printing-press was put into immediate operation. The coolness of the morning air, the early habits of the country, and the comparative freedom of the people from occupation about sunrise, point out that time, or shortly afterwards, as the most favourable for preaching to the natives. Having been obliged to spend some time in Bangalore under medical treatment, which was not to be obtained nearer my own station, I had many opportunities of witnessing and sharing the labours of our brethren in the Canarese department. Going into some street, they would select a favourable place, open the Scriptures, and read. While thus engaged, the people gather round. The missionary then selects a text, and proceeds to preach. The sub-

* This word ought to be Canarda; but the corrupt form is current.

jects are generally of the most elementary kind. The unity of God, his spirituality and holiness, the corrupt heart and guilty life of man, the certainty that these will entail punishment, the incompetence of penance or idols to save, and the wonderful atonement of Christ, whereby pardon is made just, and renewal of heart possible, are the truths I have often heard Mr. Jenkins proclaiming in the streets of Bangalore, and often attempted to proclaim. Few things are more affecting than to see a messenger of the cross take his stand in some thoroughfare of a great heathen city, and begin to set forth the truth of God. A crowd of dark faces soon surrounds him, some sneering, some deeply attentive, the greater number with a look of pure curiosity. They hear strange things; you see on their countenances a constant play of wonder, reluctant concurrence, or resolute dissent. Sometimes the simplest truths in religion, or the plainest duties in morals, are strenuously controverted. The missionary needs to be prepared with a ready answer to an ingenious cavil, and with a placid temper, to meet biting reproach, or startling blasphemy. But in general he has the candid attention of the people, and by far the greater number admit the beautiful purity of his doctrine. They rarely assail Christianity, except on the ground of the immorality of Englishmen, or that of Romanism, whose disciples, though Christians, are as great idolaters as they. So difficult is it to make them believe that Popery and Protestantism are different religions, that I have very little fear of injurious effects arising from the labours of different evangelical churches, whose faith and worship are one: unless, indeed, the agents of those churches

should be guilty of seeking to make their distinctions prominent, and their claims exclusive. The congregations are frequently numerous. I have preached to hundreds in the busiest parts of the city. Sometimes a discourse is heard, from beginning to end, without a word of interruption. The missionary never preaches without the clear conviction that the truth he is delivering will, in God's hand, speed that change by which the people of a continent will rise into the glorious liberty of the children of God. Of all the combinations which, in our strange world, grief makes with hope and joy, none is more exciting than that in the breast of a Christian man looking on a city of idols, and employing for its regeneration the means appointed of God. Besides their labours in the city, our brethren visit the neighbouring villages, to the distance of six or seven miles, reaching them at such an hour as will permit them time to preach, and return before breakfast. They preach to the heathen *every morning in the year*, and frequently have evening service in addition.

In the Canarese department of our work at Bangalore are one Sabbath and six day schools. One of the latter receives a grant monthly from government towards its support. The recent decision, by which public employment is opened only to those who shall have acquired a competent education, will do much to increase the efficiency of this branch of Christian operations. Many more will send their sons ; and progress will now be so essential, that the attendance will not be suspended by every native holiday, which has hitherto been the case, and has proved a serious counteraction to the good received at school. These effects, I learn

from my esteemed friend, Mr. Garratt, are even now observable. Mrs. Garratt has established a school of a character peculiarly interesting. Of all the objects presented to the eye of Christian kindness in India, there is scarcely one more pitiable than an orphan girl. They are sold for a trifle. Traders in iniquity buy them, teach them to read, sing, and dance, and at an early age devote them to the service of some temple; that is, to infamy. Mrs. Garratt has undertaken a girls' orphan school, in which she not only educates, but entirely supports, them; thus averting the hateful destiny to which they, most likely, would have fallen, and early imbuing them with Christian truth.

Although this mission is of recent establishment, first-fruits have already been gathered. Mr. Jenkins had not laboured upon it much above a year, when illness compelled him to return to England. But on the last Sabbath of his stay he had the delight of baptizing two persons, on whom he looked with joyful hope, as the promise of a rich harvest. Since his return, he has heard that one of these has testified, in death, to the Redeemer's grace. Mr. Garrett continues on the station. Under his most efficient management, the printing-press has effected important services. I have in my possession a variety of works issued from it, all of which are calculated to be useful. In Bangalore we have one hundred and twenty-one church members, eleven schools, and five hundred and seven scholars.

The operations of the missionaries are aided by a Tract Society, and a School-book Society. I had the pleasure of being present at the formation of the latter, which has for its object the preparation of valuable

school-books in Canarese, as also to keep on sale a stock of Tamul and English school-books, with various articles of stationery; thus affording the natives every facility for the pursuit of education. This society has proceeded with great vigour and success. They have published many valuable works, and brought others into circulation. This is a field of labour eminently important; for even where no more direct Christian agencies can act upon the people, their own vicious books may be supplanted, and their youth, instead of wading through filthy mythology, receive solid information cast in a Christian mould. This is not so difficult as might be supposed. The native books are written on the leaves of the palmyra-tree, which are from nine to eighteen inches long, and from two to three broad. Each leaf is pierced with a round hole, through which runs a cord, serving to bind them altogether, but permitting them to be held loosely when the book is used. They can only be multiplied by copying; and the writing is performed by an iron style, like a large skewer, which is held upright in the hand, and scrapes marks on the soft leaf. The writer proceeds rapidly; his letters are well formed; and though both sides of the leaf are deeply indented, there is never a perforation. But however you may admire the scribe, his book-making is slow and expensive; and, when finished, it is a clumsy thing, compared with the compact and beautiful production of the printer. In elegance, portableness, and economy, the European book at once asserts its superiority. The natives are sensible of this: they admire it amazingly. It is as great an advance in literature, as in travelling the locomotive is on the stage-

coach. They covet a book; and I have seen them, on receiving one, squat them down then and there, and begin to pore over those pages so mysteriously multiplied, and yet so unaccountably correct. With adequate funds and agencies, it would not be difficult to introduce our school-books into almost every native school in the country. A proper system of colportage would effect it. One day a fine Bramhan boy came into my study at Goobbee, and asked for a book. I denied him; but he repeatedly urged his request. I still declined; saying, my few books must be kept for grown persons, as boys were likely to misuse them. He would not be refused. I said, "If you are so anxious to have our books, why don't you come to our school?" He replied, with vivacity, "I wish to do so, but my father won't let me." "Then to what school do you go?" He mentioned one, of which the master had always evinced the utmost bigotry, strenuously resisting all our attempts to approach either himself or his scholars. I then asked, "What are you reading at school?" "Just at present we are reading 'Strictures on Hinduism;'" that being a tract by Mr. Rice, of Bangalore, ably exposing the sins and follies of that system, of which this boy was born a priest. On another occasion I was preaching under shade of a jack-fruit tree, (*artocarpus integrifolia*,) in the market-place of a town called Biddiri. On my left arm was a pile of tracts and portions of Scripture, intended for distribution. At the close of a long discourse, I began to give away the books, when almost every hand and voice in the crowd was raised. Men and boys strained and shouted to gain a book. Low salaams, huge compliments, and right lofty titles

were lavished upon me, in hope of catching my attention. "Can you read?" I would ask one. "Yes, I can read;" and, seizing the book I handed, he would begin, in a low recitative, to show his scholarship. "Can you read?" I would ask another. "Yes." But when told to do so,—"No, I can't read; but my son can." In the crowd I observed a tall country lad plying elbows and shoulders with all imaginable spirit, in the vain hope of forcing a passage. At length, despairing of success, he reached over the shoulders of a man, and cried, at the top of his voice, "Sir! Sir! you must keep one for me, sir; you must keep one for me!" Amused at his earnestness, I said, "Why one for you, above all others?" "Oh, sir, we want it for our school; we want it for our school!" This at once arrested my attention; and he told me that he lived in a village some miles distant, in which a missionary had never been; that some of their people had got books from us during a former visit to Biddiri market; that these had been introduced to the school instead of those in use before; that they were wonderfully pleased with their *boodhi*, "sense;" but that they wanted some more to complete the set; and the schoolmaster hearing that we had been at Chayloor, a neighbouring town, the day before, concluded we should be that day at Biddiri, and accordingly had sent him on purpose to obtain them. These instances show how easily the Christian school-book may gain access, even where both master and pupils are heathen. Could such a society as the Bangalore School-book Society only command funds, to send their publications through every village in the country, offering them for sale at very low prices, it is most probable

the people would greedily receive them, and that they would go far towards paving the way for the advance of Christianity.

The Romanists have long had a mission at Bangalore. The only effects of it which came under my notice were these: one day when entering the pettah, near the fort, I observed a rude erection, something like the booths built by mountebanks in fairs, and on asking what it meant, was told that it was the Christians, who where getting up a play, in connexion with some of their religious feasts. From the hints I received as to the subject, it appeared to be, the holy family, or the Saviour's history. The Romish priests have carried into India the profane habit obtaining in Popish countries of making the holiest themes of Scripture subjects for the drama, and the Hindus learn to judge of the purity and the dignity of our religion, from barbarous theatricals. One morning in approaching the same gate, I overtook an old man, and began my conversation with him in a way which was very much my custom, by asking, "Who is your god?" He said, *Nanagay Antownay dayvaru*, "Antownay is my God." I observed that, of all the gods with whose names I was familiar. I had never heard of that one before, and repeated my question. He simply replied, "Antownay is my god." Puzzled, but resolved to learn who this new god was, I said, "What caste are you of?" "I am of the Roman caste," said the man; and in a moment I saw that the strange name was Anthony, that Portuguese saint being a favourite among his fellow countrymen in India. Still, it seemed impossible that the man could mean what he had said; and I asked, "Do you say that he is your

god?" "Yes," replied this *Christian*, *Antownay dayvaru*, "Anthony is God." I asked where he was, what made of, and what size. He said he was in the chapel, made of clay, about as high as his breast, and painted white, yellow, black, and red. "But," I asked, "have you no other god?" "No." "What, no other god but Anthony?" His dogged reply was, "They talk about Maryama;* but Anthony is the god." This is a melancholy, a horrifying fact, and will completely remove the surprise that any may have felt, that Protestant missionaries in New-Zealand and elsewhere should have raised the question as to whether they ought to rebaptize those who, having been Romanists, seek admission to their communion. Is a man baptized, by the water and the words, when he does not know whereunto he was baptized, does not so much as know "whether there be any Holy Ghost?" Is baptism, administered to a man who has no kind of Christian faith, and no knowledge to found that faith upon, a sacrament or a profanation?

Before proceeding to my station, I was detained in Bangalore for nearly a month. Having obtained a Bramhan moonshi, I daily prosecuted the study of the language under his tuition. Feeling the importance of a correct pronunciation, and the difficulty of obtaining it, I made use of him almost exclusively for this purpose, making him read word by word, and repeating each after him, with an attempt to imitate his tones. After a while, this extended to clauses, and then to whole sentences. It soon appeared that he was no way scru-

* This is the very name of the heathen goddess of disease.

pulous in correcting mistakes, and urging him to be so produced nothing but large promises. To meet this, I often made a slip intentionally, and, when it was permitted to pass, reproved him sharply; this produced some little amendment. But he seemed to think it was not quite respectful to expose every little blunder; as if one were to be offended at his doing the very thing he was paid to do. He knew English, and liked to talk it; so that my object being, not to improve him in English, but to learn to preach in Canarese, it became evident that the better way would be to get a man with whom it would not be possible to communicate except in that tongue. Through the kindness of Mr. Jenkins, I secured the services of a Bramhan living in a remote village, with some reputation both as a scholar and as an author, and who had not an English word or an English idea in his head. He promised to join me at my station.

The earliest historical notice of Bangalore which I have found is, that Shajee, father to Shivajee, the celebrated founder of the Mahratta empire, had here the seat of a government which he held under Viziapore.* The town of Mysore, distant about ninety miles, was the capital of petty rajahs, who gradually extended their territory northward, till it embraced Toomkoor and Chayloor; and thus the possession of Bangalore became desirable. Chick Dio, who reigned towards the close of the seventeenth century, was a man of considerable enterprise. He consolidated the growing kingdom by establishing post-offices all over it, and making every

* Wilke's Historical Sketches.

postmaster a spy. To gain Bangalore, he agreed to pay three lacs of rupees, £30,000. The terms were concluded with Eccojee, brother to Shivajee; but before the transfer had taken place, Kasseim Khan, one of Aurengzebe's generals, stepped in, took the place, accepted the stipulated price, and handed over his capture to the Mysore king. When the old race had fallen under that decrepitude which soon overtakes heathen and Mohammedan dynasties, Hydur seized the country with lion gripe. Soon perceiving the importance of Bangalore, he erected a fort, in which his son Tipŭ had such confidence, that in 1755, he transferred his hareem thither from Seringapatam. But when, in 1791, the Marquis of Cornwallis approached at the head of an English army, his confidence gave way, and, instead of devoting himself to military preparations, he was occupied in personally superintending the removal of the same precious charge back to the island capital. The first stroke of the British was to storm the pettah. Meir Hussein, in his amusing Life of Tipŭ, says, "Colonel Moorhouse and General Meadows, with a strong body of troops, attacked the town; and after the sacrifice of thousands of men on both sides, and after an attack of six hours, the town was, with great gallantry, taken, and so large a quantity of spoil, such as gold, jewels, &c., fell into the hands of the captors, that penury and want were thenceforward discharged or struck off from the muster-roll of the English army. After this the English army commenced raising batteries, and for fourteen days they battered the fort continually." The result of this battering was a breach, which Lord Cornwallis stormed at night. The next

morning a thousand lifeless bodies showed how diligently both assailant and defender had done the work of death. The peace of the next year placed Bangalore again under the flag of Tipŭ, who had so completely lost his confidence in the fort, that he caused it to be dismantled.

At his downfall, the lineal representative of the ancient kings was restored to the throne. But our government reserved to themselves the right to "interfere to any extent in the internal administration of the country, or even to take the unlimited management of it to themselves;" * stipulating, also, that the entire military force of the kingdom should be drawn from their own armies. For the head-quarters of this force Bangalore was marked as highly eligible, equally by its importance as a city, its position toward the realm to be protected, the salubrity of its climate, and its accessibleness from the Carnatic. On it the choice fell, a choice which greatly increased its importance, and provided the Madras army with a station whose climate furnishes a welcome relief from the fiery heats, under which they suffer at many of their posts.

The new rajah was a boy. The administration fell into the hands of Bramhans, who continued to hold all real power, even after he had attained his majority. Those endless corruptions and rapacities indigenous to Hindu governments flourished among the officials, both metropolitan and provincial. The poor ryots were mulcted and oppressed on every hand. To complain of wrong, was to incur ruin. The net of official influence surrounded every village; and woe to him who,

* Mill.

in the frenzy of his griefs, attempted to rend a single mesh. In a country where property is sacred and actions free, it is impossible to credit the tales which the Mysore ryots tell of the heartless cupidity with which the Bramhans were accustomed, during this period, to seize on their little possessions, and of the imperturbable vindictiveness with which they hunted to beggary any "village Hampden" that ventured upon resistance. A ryot hates a Bramhan as a Negro hates a slave-driver. And yet he dreads him in his soul. Behind his back he calls him *haaruva*, "a jumper;" to his face, *swaami*, or *dayvaru*, "god." The name "jumper," they say, was given because a Bramhan could never be caught in an offence; no matter how clear the evidence against him, no matter how notorious his crimes or his extortions, no matter how many the witnesses prepared to prove his guilt; by bribery, by cunning, or by interest, he always leaped over the inclosure of difficulties in which his victims thought him to be inextricably bound. At length, even Hindu endurance was worn out. The ryots became maddened, they rose, seized twenty Bramhans, and hanged them on trees. The whole country was disturbed, and every eye turned to the British Resident as the only person possessing the power to terminate these disasters. A Bramhan has told me, such was the state of feeling, that in Nuggur, a party of herd-boys, who were in the habit of beguiling their time with some rude drama, catching the spirit of the day, began to act the characters then most conspicuous in the national politics. Some were ministers, some provincial officers, some ryots; one was the British resident. On him the

clamorous ryots cast the principal blame, alleging he could end their wrongs but would not; on him the one appointed judge declared the blame to rest, and sentenced him to die; and so thoroughly had they caught the spirit of their piece, that the unfortunate boy was actually hanged. At length, the supreme government interposed. To the rajah a princely income was secured; but they took into their own hands the entire administration of the country. The people say, that the rajah was much affected on learning this decision; and that his principal officers, appearing before him in high excitement, urged him to take up arms, promising to spill the last drop of their blood in maintaining his rights. But he wisely answered, "The Company are my father: they gave me my kingdom, and they have a right to take it back. Besides, what king has fought with the Company and succeeded? I will not fight with the Company." He quietly submitted to the change, lives in comparative retirement; but retains all the insignia of royalty, and enjoys ample revenues. To conduct the affairs of the kingdom, a Commission was appointed, consisting of eight gentlemen, most of them military men. To us, with our notions of representation, liberty, and so on, it seems strange that a country which had been disturbed under its own prince should settle down into peace under eight foreigners, unpractised in the duties of statesmen or magistrates. But such has been the case. The people have sometimes said to me, "We can hardly believe ourselves: we lie down at night, and rise up in the morning, and find our cattle safe, our crops safe, everything just as we left it, and this for year after year! Formerly it was con-

stantly, an army here, a foray there, and we never knew what was our own. The Company have done a great thing." But they murmur sorely at the amount of power still left with the *Haaruvaru*, "Bramhans," saying, that in spite of all possible vigilance on the part of the Commissioners, there is vast extortion in the collection of village revenues. This complaint they incessantly urge; but, beside it, I found entire satisfaction with their new rulers, except an occasional murmur that the land-charge was too heavy, and frequent expressions of dissatisfaction at the impunity afforded to offenders against the marriage vow, and the insufficient punishment, as they deem it, of theft. General Cubbon and the other Commissioners deserve the highest credit for the temper, judgment, and integrity with which they have discharged their onerous trust.

In connexion with this change, Lord William Bentinck—the best of India's governor-generals—visited the Mysore. The country-people from the neighbourhood through which he passed have told me, in terms of unbounded wonder, that they saw him riding in his palankeen like a private gentleman, without escort or pomp. And their admiration was equal to their wonder. One could hardly believe that this circumstance would have made so deep and favourable an impression upon their minds; but, from the language they used, it was obvious that no amount of display could have given them such views of the greatness of his own mind, or of our national character. Closing their tale, they would say, "Among us, if only a little Polygar had to go to the next village, he must have guards, and

heralds, and all the rest of it; but here the man that rules from the Himalaya to Ramisseram comes as if he were nobody at all; *abah! abah! yentah janaru neewu!* 'wonderful, wonderful, what a people you are!'" If anything were surprising, it would surpass belief that a gentleman could be found to write the history of India, and bestow on Lord William Bentinck such parsimonious commendation and such liberal censure, as he has received from Mr. Thornton. But Mr. Thornton belongs to that class of historians who admire nothing but conquests, and Lord William performed no great fights. Notwithstanding this, both his statesmanship and his philanthropy will be venerated by nations, when the censures of Mr. Thornton will be forgotten.

The climate of Bangalore is a combination of the tropical and the temperate. It has the sun of India, with the airs of southern Europe. The thermometer seldom exceeds 88° in the shade, and in the cool season I have known it at 64° at noon-day. During a great part of the year, the sky is covered with clouds, which gently shade you from the burning sun—a term really significant in India. At these seasons the gales are cool and bracing; so that those who come from Madras almost fancy that they recognise English breezes. The situation of the country secures it a share in both the south-west and the north-east monsoons, which shed down copious, but not inundating rains. The soil yields, with cheerful profusion, the various fruits of India and very many of Europe. The orange and the potato, the yam and the apple, the strawberry and the cocoa-nut, the mangoe and peach, with gooseberries and

guavas, grapes and pineapples, are among the productions of this charming climate.

At the change of government, the whole Mysore became open to Christian missionaries; and it may be fairly asserted, that there is no country on the face of the earth where their labours are more free. By the way-side or in the public street, at the temple-door or in the tradesman's shop, in the thickest of a feast or the busiest of a market, the minister of Christ may open the Bible, preach the Gospel, and offer prayer to God. In city, or town, or village, he is heard without molestation, and often with profound attention. Our missionaries have already preached Jesus and the resurrection, from the palace of the king down to the hut of the outcast. The kingdom contains thirty-three thousand towns and villages. Of these, four have missionaries! All the others are equally open; but there is no one to enter in. The labourers are few.

CHAPTER V.

MY CIRCUIT.

THE Mysore is never so lovely as in the month of October. The rains have just fallen; the fields are all green, the tanks full, and the emerald of the trees luxurious. It was on a cloudless afternoon of this month, that Mr. Jenkins and myself, riding along the road from Bangalore to Belgaum, approached the hill-pass of Hully Nidjgul. At this point the road intersects a chain of hills which runs across the country, offering a bold variety to its gentle undulations; and, at some points, jutting up to mountain height; as in the case of Shivagunga, a high conical peak, not less sacred here than

the scene of St. Patrick's miracle on the coast of Mayo. We dismounted, and walked slowly up a declivity, between fields of the castor-oil plant, conversing about our mission work. When nearly entering the pass, Mr. Jenkins said, "Now in a few moments you will see into your circuit." The words were thrilling: joy, and hope, and prayer rose together, and went up to God. We were now at the head of the pass: on either hand rose the hills. Up their sides crowded thick woods, with varied and intensely beautiful foliage; but they were capped with bald domes of dark rock, like a weather-beaten helmet surmounting holiday apparel. At the foot of the hill spread several old banyans, their branches in different places forming Gothic arches, through which the sun darted glowing beams, that, by the aid of the grey stems and green leaves, produced a novel beauty, strangely blending the effect of architecture with that of painting, and rare, unhackneyed landscape. Beyond, the country stretched to the western horizon, seeming at first a long bright glen, resting between two ranges of guardian hills, but, as you advanced, spreading out into a verdant undulating vale. The sun was near setting, and his eye kindled to see the charms of his own pencilling. Numerous tanks sparkled among the bright green rice-fields. Water in India is not merely beautiful—it is precious. It may not be really a lovelier feature in a landscape than at home; but it is far more effective. It touches two chords instead of one: awaking at once the joy of beauty, and the thrill of gratitude. In an English landscape it is only the complexion; in an Indian one, the eye. Those broad sheets of water lay under the

evening light, some of them blushing red, as if they had been turned to wine to rejoice in a day so fair; some with a delicate radiance on their still surface, beautiful as the light of genius on a pale countenance. Not a man, not an animal was to be seen—not even the song of a bird, or the smoke of a cottage, to indicate life. All was peace and solitude. The sun might have kept the spot for himself to look on; and if Peace wanted a temple, let her build it there. But that valley stretched within the circle where lay my sphere of happy duties! It was this that gave to every object a mystic power, which first prepared the heart, and then transferred to it the whole scene, with the speed and the truth of a mental photograph. It is there still—there just as at first, with the same objects, the same lights and shadows, the same dear companion watching my emotions with a brother's eye.

Descending the pass, the hill on our left began to wear appearances that little harmonized with the feeling hitherto reigning over the place. In a few minutes the mouldering outline of fortifications was distinctly visible. Then the path led close by a crowd of graves,—"in the garden there was a sepulchre;" then by the ruins of an extensive town, where hut and mansion were crumbling among brushwood, and all as silent as the hill! At first sight of this spot, one was ready to feel as if it had escaped the blight of sin; but now it was proved full sadly that death and war had found it. That noiseless hill had listened to the clash of arms. That still rock had echoed the cry of agony and danger. That gentle turf had drunk human gore. Those beautiful leaves were enriched by the ashes of butchered

men! Yes, of men; for men had been there. Where were they now?—Where were they now? This was a sudden turn for the feelings. Such desolation on such beauty! It was melancholy as mourning on a laughing infant. It reminded you of the fine country around, with its polished manners and dead souls. Then the heart, softened as it was, might well weep. It was as when some mighty orator has raised a tear to your eye with delight, and then brings it down with sorrow. I shall never forget the first sight of my Circuit.

These fortified hills (or *droogs*, as they were called after the native name) once abounded in the Mysore; and the sudden capture of several by our troops has done far more to impress the people with a conviction that British valour is invincible, than all the grand battles, or regular sieges. Nundydroog, and Saverndroog especially, were held to be beyond any possibility of assault: the latter very much answered to Sallust's description of that Numidian *droog* which was lost to Jugurtha by a Roman soldier's taste for a dish of snails. The march against them was deemed an impudent absurdity. And even now the villagers talk more of some officers employed in these daring exploits than of Lord Harris who led the grand army which took Seringapatam, or of Sir David Baird who stormed that citadel. They say that in our set battles there is little room for the exercise of personal courage; that the men are a machine, and the weapon is fire. But when speaking of the great *droogs* and their captors, they shrug their shoulders, shake their heads, cry, "*Abáh! abáh!*" and say, "They were as bad as lions."

We spent that night at Toomcoor, in the house of an

intelligent Indo-Briton apothecary, in the employment of the government; and started the next morning for Goobbee, the place of our destination. Hitherto we had travelled on a good road, lately formed under the direction of Captain Dobbs, the valuable superintendant of the Chittledroog division.* But now leaving all traces of the English, we struck off to the left, by a native road. This was no more than a well-beaten track, occasionally marked by two low fences; but more frequently lying across the corn fields, or open plains of grass. The grass is only such as grows spontaneously, no pains being taken to improve it, by manure or irrigation; it is, consequently, coarse and innutritious; and on this the numerous cattle of the villagers are miserably pastured.

When we had ridden about eleven miles, and were winding round a hill, we came upon a path, skirted by two hedgerows, like the road leading to a farm-house. At the head of this, distant about a furlong, a white bungalow was glistening in the sun. This was the mission-house, the scene of my destined labours. Never did I approach a spot with such feelings. It was a lonely home; but it was a post of glorious duty. There was no Christian congregation with whom to worship; but there was the God whom Christians adore. The people never hailed a Sabbath, nor observed a sacrament; but in another generation they should. By a fault of mine, before these heathen, the Redeemer would be wounded in the house of his friends; but by grace

* The Mysore is distributed into four provinces or divisions,—Astagram, Bangalore, Chittledroog, and Nuggur. The officer in charge of one of these is called "superintendant."

and faithfulness his enemies would be won. It was a position in which there was only One to help; but He was nigh.

The mission-house is a cottage of one story, covered with red tiles, beautifully neat, well furnished, and situated on the crest of a considerable hill. About it, Mrs. Jenkins had arranged a tasteful garden, on the parterres of which pleasant flowers were smiling, and a beautiful convolvulus wandering among the shrubs of the hedge. The place had a delightful air of homely cottage comfort, far different from what one would expect in so remote a situation. It was sweet, after six months of wayfaring, to bow before God on the very spot to which all your journeys had been directed, and there commemorate the mercies which had enriched the past, and pray for those that would crown the future.

The hill on which the mission-house stands commands an extensive prospect. Close round its base spreads a large tank,—a sheet of water about two miles long, and one broad. At its opposite side lies a smaller tank, where large numbers of wild-ducks congregate. In the interval between these two, stands a grove, through the branches of which you see the roofs of Goobbee, and the tower of the chief temple. On the east the view is bounded by the hills already mentioned, the woods of Toomcoor nestling at the base; whence the blue outline stretches away to Nidjgul, and the sacred peak of Shivagunga, distant about eighteen miles, near which at night you see the blaze of fires, lighted to keep tigers away. Just across the large tank, close by the water's edge, an old temple is shaded by a group of decaying trees, and close by, a village lies under its

tutelage. Behind this, and to its left, you trace other villages. To its right a high hill rises with gradual swell: it is for the greater part overrun with brushwood; but has a bald piece of ground towards its foot, on which stands in solitary pride the noblest banyan I saw in India. It is about two miles from the mission-house, and, at that distance, looks, as to extent, like a small grove; but even there the harmony of outline gives an impression of unity. There are (as well as I remember) upwards of thirty trunks, as large as a middle-sized elm, each of them projecting branches, from which again pendant roots have struck down into the earth, and are maturing themselves into auxiliary stems. The combination of bulk and vitality is unique, and consequently impressive. This stately pile of vegetative architecture, of which the foundations, pillars, arches, all are direct from the hand of God, and vital with his impulse, forms a shade irresistibly calling to meditation. But so far from exciting adoration to Him, amongst the heathen it attracts their worship to itself. Under it you find a rude empty altar, of which this tree is the divinity! To the right of this stretches a plain, irrigated by the waters of the tank, and covered with rice-fields and villages. Toward the west the eye travels over a long valley, with groves, villages, the tower of a temple, and a few mountains peering above the horizon. The whole scene was neither tame nor savage: its combination of objects gave an air of peaceful civilization, united with novelty and boldness. It was fair; but lonely, passing lonely. There were temples; but no tower marked a sanctuary of the living God. There were men, old and young, "and boys and girls playing

in the streets;" but in town or village was not a single one who had even been baptized in the ever-blessed Name. And there were homes, not the wild wigwam, nor the miserable kraal, but "fenced towns," with a busy and polite people; but you could not take to your heart the assurance that one of them was the dwelling of a united family. To one fresh from the land where a sanctuary is always near, where the fellowship of saints is familiar, where round many a fireside domestic love and divine hopes shed their mingled joy, these thoughts were dreary. But the chill they brought was warmed away by the recollection, that to this spot had come at last that Gospel, by which, in time, it would be graced with every object that rejoices an angel's eye.

In the year 1836 Mr. Hodson made a tour in the Mysore and Coorg, in order to acquire information as to the general facilities for missionary labours, existing in the country, and also to fix upon some station for immediate occupancy. Of that journey interesting records were published at the time in the Missionary Notices, and I have reason to hope that Mr. Hodson himself will give the public some further account of his missionary operations. Several reasons led to the selection of Goobbee. It was the centre of a large and accessible population. It was far from English soldiery, by whose example the cause of Christianity might be prejudiced. The number of resident Bramhans was small, and their influence unimportant. Whether a prospect of feeble opposition is a good ground on which to choose a mission station, it is not necessary here to inquire. Perhaps the most natural line of proceeding is both the best, and most accordant with apostolic

example; that is, to carry the Gospel just to those places where are the greatest number of sinners in need of it, leaving all questions about opposition and facility in the hands of God.

When the selection had been made, Mr. Hodson obtained a piece of ground, and began to construct a mud house for temporary residence, Captain Dobbs kindly lending him a tent to live in until its completion. One day, before time was given to take any precaution, a squall, charged with a whole cloud of dust, came down upon them, overwhelmed the tent, filled all their stores with sand, and left both Mr. and Mrs. Hodson to live in their palankeens till the damage was repaired. These squalls are frequent at one season of the year; but high winds and hurricanes are scarcely known. When the mud house was finished, they were very comfortable till the wet season came; but then they would sometimes awake in the night with the rain pouring on them, and, no other part of the house being safer, Mr. Hodson used, as the only available shelter, to sit up in bed, holding an umbrella over them. After a while he raised the present substantial building of brick and mud, a cement which, though inferior to mortar, is not despicable, but used in many a goodly Indian bungalow. It has this inconvenience, that you are constantly liable to irruptions of white ants from any part of the walls. They will break out and spread themselves as rapidly as an army of Mahrattas, devouring everything in their way, and sometimes damaging a whole library in the course of a night. Shortly after the completion of the house, Mr. Jenkins joined the station, and Mr. Hodson went to form a new one at the city of Mysore. Mr.

Jenkins had been there about a twelvemonth at the time of my arrival.

The town of Goobbee,* situated about sixty miles north-west of Bangalore, has between six and seven thousand inhabitants. They depend principally on mercantile pursuits; having a weekly market, and carrying on a considerable trade in betel-nut, coffee, and grain, which they purchase from the people of the western province, Nuggur, (formerly called Bednore,) and sell in the markets of Bangalore and Wallajahnuggur. The place has long enjoyed the reputation of great wealth, being called *Hurna*, or "Golden Goobbee." But wealth in India must not be estimated by English standards. There a man will gladly work for three rupees (six shillings) per month, and be able to support himself. His raagi and spices cost but little; his rent, except in large towns, scarcely anything; firing he wants none, but a few fragments of parched cow-dung to cook his two meals; (of these one is often eaten cold;) and if he has no spare money for clothes, it is very little matter,—the climate clothes him. A man with ten rupees† per month is in comfortable circumstances; with twenty, respectable; with fifty, prosperous; and wealthy on a hundred. The merchant who can command a capital of five thousand rupees is a sort of prince. Of course this remark does not apply to large commercial cities, where the expansion of English trade dilates everything. Beside the merchants and shopkeepers, there

* The nearest points marked on maps are Sera, Toomcoor, or Cudaba.

† A rupee is two shillings, consequently ten are a pound; a hundred, ten pounds; a thousand, a hundred pounds, and so on.

are a few weavers; but their work is of the coarsest kind; all fine cloths being obtained from distant parts of the country. The market is held every Sunday, and is numerously attended.

The town is, like all towns in India, surrounded by a wall. They are always of mud, varying in height and thickness according to the importance of the place. It is, generally, a mere line of wall, capable only of repelling robbers or wild beasts; but in larger places has, at intervals, square projecting towers, intended for military defence. These mud fortifications have often proved formidable obstacles to artillery; the sodden mass permitting the shot to sink into it, without being materially shaken. Even small villages, with fifty or a hundred houses, have their wall. As well as I could learn, the term "town" (*oor*) is applied only to a place with both wall and market; "village," (*hully*,) to one with a wall, but not a market; and "hamlet," (*pâlya*,) to a group of houses without either. "City" (*patna*) is used only of seats of government, or very large places. A village usually has one gate; a town two, at opposite points; a city several. The gates are of wood; and, though ponderous, help one to conceive how the gigantic strength of Samson might wrest such from their hinges, and bear them away. The gateway is a covered passage of several yards long, with a raised seat on either side. In a country village you will often find the elders (*hiriyaru*) seated here in the early morning. It is a position from which they can speak to the men as they proceed to their duties in the fields, to the women as they go to draw water, or where they may be easily found by any one having to seek

advice, or make complaint. The town of Gobbee consists of two main streets, intersected by several minor ones. At one side stands the fort, mud, of course, within which live most of the rich merchants; several holding a private residence here, even though they carry on business in the pettah. On another side is that unfailing appendage to a Hindu town, the village of the out-castes. This is a polluted spot. No caste man, though he be a drudge or a menial, would be found here. He will come within call, without touching the accursed ground, and, bawling out his summons for the person he may happen to want, continues on his own sacred ground till the message is conveyed. No one who has not lived familiarly among the people can conceive the weight of that curse which Hinduism has prepared for those unhappy beings who cannot claim a standing among the accredited castes. The meanest of the people loathe them as viler than swine. Caste men have followed me to the very verge of the defiled ground, begging me, by all manner of arguments, by my respectability, my regard for decency, my disapproval of every thing disgustful, and by the utter impossibility of making them understand anything, not to degrade myself, or affront the people who had just been listening to me, by going to preach to wretches wholly incapable of being taught. Servitude is honour, slavery brotherhood, and public conviction reward, compared with the fathomless degradation into which the poor out-caste is plunged. Father, mother, children, down they are sunk, all trample on them, all abuse, all revile, all execrate, all shun; and this has been going on for generations. By this horrid proscrip-

tion, millions of human beings are held in a state of anomalous slavery. No one claims their person,—it is too vile; but with limbs unchained, the man is denied every right of citizenship; he and his unborn children, and his children's children, are doomed to ignorance, exclusion, and contempt. He is an exile from the human family, cut off, and cut off for ever, from affection and improvement. No sum can buy his ransom; no monarch make him free. He was born to his curse, and his offspring is predestinated to the same. Let him look where he will, he reads the sentence of his exile, pronounced for a crime he knows not. The earth rejects him; he may not own a single rood: the water rejects him; his defiled vessel, or more defiled person, would pollute a whole well; let him dig in a corner, or drink with the swine: Law rejects him; who is he that he should complain? Religion rejects him; his impure step would contaminate the holiest fane; let him crouch to a goblin on his own vile ground: aye, Charity herself rejects him; to give him a morsel would be "to take the children's bread, and cast it unto dogs." And this bitterness is in his lot, that he is dwelling in his own land, not captured in war, not sentenced for crime, not banished as dangerous; but living full in the sight of all blessings, and denied every one, because he was born accursed. And will it be believed, that an European, that a Christian missionary, that the Abbé Dubois, first accurately details their vices, and then justifies their wrongs? "If the caste of the pariahs," says the Abbé, (p. 458,) "be held in low and vile repute, it must be admitted that it deserves to be so." It is true they are base, filthy, and im-

moral; and, after ages of such treatment, no wonder. They would have been more than human, had they not long ago sunk into everything lamentable. But whence their recklessness, their filth, their voracity? From oppression, from despair, from hunger. They have no rights to lose; their fathers had none; their children will have none. If every one of them vented a ferocious misanthrophy on every human form he could fasten upon, it would be only a natural result of the treatment that he and his have borne. The Abbé Dubois states, that this wretched section of the Hindu community "must include, at least, a fifth of the whole population." (p. 454.) But, in another part of his work, (p. 2,) he also states that the "cultivators amount, at least, to five-sixths of the population of India." Now, if the cultivators are five-sixths of the population, and the pariahs one-fifth, it follows that the immense multitudes composing the Bramhan, soldier, merchant, and artisan castes, are reduced to a fraction less than nothing; a result which one hesitates to receive, even on an authority so high as that generally conceded to the Abbé Dubois. The proportion of these victims of the caste system is certainly not so large. They flock to the places where Europeans have settled; as the employments which they can there obtain greatly alter their circumstances, and, indeed, raise them to a kind of independence of the caste people. But throughout the country, one in ten is a nearer proportion than one in five, though I do not pretend to say what the proportion is. But it is a fearful example of what habit may effect, that the Abbé should quietly resign a mass of people, more, according to his own calculation, than

those of his native France, to a state of degradation so directly at variance with every principle of that religion which he professed to teach,—to contempt, to exclusion, to slavery; (he calls them the "born slaves of the other tribes;") yes, to slavery, slavery imposed by custom, a tyrant the most absolute of all, who, in the foulest injustice, is venerable because of age, and because, too, he makes his throne on the tombs of our fathers, and calls to his council the ghosts of the dead. He laughs at such limited powers as statute-books or armies; and pours his commands through the milk of every mother, through the veins of every babe.

The streets of Goobbee are much like those of Bangalore, except that instead of the crowd and hurry of a large city, you have a few people moving about with the leisurely air of a country town. Almost every person you meet bears on his breast a bright silver box, of more than two inches in length, which he tells you is "god;" that is, it holds the *linga*, an idol which may not even be described. Their complexion is observably fairer than that of the people at Madras, owing to the milder climate of the table-land. Almost every forehead is smeared with the white ashes of cow-dung, some in stripes, some having the whole surface covered, and others with the bare chest and arms sanctified in the same way. These marks proclaim them worshippers of Shiva. Then you are sure to meet with beggars in some part of the streets, almost covered with these ashes: while others of the same profession, but attached to the rival sect of Vishtnuites, have forehead, chest and arms marked over with huge, ugly tridents. Thus adorned, bearing a small brass gong and a conch-

shell, and lustily bellowing the name of Govinda or Eeshwara, these beggars boldly demand alms, which they receive not so much as a humane gift, as a religious debt. They are not the poor who are forced to beg, but holy monks who have abandoned worldly pursuits. Woe to the poor man who does not meet their demand promptly! Though it were his own food, it must be given. The really poor fare ill, beside these sturdy and licentious vagabonds. It was common on market-days—Sundays—to hear an alms-giving by some rich man announced with the sound of a trumpet; but it was always a feast to these monks.

At the door of some wealthy merchant you would occasionally see his wife or daughter in full dress of costly silk, her glossy black hair graced with a round ornament of gold on the crown; long pendants from the ears, the perforation of which had been artificially increased to the diameter of half an inch; the edges of the ears crowded with a succession of rings up to the very tip; a ring, large enough for a bunch of keys, inserted into the nose,* resting on the cheek, and strung with pearls; a heart-shaped piece of gold suspended from the centre membrane of the nose, and resting on the upper lip; several chains of gold on the neck, sometimes a richly gemmed collar; the arms thronged with bracelets from above the elbow; a ring or more

* That quaint writer Thomas Fuller was not a little puzzled with the nose-jewel of which the prophet speaks as part of the finery of the Jewish women; conjecturing that it must have hung from the forehead between the eyes: for he thinks they would never be so foolish as to "make more nostrils than nature has given us," by boring the nose to insert it there. Vanity, like necessity, has no law.

on every finger; massive silver anklets loading the feet and tinkling with every motion, while each toe rejoiced in a broad ring. In fact, the first trinket graces the crown, the last decks the little toe, and between these two points no available spot is without its decoration. Then, to perfect all, the teeth are stained red, the eyelid a deep black, and the cheek painted straw colour, with an effusion of saffron. This latter custom is conclusive evidence against some writers, who tell us that among the Hindus a dark complexion is held to be more beautiful than a fair one. Were dark brown or jet black most in esteem, the ladies would paint dark brown or jet black. They paint the very colour peculiar to the fairest natives, which sufficiently indicates the prevailing taste. But every one acquainted with their habits knows, that to be called *kempu*, "red or fair," is always deemed a compliment, while *kappu*, "black or dark," is about as much so as "sallow" among ourselves. Then the statement of Bishop Heber, that there is no observable connexion between rank and complexion, is an unaccountable mistake. It is a rule to which the exceptions are very few, that good families, who can keep their children from exposure, are several shades fairer than the labouring classes.

I have seen a little girl not more than five or six years of age, with all the finery just described, standing in her father's door to display it. But I have also seen a little girl of not more than that age, in one of those same houses, with every ornament gone, her hair shaved off, and other signs of widowhood. A poor girl of three, or five, or seven, may be given by her father to a husband of thirty, or fifty, or seventy. She may never

have set her eyes on him, except on the wedding-day; she is still living at her father's house; but if the man who calls her wife die, she is his widow, and his widow for life. She is stripped of all her ornaments, her head shaved, and a widow's robe put on. Then begins a life of bitterness: she is charged with her husband's death, he has been taken from her to punish her sin in a former birth; the younger she is, the greater sinner she must have been, to be overtaken so soon; and her accusations are proportionably malignant; her presence is a curse, it must never blight social festivity nor sacred ritual; the house is cursed for her sake; no accident or misfortune occurs but it is her fault; she is the drudge, the butt, the sorrow, the reproach of her family. If she has the honour to be a Bramhan's widow, in addition to all other inflictions, she is permitted but one meal a day. She may not marry again: it would be more disgraceful than any immorality. With us the word "widow" sounds tenderly, even on harsh tongues. In the families of India it is a term of execration. And spite can find no name so bitter as the "son of a widow." The influence which this system must exert both on individual happiness and general morality, must be apparent. It is a strange instance of the fact that familiarity with vice often changes dislike into fascination, when we learn from the Abbé Dubois that though quite aware of the "disgusting inequalities of age," and though, when fresh from Europe, he resented the "cruel usage" which dooms a girl of seven to be for life the widow of some dotard; yet that in time he "completely changed his opinion," concluding that "in no view does society lose anything by this restraint." Were there

any truth in metempsychosis, it would be plain that the soul of Menu had been born, as an European, in the person of the Abbé Dubois, and had taken a journey to India for the purpose of vindicating his own institutions.

The town is enriched with two or three schools. These are, generally, like the shops, open in the front. As all reading is done in recitative, your ears are regaled from a considerable distance, by the nasal music of a score small voices chanting the changes of the alphabet, arithmetical tables, or the disgusting legends of some *purâna*. Master and pupils are comfortably squatted on the earthen floor, which is strewed with fine sand. On this the younger boys are busily tracing letters with the forefinger, singing industriously all the while a long ditty, which with an admirable mastery of jingle describes the various changes by which each letter or syllabic form is made. This is the vestibule of the Hindu temple of knowledge; and happy and clever is that urchin who within the first three months succeeds in mastering all the forms of the alphabet, so as to chant correctly the history of their mutations, and to trace the example as he chants. This tediousness arises not from any want of aptitude on the part of the boys;—indeed I never knew an European to visit a native school without receiving the impression that the children were even more apt than among ourselves;—but wholly from the complexity of the alphabet, and the utter clumsiness of the system on which it is taught. The alphabetic forms put forth by the missionaries and in use in mission-schools, reduce the labour far more than half.

At a short distance outside the eastern gate, close by

a thick grove, and with an open ground in front, stands the great temple of the town. It occupies the centre of a considerable area, enclosed by a high stone wall; in which, just opposite the front of the temple, stands a high pyramidal tower, with a gateway at its base. The temple is raised some feet from the ground, and then stone pillars support the open front of a low square apartment, without window. Behind this is a low narrow door, of which the *poojari*, the officiating priest, keeps the key, and in which the god is housed. No one is permitted to pass the gate without taking off his shoes; and, not being disposed to pay such homage, I never entered. The temples are generally of this character: a square area enclosed by a wall, in the centre a low building without any window, in the dark recess of which a holy lamp is glimmering before an image painted perhaps two or three colours, smeared with oil, and decked with garlands. When the temple is large, the outer wall embraces several acres, and is followed by two or three others before you reach the shrine; each wall having perhaps four gates, and every gate its tower. The only temple of any architectural pretensions which I had the opportunity of seeing was at Nunjangood, between Mysore and the Neilgherry hills. It is built on the ordinary model, differing only in scale. The sculpture, however, is most elaborate, the whole surface of the temple being literally thronged with mythological groups. Up to the point of the highest tower crowds a thick succession of images in every possible form, size, and posture. There is a countless muster of shapes, colossal and pigmy, human and animal, actual and fabulous, devotional and indecent. All the rabble

of strange beings with which Hinduism peoples its heaven, might, in the midst of their wars, frolics, and debaucheries, have been overtaken, like Lot's wife, with a statuary death, and this temple might be the agglomeration of them all. The worst nudes even of the French school are monitors of modesty compared with these figures. No man who has once seen the gates can ever forget them. It is a strange and hideous sight. And then to see groups of children playing before this pile of sculptured temptation, looking at it, gazing on it; and to think that thousands of the youth of both sexes go round it every year, regarding it as the shrine and embodiment of religion! Oh, it brings a feeling of oppressive sickness. You feel as if Milton's Belial, "the dissolutest spirit that fell," were standing close by, and, with a hateful leer, pointing to a huge and audacious monument to the victory he had won over everything pure in man.

One day in conversing with a Bramhan about China, a country of which he had only heard the name, he asked me if it were large, and had many people. When told that it had more than all India, his incredulity was perfect; for if the Persians say that Ispahan is half the world, to a Bramhan, India is the whole world, the countries lying beyond its sacred frontiers being only some insignificant spots for "outside barbarians." At last he demanded, "Well, how many people are there?" "Why, from three hundred and thirty to three hundred and fifty millions." "Three hundred and thirty millions!" exclaimed the astounded Bramhan: "impossible! Three hundred and thirty millions! how can that be? Why, that is as many as there are of the

gods!" Such is the number of beings, various in power and functions, which the Hindu *shastras* recognise as constituting the beatified community of the *cœlicolæ*. Ample, however, as this number of accredited divinities might be deemed, we found that the great god of Goobbee did not belong to the ranks of the thirty-three *krores*,* but was one unknown to any altars save those of the place. About two centuries ago, they say, a schoolmaster lived in their town, who, by learning, piety, and wisdom, acquired considerable fame. At his death the whole town mourned for its wisest man. They buried him with ceremony, and reared a handsome tomb to mark his grave. Among his pupils was one called Burré Gourda, who entered the public service, and, rising by rapid steps, became a *fouzdar*, or great officer of the state. Assembling the elders of his native town, he said that all his success in life were due to the lessons of his distinguished tutor; and that he was fully persuaded that one so devout and wise, so virtuous, so learned, so far above ordinary men, could not be a common mortal, but must be an *avatâra* of Shiva. The elders agreed that he must have been an *avatâra*. "Then," said Burré Gourda, "if he were an *avatâra*, is it not right that he should have *pooja*, 'worship?'" They said, "He ought to have *pooja*." This point conceded, Burré Gourda at once volunteered to be at the expense of erecting a temple, and providing for the due celebration of *pooja*, in honour of the new god, who received the name of *Goobbee Appa*, "the father of Goobbee." The present temple was built, a staff of priests and temple-women appointed, an endowment of land ob-

* A *krore* or *kworté* is ten millions.

tained, an image made, installed, and in due form transubstantiated. Goobbee Appa soon obtained universal honour in the neighbourhood, and all the older gods were eclipsed: they are not cast away, they receive their honours; but before their rival they are only *dii minores*.

This is an illustration of the ease with which objects of worship are multiplied, when once a course of idolatry is begun. The knowledge of the true God being lost, divinity is thought so mean or so terrible, that men are ready to worship anything they respect or dread. We are shocked by the darkness which permits the inhabitants of Goobbee to adore their schoolmaster; and yet these simple townspeople are only manifesting the same blindness under which the refined citizens of Athens sacrificed to Theseus, and those of Rome to Romulus. The character ascribed to Goobbee Appa is more entitled to respect than anything recorded of the Latin bandit, or the Greek chastiser of banditti. It is most likely that idolatry first began by paying reverence to an image of some departed hero, various tribes adopting that of their progenitor, and communities that of their founder, as those of Athens and Rome.* Popery is embarrassed in the process of apotheosis by the deference which it is necessary to pay to the Christian Scriptures. Hence, instead of the convenient and intelligible position of a subordinate deity, gifted by the Supreme with a certain realm and definitive powers, she is obliged, in theory at least, to place her beatified

* If Eusebius be right, (*Chronicon, Lib. Prior,*) the worship of Baal had a similar origin, being paid to Belus, the first king of Assyria, *quem Assyrii Deum nominaverunt.*

men in the intrusive position of a third party between God and man, effectually precluding all direct approach to the great presence. This theoretic disadvantage is no doubt fully made up to them by the utter oblivion into which it is cast in the prostrate devotion of the worshipper, who seeks, as the Breviary instructs us to do in the case of "blessed Nicholas the bishop," that he may, "by his merits and prayers, be delivered from the flames of hell."

Amazing reverence, confidence and zeal are manifested by the votaries of Goobbee Appa. I have known an old woman say, "What, pray no more to Goobbee Appa! Why, it is he that gives me health, food, everything. He protects the house from robbers and evil spirits; he keeps away sickness; he gives strength to work; he does everything for us. There is no god like Goobbee Appa: I must pray to Goobbee Appa." The merchants avow that when any of their transactions has been successful, they devote part of the profit to Goobbee Appa; "for," say they, "he gives us health and success: it is, therefore, just we should acknowledge his favour. If we did not, we should not deserve to be favoured in a similar way again." The way to wealth, station, and domestic happiness, is constantly asserted and firmly believed to open or close at the will of Goobbee Appa. Helenus did not more urgently impress on his anxious friend the prime importance of propitiating the vindictive Juno, than does every father in Goobbee enforce upon his son the conviction that his sole prospect of a happy life rests in devout and liberal services to this great disposer. For the terror of all sceptics, they tell that on one occasion some robbers scaled the

temple-wall at night, violated the shrine, took all the valuables, bore away in their sacrilegious hands the very god, and carried him to a distance of several miles. But he was not to be kept from his favoured altar. So, by a single bound, he passed from the hands of the thieves, and replaced himself in his wonted position, to the unutterable joy of his worshippers, who, on his being missed, had spent a sorrowful morning. There are not wanting those who say, waggishly, that the pockets of some of the rich men know well how the miracle was performed.*

The honours of Goobbee Appa are frequent, and punctually rendered. Every day he has a morning and evening sacrifice. The holy lamp is trimmed; libations of oil and *ghee* ("clarified butter") are poured upon the god, and before him; offerings are presented, according to the mind of the devotee, of fruit, flowers, *ghee*, prepared rice, or, in special cases, of clothes, jewels, or precious metals. The priest waves the offering before the idol, walks round him with it in his hand, then

* This tale forcibly reminded me of one with which I had been long familiar. On the coast of Mayo, between the town of Westport and Croagh Patrick, there is a well much resorted to by pilgrims. Rags of all colours are fixed about the sacred spot, bleaching in the sun and rain, the hope being that as the colour leaves them, the sins of the pilgrim are purged. In this holy well is a holy trout, (idolatry will make anything holy but the human heart,) which sometimes rejoices the penitents by coming out and eating of the crumbs they cast to it. At one time some Protestant soldiers from the neighbouring town seized the holy trout, and, carrying him to their barracks, were enjoying the sacrilegious thought of eating that which the deluded Papists held sacred. But no sooner did they place him on a gridiron, than he bounded away to his own dear well, some mile or two distant; where to this day he bears on one side the mark of the gridiron!

takes a part, and gives back the rest. Ordinarily the worshipper is content with an invocation and *namaskára*, an obeisance, in which the hands are joined and raised to the forehead, which is bowed low. If, however, the occasion be solemn, or his devotion great, he performs the lowlier *sashtanga*, in which the forehead, chest, shoulders, both hands and both feet must simultaneously touch the ground. There is no united worship. At the evening sacrifice it is usual to ring a bell, which sounds loudly over the town: then the musicians and temple-women, assembling, play, dance, and sing before the idol. About the orgies, enacted in the temples of India, quite as much has been published as is useful; but those who have done so have this justification, that it was necessary to lay bare all the abominations which riot in Hinduism, that the ties by which our authorities had bound it to them, if proof against every milder agency, might be burnt up at last by shame.

In India no god is thought sufficiently honoured without a *parashé*,—a day of devotional festivity, once a year. With modifications from our climate and local customs, the *parashé* is fairly represented by the Patron, or annual feast-day of a patron-saint or tutelar god, in Ireland. The Patron is the great day of the year, a day for the exercise of all kinds of devotion, and the indulgence of all kinds of depravity, for penances and gambling, for paying vows and drunkenness, for masses and match-makings, for invoking saints and feeing showmen. Such also is a *parashé*, but with more parade, less intemperance, and abundantly more of nocturnal license. Goobbee Appa being far above the

ordinary rank of tutelar divinities, his *parashé* extends over a whole week. One day, as this festive season was drawing nigh, we saw a train of well-dressed natives make for the mission-house, led by the *sherti* and *yajamâna*, the two great municipal authorities. Leaving their slippers at a short distance from the house, they advanced with that graceful formality in which they excel, made low *salaams*, presented some limes and plantains, and proceeded to pay compliments, which, if "done into English," would sound more ludicrous than respectful. After a while, we were informed that they had come to ask a favour, which they hoped would not be denied. The *parashé* was approaching; but one wheel of the great car was damaged, and it was found difficult to obtain suitable timber for a new one; for they are not made with spokes, but of solid wood, in the ancient fashion. When Mr. Hodson was building the mission-house, he had bought and felled some trees; one of these remained; it was the very thing for their purpose; and now they had come to entreat that we would "be favourable, and command them this tree." In vain did we protest that we could not in any way abet idolatry. All who have been in India can bear witness to the importunity of a Hindu applicant. Resolute as a barrister, and pertinacious as a tax-gatherer, he assails you on every side. He seems to make it a point of honour not to take a denial: it is a reflection on his power of flattery, and knowledge of character,—on both of which points they pique themselves. You are entreated, wheedled, and bepraised, until, if you persist in refusing till he is beaten off, you feel very much as if you had gained a battle. In the present

case they did not want for numbers, for skill, or perseverance; they argued, they prayed, they cajoled; but all in vain; it was a matter of conscience, and we stood there. At length, one who was very familiar with me turned to me, and said, "Are you not my friend?" "Certainly." "Well, then, as you are my friend, and as you have an objection to give the tree to Goobbee Appa, you can just make a present of it to me, and I will be very thankful for it." This was a stroke of rhetoric by which they plainly thought I was fairly placed in a dilemma. "It would delight me," I replied, "to give you any private mark of friendship; but, knowing that you want it for the service of an idol, it would be a sin for me to give it to you; and one must not commit sin for any friend." This evidently disconcerted them; and I added, "Now, does it not strike you as strange? We came here for the very purpose of turning you from the worship of Goobbee Appa, declaring that he is only an image; that he can do nothing for you; that, indeed, he can do nothing for himself. We have never asked anything from Goobbee Appa since we came, yet we have everything we want; but here comes Goobbee Appa to us, saying, 'I am a very great god, and have many worshippers; they are going to make me a grand feast, and I want to go and see them; but I am lame, and cannot go: won't you help me?' Is it not strange that Goobbee Appa should come as a petitioner to us?" They soon took leave, with obeisances far less dignified than those of their introduction.

Before the day for commencing the feast, the top of the car was towering among the trees. The prints

which every one has seen of the car of Juggernaut, give a just idea of the vehicles used for idol-processions all over the country,—a ponderous structure of wood, rising through several successive stories, in the form of a tower, and resting on four giant-wheels of solid wood. On the appointed day, crowds of people flocked to the sacred spot from every direction. They had no means of shelter, and therefore selected a place under some tree where they might sleep, engaging it by pre-occupation. With the devotees was a proportionate number of jugglers, showmen, and gamblers. Those swinging-boxes popular in English fairs, (called, I believe, "whirligigs,") in which four persons ride at a time, and, revolving vertically, are in turn above and below, were whirling boisterous freights of urchins. Not a few were enjoying the excitement of cock-fights and ram-fights; the latter being a favourite pastime with the Hindus, but the former chiefly practised by the Mohammedans. Early in the evening, when entering the eastern gate, we were met by a stately procession. A band of music led the way. Then came a train of ladies, the wives of the merchants residing in the fort, who had exhausted their own skill and their husbands' wealth to make them splendid. Their silks were costly, their jewels profuse; they shone with gold; and as they walked, silver music tinkled on their ankles. Their cheeks were saffroned, their teeth vermillioned, and their black eyes surrounded with a circle of auxiliary blackness. They marched with a slow and reverential grace, each lady holding up on the palms of her hands (*palmas supinas*) two vessels, some of polished brass, some of silver, on which were tastefully

arranged bananas, mangoes, pineapples, pomegranates, limes, oranges, and tufts of cusha-grass, or the sacred *tulasi*. They were on too high an errand to walk on vulgar earth. Before them a man spread upon the ground a succession of silk cloths, such as are used by the ladies for garments; and on these garments, thus strewed in the way, they walked the whole distance from the fort to the temple, about half a mile, that they might with becoming reverence approach a presence so august as that of Goobbee Appa, the old schoolmaster!

Towards nightfall the crowd stood densely over all the ground spreading before the temple. A small *muntapa*, or domed canopy, supported by stone pillars, and covering a small raised platform, stood about half way between the temple and the car, and was used as a station, or resting-place, for the idol. Flambeaux gleamed on the dark faces and variegated attire of the thick mass. Hosts of musicians tortured the air into excruciating cries, as if it were in mortal pain. Groups of gaily-dressed temple-women added to the brilliancy and to the blackness of the scene. Gaudy flags hanging out from the car waved gently, and a thick rope from each side stretched far before it. Between it and the *muntapa* we stood preaching the gospel of Christ, to a serried crowd of listeners. Presently came a priest, bearing in one hand a small brass vessel, and in the other a bunch of cusha-grass. He walked slowly round the car, and round the *muntapa*, which he then ascended; and, dipping the bunch of grass into the holy water, carefully sprinkled the spot on which the god was about to rest. By this rite India seemed brought into present and vivid connexion with ancient and

modern Rome. One might have been watching a Romish priest, either of our own day or that of Virgil. Who ever witnessed the close of burial-service in a church on the Continent, without being vividly reminded of the very same scene as occurring at the grave of the hapless minstrel?—

> Idem ter socios purâ circumtulit undâ,
> Spargens rore levi, et ramo felicis olivæ:
> Lustravitque viros, dixitque novissima verba.
>
> *Æn.*, lib. vi., v. 230.

A moment or two after this, a band of music issued from the temple, accompanied by a blaze of torch-light, and a troop of dancing girls. Priests and wealthy votaries followed; then, borne on men's shoulders, a richly-caparisoned litter, on which sat the idol, covered with a graceful canopy. On each side were men plying large fans, to protect him from dust and flies. The march was slow, solemn, and devotional. It might have been the ark of the Lord. On reaching the *muntapa*, they rested the god for a few minutes; and then, reaching the car, began to pace round it a slow circuit; but when approaching us, the litter suddenly stopped, and the men moved back a few paces, as if dragged involuntarily. This was repeated several times, leaving us to infer that the god was offended at our presence, and would not proceed; but not choosing to see the cause of his reluctance, we kept our ground; and at length some of the great men, seizing on the pole of the litter, pulled it heartily forward, by which zeal the indignation of Goobbee Appa was appeased; for he forthwith proceeded, and in a few minutes was upon his lofty throne. A suite of priests surrounded him, and

the fan-men fanned lustily. Immediately on seeing him seated, the people took hold of the ropes in front, forming two long lines of men, with a space of three or four yards between. In this space the musicians and temple-women took their post. At this moment the car, with its enormous height, its waving flags, and the airy figures perched on high, towered impressively in the glaring torch-light. The long avenue of human beings in front, centred by the group of dancers, gave it a touch of new and wild sublimity, before which curiosity, wonder and weeping struggled for the mastery. The band struck up, the dance began, the men at the ropes gave a shout, and stretched to the draught. There was a moment's pause: then the ponderous vehicle trembled, creaked, shook, and rumbled forward, with a heavy crashing. At that instant rose from the centre to the utmost edge of that throng a loud, reverent, but exulting cry, *Swami! Swami!* "O God! O God!" Thousands of voices swelled that invocation; thousands of heads bowed low. The lost race might have risen to hail the Redeemer, "travelling in the greatness of his strength, mighty to save." Then from all sides a shower of plantains rained on the car; and, as they rebounded, happy, happy did he seem who secured a fruit sanctified by the touch of a thing so holy. The moving tower rumbled on, and the hapless people shouted. Little did they think that that wretched idol was both the sign of their darkness, and the instrument of their undoing. Their lamentable glee, and the magnitude of the car, irresistibly reminded you of the Trojans rejoicing about the pompous trophy that carried, but concealed, their destruction. And these were men!

And they were our fellow-subjects! And they must die, and meet God! And our fathers were once as dark as they! A procession of maniacs to hail madness, or of skeletons to honour famine, or of corpses to welcome plague, could hardly touch you with a stranger or sadder thrill.

After the first great day, the attendance on the feast diminished; but, throughout the week, the ceremonies went on. Every night the idol made a procession, the vehicle being varied each time,—an elephant, a kite, a peacock, and other forms, being called into requisition. Every evening we had a large and attentive audience. We pitched our little tent close by the ground, in order to be near the people during the heat of the day, that we might have opportunities of conversing with them. But our house was such an object of curiosity, that the numbers coming to see it were quite sufficient to furnish us with a perpetual congregation. While we reasoned with them freely on religious subjects, we conciliated them by gratifying their curiosity. It is often said, by persons who ought to know the Hindus, that they have no curiosity; which is just as true as the favourite assertion that they have no gratitude. Their capability of the latter is not very often tested; and the existence of the former is frequently concealed by their good breeding, or their pride, which does not like to look ignorant. Everything in our house was wonderful; for the domestic inventory of a Hindu is complete when he has got four walls, a roof, a floor, a few water-pots and cooking-pots, a pestle and mortar to pound rice with,*

* This must not be fancied on the scale of a chemist's shop: the pestle is a hard stick, as thick and long as a man's arm.

and a hand-mill, exactly the same as is still found on the west coast of Ireland, and in some of the Scottish isles, under the name of a *quern*. A mat for a bed is a comfort; a *ratna cambli* (just one of our hearth-rugs) is the couch of the luxurious; carpets are for kings. The dry, clean floor is both chair and table; the plates are made daily as the meal is cooking, by stitching together a few leaves; knives are not needed to cut rice; practised fingers make good spoons; a Bramhan has as much notion of a fork as had that worthy Briton Caractacus; and a Hindu lady knows as much about a china service as did King Alfred's mother. The cloth that covers a man by day, wraps him by night; a custom plainly common in the time of Moses, from Exod. xxii. 26, 27: "If thou at all take thy neighbour's raiment to pledge, thou shalt deliver it unto him by that the sun goeth down; for that is his covering only, it is his raiment for his skin: wherein shall he sleep?" If a man be so luxurious as to have under him a mat or rug, he is ready, at a moment's warning, to roll up his bed, put it under his arm, and walk away. He sleeps as comfortably under a tree as in a house. The houses of the rich differ from those of the poor only in being larger, furnished with better vessels, a few mats and rugs, and perhaps one or two silver drinking-cups. Those who came from remote villages stared at our rooms with pure bewilderment. The table first took their notice: "What is that? What is it for?" And hard it was to make them comprehend how we should need such a cumbrous thing to eat off, a matter they managed with perfect comfort from their knees. A bed was wonderful, and a chair mysterious. The books

were objects of special marvelling. One day a fine old man, with white hair, after having wondered over and over again at everything in my study, from the steel-pen to the Venetian blinds, said, pointing across the verandah to Mr. Male's study, "May I go into that house?" He had scarcely entered, when his eye fell on the Centenary volume,* which lay on the table, beautifully bound in red russia, with gilt edges. "What is that?" he cried; pointing to it with delight and surprise. "A book." "A book!" exclaimed the old man; "that a book?" The printing astounded, and the portraits enraptured him. "What do you do with it?" he cried; "What do you do with it?" "Why, read it, to be sure." "What do you do nothing but read it? Oh, if we had it in our village, we would do *pooja* (worship) to it!" Some of them had heard of a watch, and craved a sight of that strange thing. They would eye it at a distance, hearken to the ticks like a child, then eye it again, venture to take it in their hand, turn it round and round, and watch the hands,—uttering notes of high amazement. What was it? How did it know the time? Where could it be got? How long would it live? And a flood of such interrogatories poured upon you. They would insist that it was alive. "Look at it, it moves; listen to it, it speaks: if speech and motion are not attributes of life, what are?" They can themselves tell the time with remarkable exactness, either by the length of their shadows, or by the position of the sun in the sky,—a hind of horography ill adapted to our cloudy regions. As the length of the days does not vary more than

* "Centenary of Methodism," by Rev. T. Jackson.

thirty minutes during the course of the year, they suppose it to be perfectly equable. Owing to this my watch was in danger of losing its character; for when, in December, I happened to say it was not quite six o'clock, although the sun had set, they replied, "Who ever heard of the sun setting earlier one day than another? No, no; the sun always sets at six; he must be right; the watch is wrong."*

Goobbee Appa is indisputably the most honoured god of the town and neighbourhood; but he is by no means the only one. To worship only one god, is not in the nature of Hinduism. A secret distrust of the favourite deity is manifested by a search after others. The temple of Goobbee Appa stands, as has been said, outside the eastern gate. A few yards within that gate, in the main street, an open building attracts your eye to an altar of the god Mileappa. Facing you, at the head of the same street, is a small building to the goddess Yellama. It is of mud, mean, and neglected-looking. But when the cholera was scourging the town, here centred the general hope. They did not take any medicine: they would say, "Medicine is for diseases; but cholera is no disease: Yellama just determines to kill a certain number of persons, and for that purpose puts a fire in their belly. To take medicine only enrages her, and makes her kill more." Sacrifices are esteemed the only remedy, and to these they had resort. I saw the heads of the buffaloes ranged before this disgusting idol, and the place around slippery with their blood. The

* This, of course, does not apply to the Jotishas, who well understand the variation in the length of the day. See *Vishtnu Purâna*.

priests managed to delay this sacrifice until the disease was abating; but the day after it was offered, it broke out anew. After a fortnight had elapsed without a case, they repeated it; but the next day a person was seized. This gave us a great advantage in reasoning with them. Where they are within reach of English doctors, the success of their treatment soon does away with the prejudice against medicine.

In the same street with this temple is a large one, with an immense image of Busawa, the ox. Few idols are more honoured than he: his temples are numerous, his worshippers everywhere. He is the *vahana*, or "steed," of Shiva. They say, that to honour the steed, is to honour the rider; and if they are not worthy to approach the supreme Shiva, they may yet draw near to his steed. Two huge bulls, as fat as they could live, were constantly perambulating the streets, with a seal on the hip, which served to attest their sacredness. They seem conscious that they are free of the whole town. You see them quietly walk up to the baskets of a grain-dealer, to levy a contribution, which he tries to make as light as possible by coaxing the god away; but woe to the profane wretch who would strike his sacred hide, no matter how heavily he may tax his stores! It has been put to me as a deep question in ethics, whether it were lawful to drive Busawa out of a corn-field; and if so, whether violence might be used. Once an arch ryot said, "Oh yes, it is lawful; for if Busawa were left in the field, he might eat too much, and hurt himself." Their veneration for these animals is very deep. Sometimes, while sitting in one of the shops,

a man has broken off the conversation, and run into the middle of the street, in order to worship one of them that happened to be passing. No crime is held so revolting as cow-murder. Had one of us killed a poor old woman of the out-castes, it would not have raised a hundredth part of the commotion that would have followed our getting a beef-steak, or a fillet of veal. Sometimes, when we had been preaching against sin, they would say, "You padres are certainly remarkable men; you have only one sin, but that is as bad as all ours: you are murderers; we have a great many sins, but we are not murderers." In this they alluded to our eating fowls and mutton; for with them all life-taking is murder. This prejudice is so deep, that I sometimes felt disposed to eat only vegetables; but was decided against that course from the consideration that it would be a concession of Scriptural truth, and would seem at least a recognition of the dogma, "All life is the same," out of which this prejudices arises. All that proceeds from the cow is holy. The domestic uses of her droppings have been already mentioned; but they have far higher offices: made into pills, and swallowed, they are highly effectual for inward purification. The *pancha-gavya*, or five products of the cow, including the nauseous with the pleasant, are, when taken by a penitent, (whose penitence, by the way, consists in taking them,) effectual, as the Abbé Dubois, quoting from a native author, informs us, "to the remission of all sins," even when "committed with a perfect knowledge." It is a wonderful thing to see a man with strong sense looking you full in the face, and confidently maintaining this mis-

chievous absurdity. Monday is specially sacred to Busawa, and on that day it is not lawful to put him to the yoke; but that rule is observed only by few.

In the very next street to the temple of Busawa, is one to Bala Râma,* one of the incarnations of Vishtnu. To a curse of this god the Bramhans ascribe the exclusion of their caste from the kingly office. He gave them the whole earth; and then, to test their generosity, asked for as much land as he could stand on, that he might perform austerities. They, with their characteristic greediness,—a disposition they no more seem to think of concealing, than a soldier thinks of concealing his bayonet,—at once refused, and began to upbraid him with the contemptible sin of *dataphâra*, "snatching back a gift." Incensed at this, he cursed them, to the effect that no Bramhan should ever hold the sovereign right of any land, and should enjoy it only by grant from a prince of inferior caste. Passing from this point through a narrow lane, you find a small mud temple, kept very clean, with an image of Mariama, the goddess of disease, in the same material. She is painted, and decked with flowers. In the fort is a temple to Hanamunta, the monkey generalissimo; and another to Shiva the Destroyer; or, as one of the Shastras calls him, "the fierce lord of devils." His images usually represent him adorned with coils of serpents, and a necklace of human skulls. The head of Brumha the Creator, which he cut off with his nail, is sometimes placed in his hand.

Besides these public altars, every house has its *pe-*

* There have been three Ramas; Parusha Râma, Bala Râma, and Shri or Dasharata Râma.

nates, they being selected according to preference. Of these, perhaps the most important is Vignayshwara,* the god of difficulties, of wisdom, and of gluttony. This hideous idol far outdoes Horace's fancy of a human head on a horse's neck. His form is perfectly unaccountable. An elephant's head rests stupidly on a monstrous rotundity of paunch, which a band encircles, and from behind it two little legs are poking, as if it were a boy hiding behind a hogshead, and holding on the top of it an elephant's head. The image is odious enough; but the explanation increases the disgust. Born from the excrement of Parvati, Shiva's wife, he was her door-keeper; having offended Kŭmara, he cut off his head, which loss Shiva repaired by decapitating an elephant, and giving him the severed member. He avowed an unnatural passion, and was doomed to perpetual celibacy. On a certain occasion he ate till he was in the act of bursting, when his brother Verabhŭdra snatched up a snake, and wound it round him, to save his life; which explains the band now encircling his body. Man is far fallen; yet one would think it impossible that he could worship such an image, with such a history. But the honours of Vignayshwara are not impeded either by his deformity or his crimes. He holds firm monarchy over the hopes of millions. It is his to give wisdom, and scatter difficulties: nothing can succeed without his smile. The ceremonies attending the various stages of life; the solemnities of marriage; the commencement of a journey, or a book; in fact, every important undertaking; must be preceded by sacrifices to "the lord of difficulties." One of the finest stanzas

* Called also Ganesa, and Pulliyar.

in the opening of the *Jymani* is in praise of his loathsome figure, comparing his countenance to the dawning day!

Another favourite household god is Vencartaramana, the idol of the great temple at Tripati, from which our government so long derived a disreputable income, in the shape of pilgrim-tax. The image used for family devotion is a copper cast, hardly so large as one's little finger. Many a time I was told that our countrymen thought more of him than all the gods, and that his English name was "the Collector," because he brought in such handsome revenues.

Krishtna, again, is a favourite family god. He is worshipped in an image not bigger than an infant's fist, which represents him as a creeping child, having both hands filled with butter, just stolen from his mother's dairy. This feat, performed at the age of nine months, you are soberly informed, was a proof of his divinity; as was also the fact that he had sixteen wives and sixteen thousand concubines. His history is a concrete of vices: from very infancy he rejoiced in theft, lying, libertinism, and murder, All his wives and concubines had children, every one of whom he killed.

Of all the domestic idols of Goobbee, there is none for number of votaries, or depth of zeal, to be compared with the Linga, a word we may not translate. Most of the people carry it on the chest, in a shining box of silver; but some have it bound on the arm, and some inserted in the hair. It is daily worshipped. Of all the inventions of Hinduism, this is the most flagitious, the most loathsome, the most unaccountable. One cannot but wonder into what strange chaos of lawless

imaginings temptation has borne him who first conceived this hateful affront to the conscience of man, to the dignity of God; or by what inspiration of satanic audacity he dared to utter the conception when formed, or by what diabolic pollution the heart of men was so corrupted, that it did not spurn with impetuous hostility a dogma so shameful, and scorch with the wrath of general society the wretch that ventured to propound it.

Perhaps to this head of *penates* properly belongs the worship paid to implements of industry. A workman, before taking up any tool in the morning, usually raises his hand to his head by way of reverence, that it may be propitious, and cheerfully serve his purpose. On the great day of the Gauri feast, every one brings forth his tools, the clerk his style or pen, the tailor his needles, the goldsmith his hammer, the blacksmith his bellows, the barber his razors, the carpenter his hatchet, the labourer his plough, the housewife her baskets, handmill, and water-pots; each, having gathered his own articles into a heap, presents an offering of incense, flowers, fruit, and grain; then, falling prostrate, invokes them as gods, and prays that they will continue to be propitious, and afford him the means of subsistence.

During the *deevarligay*, or "feast of lamps,"—and for confirmation of this almost incredible statement I am glad to refer to the work of the Abbé Dubois,—they actually go to the dunghill, place upon it a kindled lamp, with an offering of prepared rice, fruit, and perfume, and, with acts of reverence, pray that it may be propitious, and fertilize their ground!

The heart grows sick in relating these things; but how sick in beholding them! Yet the description is

far from complete. Sunday is specially sacred to Garŭrda, the holy vulture. On that morning I have often seen a number of Bramhans standing on the north side of a certain street, and looking intently to the sky. All the faces were intelligent, the air of some highly contemplative; and, marking their thoughtful looks and upward gaze, you would have supposed they were spurning the ways of vulgar men, and conversing with holy things. But suddenly one gives a signal to the rest: in an instant every head turns toward the point indicated; then the joined hands are lifted up like a child at prayer, and every lip utters the sacred invocation, *Swami*. And as they adored, the white breast and bright brown wing of the Garŭrda swept by. It was a sorrowful sight for a Sabbath morn. This bird is voracious, and useful because he preys on snakes: his sacredness makes him tame; but he is cowardly. He is the steed of Vishtnu, and his worshippers frequently address him by the name Hari, which belongs to that high dignitary. One of the Shastras calls Garŭrda "the Lord of all things moveable and immovable." Offerings of food are presented to him; sometimes by being placed on the ground within his sight, sometimes by being thrown up into the air, to be caught in his claws.

In the early morning I have passed an ant-hill, at the base of which was a hole neatly strewn with flowers. This hole was a temple, and these flowers offerings. The being whose presence gave awe to this unlikely shrine, was the potent Adi Shaysha, the cobra di capello. The utility of the cow and of the kite, the monkey's cunning and resemblance to the human figure,

have raised them to the very accessible elevation of heathen gods; and the serpent has gained the same distinction by his terrors, as did the crocodile in ancient Egypt. His image graces most temples, and some are reared to his sole honour. The most celebrated of these in the Mysore, and, I believe, one of the largest in India, is at Soubramanya, a place considerably to the west of Goobbee. There a spacious temple is devoted to serpents, who, under a long protection, have vastly increased, and crawl about every corner. A retinue of priests is in attendance, by whom they are plentifully served with milk, butter, plantains, and other agreeable nourishment. (How must a man feel, who is consecrated the priest of a snake?) This temple is very popular; streams of worshippers pour to its solemnities from all the surrounding districts. The serpent, great everywhere, is, on that spot, extolled as supreme. Not that they believe him to be so; but they look on flattery as on *ghee*,—they love it themselves, and think the gods must love it. No man of the higher castes will kill the cobra, in consequence of which they abound in the country. At Goobbee I have leaped on the grass within a foot or two of one; and we have had three killed in our ground in a day. One morning, when returning after preaching at a distant village, two men were passing whom I knew, and I entered into conversation with them. My whip took their attention: they said, the thong was evidently made after the pattern of a snake. "Yes," said one, "it is exactly like the one we have just seen." This led me to inquire; and I learned that they had just watched a cobra into a hole near the mission-house. "Why did you not kill it?" I asked.

"Kill him!" they said, "kill him! he is our god!" They were quite willing, however, to show me the hole, and stood quietly by while I called my horsekeeper; when we filled the hole with water, waited to see if he would rise, and poked him with a stick, on which he jetted up his head, and was speedily despatched. Just as we set upon him, our two friends uttered some smothered exclamations; but, as soon as the danger was over, came forward, and, looking at certain marks on the neck, said, that a person would only survive his bite for three hours. This they professed to determine by the marks, saying that they indicated the age, just as those in the horns of a cow: and that the virus was more or less powerful according to age. On another occasion one was discovered in the "go down," or store-room, among bottles. Being dusk, it was difficult to find him; but, by carefully removing the bottles,—no very pleasant task, knowing what was there,—we at last disturbed him: he hissed loud, and made a rush. Mr. Squarebridge, who happened to be with us, fastened him against the wall with the point of a stick; but in a position so awkward, that it was impossible to get a fair blow at him; and should he slip, some one of us must suffer. By taking short hold of the end of a whip, I managed to get at his head, and hit pat, pat, pat, till he seemed fairly stunned with the number of little blows. Then we let him free, and soon finished the contest. It is a singular illustration of the way in which depravity perverts advantages, that the low-castes kill this reptile, and the high-castes adore it. When my moonshi, a Bramhan, learned, on the morning just referred to, what had been done, he quite lost his temper;

insisted, with much excitement, that I had been guilty of a great crime in killing his god; and maintained that the serpent never injured any one: if it did bite a person, and he died in consequence, it was only because his fated time had come. They give it great credit for intelligence, asserting that if any one attack it, and fail to kill it, no matter where he may flee to, it traces him out, and never rests till avenged by his death. The ryots are afraid to leave the skeleton in the fields, saying young serpents rise out of every bone: they burn it. They also believe that the cobra di capella is only the female, pointing out as the male a larger snake, which is not venomous, but defends itself by lashing with its tail; for which reason it is called the whip-snake. I have found these generally to measure from eight to nine feet, while the cobra seldom reaches seven. They add, that if any one happen to overlook these two snakes when pairing, they both give chase, and do not rest till he is destroyed.

Surely this is enough! enough for wonder, for grief, for satiety! but not enough to exhaust the manifold idolatries of Goobbee. Inanimate nature is not overlooked in the general lavishing of worship. In spring, when the crops are rising, it is usual to hear frightful noises about the fields at night. These proceed from ryots offering sacrifices to Bhoomi, the earth, who is a goddess. The victim is usually a goat, part of which is burnt, and in the dark the ashes are carried to the fields, on the corners of which they are placed in tessellated marks, to warn away evil spirits, witchcraft or blighting winds: during this ceremony they set up horrid yells, to scare off devils. In the Goomsoor country,

a part of India as yet but little known, this sacrifice demands a human victim. He is placed alive in the midst of a host of ryots, each armed with a knife. They tie him to a post, and at a given signal rush upon him; each man cuts from his person as large a piece as he can obtain in the struggle, and immediately divides it among the people of his own village, who hasten to their fields and bury in the soil the morsel of palpitating flesh. In one part of the Himâlaya it is done by making a rope fast at the head and foot of a precipice a mile high, and forcing the victim to descend. Should he alight on his feet, he is free; but if he lose his balance, even though still holding on sufficiently to prevent his being killed by the fall, he is at once dispatched on reaching the ground. If, as is most likely to be the case, he parts from the rope, of course he is dashed to pieces.*

The sun, too, is a god, and a great one. The most sacred of all *muntras*, (forms of prayer,) the Gayatri, is an invocation of this luminary. Its virtue is wonderful. "He who, seated opposite the sun, repeats it, is liberated from fear and sickness; misfortunes cease; and unlawful meats, drinks, intercourse and connexions become pure and lawful."† Of the sun's private history, the following curious passage is given in the *Hari Vamsha*. His wife, the daughter of the Hindu Vulcan, found the heat of her situation so intense, that, after bearing it till amost consumed, she at last created out of her

* Wallace's "Memoir of India."

† The *Surya Narayana Upanishad*, as quoted by Dr. Wilson, in the "Exposure of Hinduism."

own shadow a goddess, the perfect image of herself, and set off to her father's house. He refused to sanction the crime of forsaking her husband, by admitting her; on which, rather than return, she transformed herself to a mare, and betook herself to the wilderness as a solitary ascetic. Surya never suspected the cheat that had been played upon him until, after the lapse of years, one day Yemma, his eldest son, came to him in great trepidation, complaining that his mother had cursed him with a severe doom. Surya demanded of his wife why she had pronounced such a doom on her son; and she justified herself by saying, he had raised his foot to kick her. He then told Yemma, that the curse, being pronounced, must take effect; but asked how he came to think of kicking his mother. He said, he was provoked by her constant partiality in dealing with the children, indulging the younger ones, but being very harsh towards him. The mother was now called to account, and in her confusion acknowledged that she was not the mother of Yemma, but a counterfeit made from her shadow. Grieved and indignant, Surya hastened to his father-in-law, and bitterly accused him of concealing his wife. This he denied; telling him, he was so insufferably hot, she could not live with him, and that no power could induce her to return; for she had refused even when driven from his door in disgrace. Plunged into the utmost sorrow, poor Surya asked if, with all his knowledge of the arts, he could not discover means of reducing him to a bearable temperature; on which the great mechanic put him on his grindstone, and ground

off an immense host of rays, which he then collected, and forged into that terrible and mysterious weapon, the *shackra* of Vishtnu.* The fugitive goddess was then sought out; and, perceiving the fires of Surya so greatly moderated, was prevailed upon to resume her natural relation. When I first read this strange tale, it was in the presence of two Bramhans, to whom I freely expressed the incredulity and amusement to which it gave rise. This they both resented, and vindicated the truth of every word with what an eloquent writer, speaking of Charles Simeon's preaching, has called, "a contagious intensity of faith." "It must be true," said they; "it is in the Shastra; the Shastra cannot lie. If the Shastra lied, where could truth be found?" It is easy for those who have been educated in a land of Bibles and free thoughts to say, with regard to the absurdities of superstition, "They cannot believe them." Yes, they can, they do: men can believe anything.

The moon is not passed by: *he* is a god; and his functions are not confined to nightly illuminations; but when the rain has been exhaled from the earth, he receives and accommodates it, till the proper time for its return. The clouds also are personated in the god Indra, who holds them chained up in eight great masses, and at his pleasure looses any one. When he angrily smites them with his bolts, it thunders; and the rainbow appears when he draws his bow. The wind is a

* The Vishtnu Purâna adds—"The trident of Shiva, the weapon of the god of wealth, the lance of Kartikeyá, and the weapons of the other gods; all these Vishwakarma fabricated from the superfluous rays of the sun."

god. The sea also is a god, whose waters are signally efficacious to purify,—a single bath sufficing to wash away sin. On the coast, cocoa-nuts, and other offerings, are cast upon his waves.

Then the poor soul of the Hindu crouches before several members of the vegetable family. It has already been said, that the noble old banyan, before described, has beneath it an altar to its own honour. The banyan-tree is everywhere held to be divine. The *ararlé*, or *ficus religiosa*, is worshipped as an *avatâra* of Vishtnu, who took its shape with the same object as Jupiter had in becoming a swan. The beautiful margosa, also, is included in the pantheon. It is not unusual to see these two trees growing so closely together, that their branches intermingle, and surrounded by a low wall, in token that they live in wedlock, the marriage ceremony having been performed by a priest, with all due solemnities. The herb *tulâsi*, which is used at almost every religious festivity, is a transformation of one of Vishtnu's unlawful wives, to whom he was so devoted, that, when metamorphosed into a plant, he resolved to abide with her, and for that purpose became the *shalagrâma*, a black schistous stone, which is, on this account, held to be adorable. Mora Bhatta Dandhekara, in ably defending the superstitions of his country against Dr. Wilson of Bombay, asks, "How can his (God's) honour be tarnished by saying that fire, the cow, the *shalagrâma*, and other things, so holy and purifying, are his very glory?" These vegetable deities have sacrifices presented during the feast of Deevurlagay. The cocoa-nut tree is appropriately held to be an emblem of gratitude; for man brings it water when young and weak, which, when strong, it

yields him back in a delicious form. It is highly valued and frequently personated, but does not receive divine honours. I am not prepared to say that it is never worshipped: no doubt it is; for you can hardly fix on an object, animate or inanimate, useful or noxious, but, some time or other, has the soul of a man cringing before it, and calling it god.

These are the leading features in the exterior of religion in Goobbee. It is a dark picture; very dark, if considered merely as to appearances; but how woeful does that darkness grow, when we think that it is not a bare shape, not a fugitive phenomenon, but the living representative of souls, of their thoughts, their belief, their hopes, their morals; of the attributes they assign to God, the views they have of their own destiny, the principles on which they guide their life. What state of soul is represented by bull-worship, by monkey-worship, by vulture-worship, by serpent-worship, by implement-worship, by tree-worship, by the worship of the dunghill? What state of morals is represented by the worship of Vignayshwara, and Krishtna and the Linga? What state of hope is represented by the worship of the fierce and filthy destroyer Shiva? Who, oh who would enter into one of those craven bodies, and be a hapless soul, looking out upon a universe in which every monster is a god, and every beast an equal; in which men are vile, and gods far viler; and in the whole of which the weary eye cannot rest on one pure being, worthy to be loved with all the heart, and soul, and mind, and strength? Is there any curse one should feel more dreadful than to be transformed into one of these dark souls, bereft of all knowledge of the one

holy and true God, of redemption, of the resurrection of the dead, or the life of the world to come; haunted by a countlesss horde of vicious powers, each one demanding our dread; looked down upon and bidden to crouch by soil and sea, by tree and beast, by bird and snake; and yet our immortality left with us? The soul shrieks at the very thought, and cries, "Make me miserable, or make me mad; but oh do not make me a thing like that!" Yet such are the souls that dwell in Goobbee, and such are the souls that, in our wonderful realm of India, inhabit a thousand plains.

In the vicinity of Goobbee were above twenty towns and villages, which were formed into a regular circuit, and a plan made, by which they were visited in turn. Biddiri was a considerable market-town. Chayloor, a large village, with about thirty temples. Whussa-Hully, Nertagoonta, Naramungala, Lekenahully, and several others, were populous villages, each with its gowrda, or head-man. The gowrda is of the same caste as the rest of the villagers, but has great honour paid him from his office: he is the umpire in disputes, and the medium of all negotiations with government. In Whussa-Hully was a shakedar, a kind of revenue and police magistrate, who holds jurisdiction over ten gowrdas. A few miles off was Cudaba, a considerable town, much under the influence of Bramhans, and the residence of the amildar, who is judge and collector for a talook, a district including many shakedars. The amildar was a civil and intelligent Mohammedan, who had four wives, and married the fifth while I was there. Chinchethully was a neat village, mainly inhabited by

potters, who work in the open air, shaping their ware with great dexterity on a simple wheel fixed horizontally, and revolving close upon the ground, so as to permit the workmen, according to custom, to sit. The pots are burnt in large open ovens. They make tiles, water-pots, and cooking pots; but the fine wares and endless variety of articles manufactured by their Chinese and European brethren are unknown. Their most curious article is a large vessel for holding grain, much the shape of a Chinese jar, and capable of containing several gallons.* One hamlet was inhabited wholly by stonecutters, who are a low and ignorant caste; and, if I remember rightly, one of the few castes that permits a second marriage to young widows. Another hamlet was occupied by shepherds, who rank far below the cowherds. They have about them none of the romance belonging, in our imaginations, to that primitive calling. Once, in the dusk of the evening, I saw a man running along the road, with his whole flock in close pursuit, when, coming up to us, he crossed the road, and was followed by every hoof: he stood still as we passed, and they all clustered behind him. It strongly reminded me of the Saviour's words, "My sheep hear my voice, and follow me."

Besides the places close about Goobbee, we included in our plan Toomcoor, a large market-town, about twelve miles off. It is the residence of the superintendant of the Chittledroog division, and, in consequence, much resorted to from all the surrounding country by those who have any litigation, or other at-

* A vessel of like size and shape is shown in Colchester Castle, as of the times of the Romans.

traction to the seat of authority. It would be an important post for a missionary, could one be given to it. We also visited some villages in its neighbourhood. I cannot pass over this town without naming one affecting occurrence. Close by the travellers' bungalow, far from any place where Christians bury, stands the lonely tomb of a British officer. One morning, about three o'clock, Mr. Jenkins was called up by a man, who delivered a note, dated Toomcoor, from a lady with whom he had some acquaintance, in which she informed him that her husband was dead, and begged he would hasten to her assistance. He found that Captain —— had left his regiment at Hurryhur, to accompany his wife to Madras, who was obliged to go to England, by a total failure of health. Their three children were with them. On their route lay Chittledroog, where the cholera was raging. When between it and Toomcoor, Captain —— was seized with those symptoms, dreadful anywhere; but doubly so on a lonely march. They urged on in hopes of reaching Toomcoor; but when seven miles from it, his sufferings became so great, that he could proceed no further. The bearers laid him down on an open plain without either house or tree. He could not, for agony, remain in the palankeen: he writhed upon the sand. For hours he lay there enduring the pain of the disease, aggravated by the bare ground and burning sun. His poor wife was too feeble even to walk: she could only watch and weep. Shade, or help, or friend, she had none. The only white faces near were those of her children, whom she felt to be already fatherless. They now came to mourn over papa, and now went off to play. There sat that weakly

lady, hour after hour, watching her kind and excellent husband torn with pains, till, at last, he lay a corpse on the lone road side. She got the bearers to carry their sorrowful burden to Toomcoor, certain, at least, of all that Christian hospitality could do, in the house of the estimable Captain Dobbs. But he was from home, and the servants in charge, finding she had a dead body with her, refused admittance. The travellers' bungalow, only just built, was incomplete, damp, and unfurnished. Thither she went, her only care being how she could place the remains of her husband in a decent grave. She could not get any one to procure a coffin, or aught else, fit for interment. She was ill and weak, and not able to bully the Mussulmaun attendants, who care little for a woman in sorrow. Happily, she remembered there was an Englishman within twelve miles. Mr. Jenkins soon obtained the things necessary for burial, and committed the body to its lonely home. It was an affecting funeral; but hope, far better than a crowd of mourners, was there. Captain —— had long been seriously disposed, but a few months before had evinced a decided religious change. For some days he had seemed to be under a presentiment of death, and spoke of its coming with a Christian's confidence. The same evening the widow proceeded on her sorrowful journey.

At the distance of about twenty-five miles from Goobbee, is the town of Coongull, with a population of about seven thousand, a considerable manufactory of silk, and a government depôt of young horses intended for the army. It is situated on a noble tank, ten miles in circumference, the shores of which are variegated with

groves of date and mulberry, clusters of bare rock, and, in the distance, blue mountains, among which towers Shivagunga. Morals in India are bad, very bad; but in Coongull they are lower than even the common level. A large proportion of the inhabitants are Mahommedans, and several of the horsekeepers are Roman Catholics. These have a small chapel, with suitable furniture of idols; and it is no injustice to them to say, that not in any one particular of knowledge or morality are they before the worst of their neighbours. They are favoured with an occasional visit from a priest residing at Mysore, who, after the habit of the Jesuits, calls himself an European Bramhan, and maintains toward the people the relations implied by that caste. If his teaching were aimed to make the people wise and good, it was utterly impotent for that; but it bore the indubitable voucher of genuine Romanism, in a talismanic power to make bigots. The man who could not make a bigot, would be a poor agent of Popery. This priest fully authenticated his mission; for while heathen and Mohammedan came to hear the word of God, not one of his people dared. The curse of God and the priest, denial of absolution, penances, purgatory, and hell, are mighty things with an ignorant man, when put before him, not to check a passion, or enforce a virtue, but to aggravate a fictitious sin, or rouse a feeble prejudice.

In 1839, a piece of ground was obtained at Coongull, on which a house of two small apartments was built for a missionary, and, close by, a similar one for an assistant missionary. In the opening of 1840, Mr. Squarebridge and Mr. Webber were appointed to the station.

It was considered part of the Goobbee circuit; but, owing to the distance, the work was conducted on a separate plan. Here the villages lie even more thickly than round Goobbee, and about forty of them were embraced in a regular circuit. They were populous; many of them, besides agricultural pursuits, rearing silkworms and spinning silk. They were every one open to our fullest labours.

Measuring from Chayloor on the north, to below Coongull on the south, the length of our circuit was about forty miles; from Toomcoor on the east to the most westerly point, the breadth was more than fifteen. It was not possible to bring every place within these limits under regular cultivation; but only the most important towns, and the villages near to Goobbee, and Coongull. Exclusive of villages, the towns alone of the circuit embraced a population full four times as large as that of Tahiti,* where a whole colony of missionaries laboured for half a generation, patiently waiting to see fruit, and saw it at last. The population of the circuit was far greater than that of some whole groups in the South Seas, and certainly not less than that of New-Zealand.† Then these were not isolated from all external influence. The difference between a circuit like this, formed out of the midst of India, and one in Tahiti, or Tonga, is, that the one is an island in an ocean of salt water, and the other is an island in an ocean of human beings. In the one case every impulse given terminates at the beach, whence it is reflected back, to increase the commotion within the narrow

* Tahiti has 16,000. † Computed at 100,000.

compass: in the other, when it has reached the boundary-line of your circuit, instead of travelling back to the centre, it goes on, and on, and on, for a thousand miles, giving a feeble, but momentous, disturbance to those cumbrous prejudices which have crushed down, for ages, inquiry and improvement. You cannot, in India, concentrate your influence under your own eye: it goes far beyond you, and spends much of its strength where you cannot follow it. This necessarily gives your results slowness; but it gives them width. You are not so likely to convert a town in ten years, but far more likely to convert a hundred thousand towns in a century. At Goobbee we had no mission-station on the east nearer than Bangalore, sixty miles; none on the south nearer than Mysore, ninety miles; none on the north nearer than Bellary, about two hundred miles; and none on the west nearer than Mangalore, the same or a greater, distance; and yet every spot enclosed in these wide outlines, is just as open to the gospel as a village in Yorkshire or Cornwall. There is not a place where a single missionary might not go, and though the foot of white man, or the name of Jesus, had never reached it before, he might proclaim his entire message, not only with safety to his person, but with the certainty of commanding respect for his doctrines. There never was before the church such a field. To leave it untilled, is shortsighted, and scandalous neglect. When we turned northward, the thought was appalling: it was like facing an ocean. Between us and the limit of India, the vale of Cashmere, lay about fifteen hundred miles of the finest and best-peopled country in the world; but, drawing a line direct north from Goobbee,

it did not touch a single missionary post, but at Bellary. Hundreds of miles to the east of this line, a few stations were lying far scattered. To its west were some at Bombay, Poonah, and Guzerat; but, taking the city of Nagpore as a centre, we could sweep a circle of three hundred miles' radius, without touching one post, except a solitary American missionary at Jaulnah. From Nagpore to Jeypore, another capital, is quite five hundred miles, in which whole course is no missionary; and round this centre, again, you can draw the same terrible circle of six hundred miles' diameter, including only the single station of the Church Missionary Society at Agra.

Such was my circuit, and so situated: its freedom from the interruptions incident to an European settlement, its exclusive intercourse with the natives, its unequalled facilities for studying them, and its boundless opportunities for spreading the gospel, all combined to make it just such a field as a young missionary might rejoice in; and if there were a feeling in his heart to be stirred, that field would stir it. The people are courteous and civil, subjects of our own government; bowing to us as the most powerful, and confiding in us as the wisest of nations. They receive us with frankness, and treat us with respect. Their towns and villages are as open to the missionary as to the Bramhan. He may come at any hour, stand in any place, handle any subject. Business will make room for him in the market, amusement will yield to him in the feast, devotion will not hunt him from the temple, he may stand at its door and illustrate his argument by the idol they are then worshipping. Close by the idol car he may

proclaim Him who sitteth on the circle of the heavens: by the fire where they are performing penance, or the altar where victims are yet reeking, he may tell of the one atonement. Everywhere, not only safety, but respect, awaits him. There never has been, in the history of the church, a field so perfectly open in the midst of a great heathen country; there never can be another field more open; and there never can be but one so extensive,—China. On this field meets every element of exciting interest: it is a field where a beautiful country is defaced with obscene idols, where gentle manners are deformed by rank depravity, and keen intellects are stultified by drivelling superstitions. The intelligence, polish, and gentleness of the people, make the darkness of their souls a thousand times more frightful. There is no savage congruity between their superstitions and their manners. You are shocked by the alliance of education and darkness, of polish and debasement. A man makes an elegant bow, pays a graceful compliment, discusses metaphysics, writes poetry, calculates an eclipse,—and worships a snake! The abruption is horrible; the shock far greater than to see a similar act done by a savage who never wore a robe, nor saw a letter. In the one case, Satan stalks as a marauder; in the other, sits as a king, with literature, science and antiquity adorning his throne. This civilized, lettered, accomplished idolatry, is the most startling thing on earth, man's worst curse, Satan's highest triumph. It should thrill and rouse us. To see naked, tatooed savages, with fiendish yells, holding a cannibal feast on some wild island, would be horrible,

yet it would be consistent; but who could bear to see courtly ladies, in the aisle of a cathedral, and to the sound of Handel's music, eating human limbs? The darkness of the Hindus demands the gospel; their accessibleness invites it. It is true, that by castes and by families, they are in firmly concreted masses; but they lay bare the surface to our operations, and already a quivering passes throughout the entire bulk which attests it, that nothing is needed but a strong and continuous shock, and it will all rend. But to give and sustain that shock, ought not to be left to the hands of a few. The labourers are few, lamentably, shamefully few; but they faint not. They sigh that they are few, not because they have a single fear of ultimate failure; but because, from their fewness, tens of millions must die before they have once been reached. This makes them mourn, it bows their strength, it tears their hearts, it shortens their days, it makes them indignant with money-clutching Christians, it makes them cry to God. But as the faint labourer, with the wide field round him, kneels and lifts up his weary trembling hand, there comes upon him a kind of assurance that the day of redemption draweth nigh, such as no other can feel, and such as no doubt can encounter. The prayer of a missionary, with thick masses of benighted souls on every hand, is the most poignant, but the happiest, of prayers. A hundred griefs pierce him; but every wound makes entrance for a new balm. I am sure Mr. Jenkins will never forget the feelings we used to have, when meeting every afternoon to plead together with God, on behalf of the poor souls that were sitting

in the shadow of death before our eyes. There was heaviness and bleeding of heart; but oh, there was with it an assurance as bright as heaven, that God's good word would accomplish its mission, and that truth and righteousness, peace and mercy, would one day overspread the land that was now so mournful.

CHAPTER VI.

OUR WORK.

THE essential preliminary to the entrance of a missionary on his work, is the acquisition of the language spoken by the people among whom he is called to labour. Many have adopted, as a substitute for this, the plan of preaching through an interpreter; but that expedient has never been resorted to in our Canarese mission, a fact which proves that it is not indispensable. Many grave objections lie against it: it is cumbrous;

it leaves every truth uttered dependent, for its correct transmission, on the talent or fidelity of the interpreter; and, by cherishing in the missionary a habit of self-distrust and reliance upon another, places him in danger of contracting an incurable embarrassment. It also removes the powerful motive to study, which would be supplied by the feeling on his part, that, till sufficiently acquainted with the language to preach, he is utterly useless; and thus, though appearing to anticipate the time of commencing his public ministry, it really postpones, and that indefinitely, the time of his doing so in the only way that can be either happy to himself, or effective for his purpose. Let two men of equal talents begin at the same time in the same language, the one by using an interpreter, the other by deferring all attempts to preach till his progress enables him to venture, and it will be found that, at the end of three years, the latter has delivered far more sermons than the former; and not only so, but acquired a freedom and command which it is doubtful whether the other will ever gain. Except to a man of genius, or of indomitable energy, any lengthened use of an interpreter is a certain entail, for life, of hesitating and dependent incapacity.

The habit of reading sermons is also unknown in our Canarese mission. Much may be said in favour of a beginner, before he has sufficiently mastered the language to speak extemporaneously, composing and then reading a discourse. By this means he may bring the truth before a congregation, when otherwise he must have been silent. On the other hand, every one knows that even in an audience accustomed all their days to

hear sermons read, only the thinking portion can ordinarily keep up their attention throughout, unless the reader has the attractions of a pleasing or forceful delivery. But none of us would ever think of expecting that a congregation of persons not accustomed either to read themselves, or to hear discourses read, should give sustained attention to a lecture composed by a German, or a Frenchman, in stiff, ungainly English, and read with the hesitancy of inexperience, and the indistinctness of a strong foreign accent. Such an audience could neither understand nor remember such a diatribe. Yet such, for the most part, are the congregations the missionary has to address in India; and such, at the outset, his condition to interest them. Again: every time the preacher trusts to his manuscript, he increases within himself a dread of extemporaneous effort; and, from this circumstance, many men, of passable talents, have spent more than half their lifetime, and wasted all their energy, before they dare venture to go out among the people, and, wherever they found them, call them, like heralds of God, to repentance. It is hard to conceive a position more distressing than that of a good man living amid a swarming population of heathen, and wishful to bring them to God, who yet, by a vicious training, has rendered himself incompetent to preach to any of them, but the paltry modicum that may be minded, at a stated time, to come within the walls of a place of worship. To any Hindu audience, except such as long usage may have trained, ten minutes of animated extemporaneous address would convey more knowledge, and make upon them a deeper impression. than a read discourse half an hour long. It should

also be especially remembered, that the missionary who speaks extemporaneously for ten minutes this week, has overcome a difficulty and acquired a power, that will fit him to speak, with equal ease, for fifteen next week; and a few such efforts, made after careful preparation, will introduce him to the delightful liberty of addressing the people at will, on any topic present to his mind. A young missionary, by a few well-studied and bold attempts at the first, will escape many a day of vexatious inaction. Without an early and a resolute beginning, he need not hope for first-rate success.

Every missionary ought at the very outset to determine that, by the help of God, he will preach to the people in their own tongue as well as if he were a native. To fix an aim lower than this, is suicidal to his own respectability and influence. The attainment of it is not hopeless, if he give his life to his work, and grudge no time nor pains to complete his preparation for its calls. To preach like a native, four things are necessary,—a perfect knowledge of the grammatical and idiomatic structure of the language, a *copia verborum*, a power to write and speak fluently, and a correct pronunciation.

A perfect acquaintance with the GRAMMAR of the Canarese is not to be obtained without close study; but will infallibly reward any one who takes that pains. The orthography is simple, the etymology compact and easily mastered; but there is a novelty in the syntax, and a complexity in the prosody, which render patient application indispensable to that complete mastery of them, without which, elegance of style is an impossibility. In the first stages of this department of study,

the assistance of an European is most desirable, and, without that, the student must rely chiefly on himself; for, in the niceties of grammar, he will receive little aid from native moonshis. The IDIOMS can become familiar only by extensive reading, and extensive conversation.

Respecting a COPIA VERBORUM, it is most necessary to avoid the impression, that if a man has only acquired a great stock of words, he is therefore furnished. A *copia verborum* is not merely a crowd of words, but a number of words in use among every class of the people, adequate to intercourse with that class; and a number of words on every subject, adequate to the discussion of that subject. In copious languages, like those of South India, it requires an extended vocabulary to reach this standard; but, generally speaking, the number of primitive words in a language is not near so great as people, in their dread of study, suppose; and when once master of the root, you easily acquire the derivatives. A person with five thousand roots, gained from various sources, is not despicably furnished: and who would be frightened at the prospect of learning that number of words? After the first five thousand, the rest come as of themselves. From Mr. Pope I adopted a plan that proved of incalculable service: every new word that occurred in reading was written down, with its derivation and chief meanings; then, each evening, all acquired during the day were transferred to an alphabetical vocabulary. Thus, at the cost, it is true, of some patience, every word once sighted was permanently housed in the mind. The natives say, that to read a word once, is worth hearing it three times, and to write

it once, worth reading it seven times; and no one can doubt but that their opinion has some foundation in fact. But the reason of this is not, as it seems to me, correctly stated either by them, or by Cobbett and other English writers, to rest in the fact, that the eye is a better remembrancer than the ear, and the hand than the eye. Eye, ear, and hand, are all equally innocent of efforts of memory. The process by which the mind is detained for the greatest length of time on a new word when presented to it, is the process that will most serve to fix it in the memory; and the more frequently the new word is recalled within a short period of its first appearance, the more certain does its ultimate retention become. A boy who has seen Sully's name in a short account of St. Bartholomew's massacre, may, and most likely will, forget it; but if he read the history of France, he never can; not because he employs a different remembrancer, for it is the eye in both instances; but because in the one case the new name was just looked at, and passed instantly, while, in the other, it was kept before the mind for a considerable time, and recalled again and again. After the failure of my sight, which rendered reading and writing equally impossible, it proved that by getting a moonshi to read, pronouncing every new word after him, mentally repeating it several times, then, after a short interval, recalling it, and again repeating, all mnemonic purposes were as well secured as by writing. It is very doubtful, however, whether this would have been the case at an earlier stage of acquaintance with the language. Fables and stories, as replete with the language of every-day life; *purânas* and poems, as exhibiting the

higher styles of diction; and the Scriptures, as the grand repository of theological terms; must be the sources whence the missionary will gather into his treasury things new and old. Except the Bible, no composition but what has come from a native author, ought to be looked at until the student, by much writing, and much speaking, has, to some extent, acquired a style of his own. But did a man read every book in the language, that alone would not replenish him for all the intercourse necessary to a successful mission. Without conversation on all subjects, with all grades of people, daily prosecuted, and studiously varied, his "cistern" may be full, but he will lack "the wheel," whereby alone its waters can be dispensed over the land. My study door, which looked into the verandah, was always open, and whoever came was welcome. They were encouraged to talk on whatever subject happened to be uppermost in their minds, and thus led to exhibit their modes of thinking, their village and household usages, and their views on all sorts of subjects, as also their familiar idioms, and the peculiar accents of different localities. Frequently a dozen strangers, or more, would be thus present at a time; and, on some occasions, it was easy to raise a discussion between parties belonging to different sects, by which means were obtained at the same time a valuable lesson in the language, a view of their exact shades of religious opinion, and an exercise in their method of controversy. Their conversational style ranges, according to the grades of society, from the vulgar through the passable, the respectable, and the elegant, up to the ornate. The difference does not lie wholly in gradations of propriety, but in a

free use, among the lower orders, of words belonging to the old Canarese, which, like our Saxon, forms the basis of the modern dialect; while the educated classes introduce a profusion of terms borrowed from the Sanscrit. To express the idea of falsehood, the Bramhan uses the word *abudha;* the tradesman, *surlu;* the low ryot, *sarté;* and in numbers of equally familiar words the same diversity is observable. Feeling that an intimacy with the dialect of the ryots was essential to that familiar intercourse which is the surest way to confidence, I determined on acquiring it; and, among other means, requested my moonshi to converse in it for an hour each day. To this he stoutly demurred, saying that it was an indignity to a learned Bramhan, to be asked to speak the vulgar and broken Canarese of the ryot; but, on being threatened with having a ryot moonshi placed by his side, he first laughed heartily at the idea of a ryot moonshi, and then said he always thought the purpose of education was to gain polish, not vulgarity; but that if I were not content with a Bramhan's education, without that of a ryot in addition, why then he could become a ryot, or anything else I pleased. After a while, he caught the spirit of my design, and, with consummate tact, threw himself into the character of a ryot, personating, in turn, every class of villager, and exhausting the whole round of rural incident. The advantages of this exercise soon became apparent in conversing with the ryots.

To acquire the POWER OF FLUENT WRITING AND SPEAKING, it is imperative that the missionary should make a commencement in both as soon as he can put three words together. Cases have been lamentably

frequent in which, after years of study, the writing is uncouth, and the conversation insufferably foreign. Indeed, I have known those who would not converse till they could do it correctly; and the consequence was, they never did so at all. It is absurd to attribute this to the impossibility of mastering the language; no such impossibility exists: persons not remarkable either for native genius or academical aids, are to be found in India, who, by sheer dint of hard work and common-sense plans, have gained a perfect command of the most difficult languages. It is dangerous to begin composition, in a new language, by translating from a language previously known. It may do well enough to teach the art of "making Latin;" but it is not the way to gain the free, natural, and vigorous style, which a man ought to possess in a language he must use every day, and for the most important purposes. On that method, every word you write, instead of being the expression of one of your own thoughts, is only the equivalent of another foreign word; and each repetition of this process, surely, and most injuriously, induces a habit of interposing a second language between your mind and the words in which it is seeking to express itself. Attempts at communicating your sentiments through a certain medium, though at first completely unsuccessful, give the mind a tendency to act through that medium, and habit soon strengthens this tendency into a power, which will command its appropriate facilities, No man will form a correct, much less an elegant, style, without writing; but he will reap tenfold the advantage from putting down sentences originated in his own mind, and such as his stock of words enables him to construct,

that would accrue from an equal effort of his wits, and a greater outlay of his time, made to render into Canarese a sentence previously cast in a mould utterly dissimilar. If he fail in attempting to express any fact or sentiment, he has two methods of procedure: the one, to avail himself of the help of a lexicon; the other, and by far the better, to leave his sentence unfinished, keep the fragment in his mind, and be on the constant watch for the word or phrase he wants; a few days, at most, will bring it: once gained in that way, it will never be lost again; and, in the search for it, he will have found many others. Conversation alone must not be trusted to as the means of learning to speak with facility: nothing can be worse for a missionary, than to imagine that all is right because he can converse fluently with the people in the bazaar, without being laughed at. Laugh at him they will not, even though in every sentence he perpetrate outlandish idioms, barbarous grammar, and ridiculous pronunciation; but in that case he cannot do much good; for the uneducated have but a misty view of his meaning, and the educated regard his efforts with contempt. Correct structure of sentences is not more necessary to the refinement that will delight the learned, than to the lucidness that will be intelligible to the vulgar. On the other hand, if a man defer his attempts to converse till he has formed his style by composition, he must either be of a most happy genius, or his powers of conversation will be always feeble. The two exercises must go together. As soon as a man can say, "How do you do?" let him begin; and then, through all the mortifications of false accent, false grammar, false idiom, false pronuncia-

tion, misplacements, hesitations, repetitions, blunderings, failures, absurdities, and impossibilities, let him flounder on, laugh at his own mistakes, try to do better, fail, laugh again, and combat the embarrassment till he surmount it. It is essential to have a moonshi who does not know a word of English. Nor let this frighten the student: during the first month his temper and perseverance will be well tried; his hope will often faint away; but at the end of that time it will begin to revive, and never droop again. He need not fear being laughed at: the Hindus are too polite. Sometimes, when striving in vain to make myself understood, I have said, "How is it you do not laugh at me?" "Laugh at you!" they would reply: "you are a foreigner, and have only been a short time in our country; the wonder is to hear you speak our language at all; it would be rude to laugh at you; but if one of our own people make a blunder, he deserves to be laughed at." On one occasion, just after I had begun to attempt conversing in public, they charged us with being murderers, because we used animal food. In reply to this, I told them, that if to take away animal life were murder, that crime was chargeable upon them all; for in walking along the roads they frequently trod insects to death; and then, forming my hand into the kind of spoon-shape in which they use it to drink with, I added: "In this much of your stagnant tank-water you have often a great many thousand live deer,"—intending to say, "living things;" but, by one of those lapses which will happen to a beginner, using the word *jinkigurlu* instead of *jentugurlu*. Supremely ridiculous

as this blunder was, they did not even smile, but politely corrected me.

It is to be deeply regretted that in regard to PRONUNCIATION, some missionaries fix their utmost attainment at the point of intelligibility. No one needs to be told, that the pronunciation of a foreigner may be intelligible, and yet very painful; and it is most unaccountable that any man who has even once in his life had his ears rasped by rough foreign accents, and witnessed the force of sensible remarks, that were perfectly understood, nullified by the amusement or impatience excited by bad pronunciation, can soberly *make up his mind* to talk, and above all to preach, to a people in a style of pronunciation differing from their own. Amongst those who are speaking their mother tongue, you can scarcely have a more ready passport to a man's attention, than an elegant way of enunciating words which he is accustomed to have hurled upon his ear in all the disarray of carelessness, ignorance, or bad taste. This accomplishment has a still more powerful charm in a foreigner. When a man whose complexion marks him as born to the tongues of Africa or India, addresses us in our own with a natural accent and correct idiom, who does not feel a lively gratification, and lend a willing ear? The people of India are most susceptible of this impression: among them the grace of correct pronunciation is so exclusively characteristic of the Bramhans, that it is not designated by any other term than "a Bramhan's mouth." A missionary will find "a Bramhan's mouth" to be on all occasions a guarantee of respect, and over a crowd it will give him

commanding influence. It is amusing to hear the tones of deep respect in which the less educated will say, *Bramhanara bâyi buntu!* "He has a Bramhan's mouth!" Careful reading after a native, making him pronounce difficult words several times over, and following him: committing to memory, and daily repeating verses which contain the most difficult sounds: in construing, always to read aloud; and, above all, daily conversation with persons of different class; will, in time, secure to any man of fair abilities a most respectable pronunciation; and, if persevered in, will, after a few years, make him an admiration even to the natives themselves. I have been present when a missionary, in order to silence an impudent Bramhan, quoted and demanded an interpretation of some very difficult verses, composed expressly to group together all the hardest sounds in the alphabet; and as he rolled out those words of "learned length and thundering sound," I heard some of the respectable men present saying to one another, in an under tone, with evident delight, *Bâyi kairliri! bâyi kairliri!* "Hearken to his mouth! hearken to his mouth!"

At present the student of the Indian languages has not to contend with the same difficulties as the first missionaries, but has every facility furnished to his hand; and no man, except those of the slowest talents, will study in the way just indicated, for a twelvemonth, without being able to preach. He is then in the fair way for gaining the standard of equality with a native; and he will gain it if he only refuse to let people persuade him that it is an impossibility. Impossibility! let every young missionary strike that word out of his vo-

cabulary; there should be no impossibilities to a young missionary: in this case there is no impossibility; difficulty is admitted, considerable difficulty; but no man, with the soul of a missionary, wishes to do only work that may be done by a drone. If one studies languidly, or confines himself either to books or conversation, he creates impossibilities: but if he works hard; if he divides his time between reading and conversing; and above all, if he lives, not among the English, but among the Hindus, he will certainly preach with ease by the end of the year; some will do so in six months, and the very slowest in eighteen.*

To a student fresh knowledge is always sweet: to a linguist a new word is always musical; for it unites some thought of his to the mind of families of men from whom it had been previously cut off: to any man, in any pursuit, progress is buoyant, and acquisition grateful: but to a missionary, as he consciously surmounts the difficulties of a heathen tongue, all the pleasures of gain, of improvement, and of learning, are fused into one feeling of ardent happiness. His acquirements are not hailed by the noisy admiration of the crowd, nor by the stately approval of academic tribunals; but they are hailed by the warm voice of the angel who hath the everlasting gospel to preach. In gaining every additional word, or phrase, or idiom, he grows richer; and seems to draw nigher to the ascending Redeemer, that he may hear again his last

* I am glad to refer to the remarkably sensible work of the Rev. W. Buyers,—"Letters on India,"—in confirmation of the above views on the practicability of acquiring a perfect knowledge of the Indian languages.

command, that command which is at once the missionary's warrant, and the world's hope. In conquering every difficulty, he uncoils golden wires; and, in securing each new word, sets another string necessary to complete the tones of the harp on which, before the heathen, he will celebrate Him who loved him, and washed him from his sins in His own blood. In this study the missionary has, also, a sense of right to seek special help from God. Most solemnly do I believe that no man, learning a language for the sake of preaching in it the gospel of salvation, will pray in vain for wisdom and aptitude more than are at his command for any common-place exertion.

It was on the morning of Sunday, October 13th, 1839, that I first witnessed a Canarese service in my own circuit. Before six o'clock I accompanied Mr. Jenkins and Mr. Franklin into the town. The people were stirring about, shopmen opening their shops, merchants preparing for the market, women going out of the gates to draw water, or sweeping and marking with white stripes the entrance of their houses, children sitting in the doors, and the devout either carrying their offerings to Goobbee Appa, or waiting for the appearance of Garurda to perform the accustomed worship. They knew not that it was a Sabbath, nor what a Sabbath meant. On reaching our school-room, which, according to usage, was open in the front, we found a man sleeping on the earthern floor; but he immediately arose, wrapped up his bed,—only a piece of cloth,—and put it under his arm. The service began by singing a Canarese hymn, during which several persons entered, and some stood outside. Then prayer was offered up;

and though I could not follow the words, it may be easily supposed that to kneel there, in the very midst of idolatries, and surrounded by the people to whom I had been sent, would call forth, with uncommon strength, one's "heart's desire and prayer to God, that they might be saved." Repeated practice in reading one portion of Scripture had made me so familiar with it, that Mr. Jenkins thought I might venture to read it in this quiet service; and in that humble way I thankfully made a commencement of my public duties. Mr. Franklin then preached a sermon, of which only isolated words were intelligible to me. And oh how enviable did it seem, to be able with such freedom to tell these poor idolaters of the Saviour's love!

The same morning, at half-past ten o'clock, we proceeded to a little building on our own ground, which we dignified with the name of chapel. It was of mud, and washed beautifully white: a small erection of the same material, and with the same covering, served for a pulpit. Seats there were none; the people, according to their custom, using the floor. The roof was of tiles, supported by a frame-work resting on cross-beams of cocoa-nut trees. It was a lowly sanctuary; and close by were costly buildings to the honour of imaginary and abominable deities; but it was intensely delightful there, where, a short time before, altar or servant He had none, to worship, even with a few, the only God. Few joined in his praise, few responded to the prayer; but the soul felt that all nature was in harmony with its adorations, and setting to its seal that our God is true. And yet one in such circumstances could hardly help finding fault with the lessons of astronomy, which

prevented him from enjoying the delightful illusion that he was worshipping simultaneously with the millions of Christendom. Humble as was the temple, few as were the congregation, I could not but feel, as Mr. Jenkins proceeded with the service, that his work had a dignity and a joy above any duties lying within "a line of things made ready to our hand."

About four o'clock we sallied out again: the market was proceeding busily; one street especially was thronged with dealers in grain, fruit, betel-nuts, coffee, and ornaments. Here we took our stand. A portion of Scripture was first read, during which a number sufficient to form a considerable audience, leaving their various occupations, came and stood close around. They listened throughout the discourse with still attention; but at the close a few observations were made. The service concluded with solemn prayer. Let any one who loves God just bring these circumstances before his view. It is the Sabbath; the peace which on that day a Christian's soul radiates on all nature, is beaming on field and sky; but the hurry of a market agitates the town; there, in the midst of barter and noise, the preacher takes his stand; the book of grace is opened; God's holy word sounds amongst the hum of unchristian voices; then the way of salvation is pointed out to those who are indeed afar off; they hearken mutely; the sermon is ended; and there, under that sky from which the countenance of God is shining, and surrounded by men who never raised their hearts so high, he lifts up his hands in prayer to the unseen, all-present Father; the tones of supplication, of hope, and faith, the holy promise, the mention of the "blood

of sprinkling," and the name of Jesus Christ,—all ascend on the sabbath air, mingled with the murmurs of adjacent traffic. It was a scene to melt any Christian heart. Devotion, in her love for the Lord's day, and Zeal, in her love for souls, both wept over the congregation; but Faith bent over the preacher with an air of radiant joy, and whispered, "The sons of these men will keep another kind of sabbath." In the evening, few though we were, we held a service at the mission-house in our own language. Then was the promise welcome, "Where two or three are gathered together in my name, there am I in the midst." This was the usual routine of our sabbath duties: at six o'clock in the school-room, at half-past ten in the chapel, at four in the market, and in the evening the English service at home.

Besides the labours of the Sunday, we gave to the town of Goobbee a service every Wednesday and Saturday morning, and one every Friday evening. The morning services were frequently devoted to the outcastes. Excluded as they are from any education, or any share in the religious attentions of the Bramhans, it was to them a matter of surprise that they should be sought out in their own polluted quarter, and taught religion at their own door. The transmission, through many generations, of unmitigated ignorance, combined with oppression, outlawry, and every form of debasement, has left the mind of this hapless people in lamentable imbecility, and their morals in frightful disorder. But even in them the human soul asserts itself inextinguishable: it is there still; there, with its awe of an invisible world, and its thoughts of another life.

Untaught in the system of Brumha, Budhu, or Mohammed, it collects from the rites of those around a misty superstition of its own, and pays timid adoration to clay images of sanguinary goddesses. With these poor creatures it is necessary to abound in homely illustration, and to define every principle with line upon line; otherwise the terms used to convey religious truth will either give them no idea at all, or one utterly foreign to what was intended. They usually heard us with respectful attention, and frequently we had the painful duty of reproving them for calling us *Dayvaru*, "God."

Another favourite preaching-place was the door of the great temple. We always went at the time of either the morning or the evening sacrifice, and, though denied admittance within the door, took our stand close outside. The congregations here were of a kind to awaken pensive interest; the missionary stood close by the door, and, while reading the Bible, became surrounded by a number of respectable people. On taking his text, he would see many hands holding the offerings they were bearing to the "presence;" but the missionary had arrested them on their way: others, again, had the empty vessels or cloths from which they had just presented theirs; and sometimes his eye would fall on those who were prostrate on the ground before the idol. Here, in the midst of the votaries, and within hearing of the altar, it was a stirring thing to stand and tell them all the truth, to tell them that their god was an idol, that their services were folly, that their worship was sin, and that there was "one God, and one Mediator between God and man, the man Christ Jesus." It was stirring to look upon them, stirring to see them so de-

vout to an object so unworthy; and oh, it made the very soul pant for their conversion, to witness their firm confidence, for this life and the future, in a mere stock! They often attended to a whole discourse with marked interest; but at other times made frequent endeavours to interrupt. I have even known the *poojari* (officiating priest) to leave the altar, and come to assist some of his controversial brethren. They frequently took strong ground in favour of idolatry, urging that the human mind is so unstable that it cannot be fixed on any spiritual object without some appeal to the senses; that, therefore, to worship by mere mental effort without external aid is impossible; but that by placing an image before the eye they can fix the mind on it, say "Thou art God," and by that means form a conception, and then worship. It was easy to reply to this, that however difficult to stay the thoughts on the invisible God, and to form suitable conceptions of his glorious character, by mere contemplation, it becomes infinitely more so if you make an image of a man, or a woman, or a monkey, or an ox, or a snake, and, saying, "Thou art God," endeavour to raise in your mind the desired conceptions; for by such a procedure the thoughts are wholly diverted from God, by being fixed on another and utterly dissimilar object; just as, although it is very difficult to form an adequate idea of the universe, it would be much more so were you to shape an image of a musquito, and say, "Thou art the universe." Another favourite argument of theirs was, "We have gods that we can see, we have respecting them *drushtanta* (proof to the eye); but you cannot see your God. How can one be safe, trusting in a

God of whom he has no *drushtanta?* We are far better off than you; for our gods are palpable, yours is impalpable." To this we could reply, by saying, that, if we chose, there was nothing to prevent us from making as many idols as they; but then we could not make them God; and that to call them God when they were neither almighty nor all-wise, would do us no good: but, on the contrary, would be both foolish and wicked. Then as to being better off with gods they could see than with one they could not see, let them suppose a man who took it into his head to say, "This air, this air, I cannot understand this air! If I look, I cannot see it; if I shut my hand I cannot catch it; I know nothing about its size, or shape, or colour, or where it comes from, or what it is made of.* Surely a man cannot be safe living in a thing it is impossible to see or understand. But there is the water, there is some understanding it,—you can see it, and feel it, and know all about it: I won't stay any longer in this invisible, unintelligible, mysterious air; but I will go and live in the water, which is tangible." "Now," we would ask, "what would be the result if he left the intangible air, because he fancied he had no *drushtanta* of it, and went to live in the tangible water?" "Why," they would instantly reply, laughing, "he would be drowned." The application was easy. Again, they would ask, "Is not God *servavyápi*," "all-diffused,"—that being the term they employ instead of our "omnipresent;" and to which, although aware that they give it a perverted applica-

* It must be remembered that they have no knowledge either of chemistry or pneumatics; and are not aware that such things as oxygen and nitrogen are in existence, nor that the atmosphere is blue, nor that its extent is ascertained.

tion, you cannot take an exception, because they would at once charge you with limiting the divine existence, and reducing the Deity to a finite being. You must acknowledge that he is all-diffused. "Very well," they proceed, "if all-diffused, he is in everything, and consequently in the idol." This you admit. "Then, if he be in the idol, why should we not say, (for God is there,) 'This is God,' and worship it accordingly?" Such an argument would be met thus: "Have you been to the tank this morning, to bathe?" "Yes." "Is the water low?" "Very low; we had to walk ever so far over the mud before we could get to it." "But why should you be at the trouble of walking over the mud?" "Why? because we could not otherwise reach the water." "Oh that is a mistake: is not the water all-diffused through the mud?" "Yes, to be sure; or else it would be hard and dry." "Very well; when you get to the mud, why should you not say, 'There is no use in going further, the water is all-diffused through the mud: I will therefore say to the mud, (for water is here,) *Thou art water*, and thus save myself the trouble of going farther, and bathe in the mud?'"

They enter into such discussions with exceeding zest; and when the disputant is so unfortunate as to be overtaken by a *reductio ad absurdum*, all the crowd, though supporting his opinions, join in a laugh at his discomfiture. They generally argue with perfect good humour; and if such were the missionary's object, he could at any time raise a hearty laugh at the expense of the gods. It is only necessary to satirize their impotency, their uselessness, their fabulous histories, or

their crimes, to excite a degree of merriment which clearly shows that although the power of custom binds these dark people to the altars, yet the gods have no deep hold on their reverence. Sometimes, however, when any particular god is assailed, some zealous votary will become his champion, and boldly defend him through every passage of a flagitious history. The grounds usually taken on such occasions are, that what is sin in a man, is not sin in a god; that a god can do what he pleases; that some of the crimes were committed on a scale so grand as to be in themselves proofs of divine power; and some will even contend, that, in the gods, the most flagrant immoralities are not only virtuous, but profitable. Their mode of putting this is well exemplified in the following passage from *Mora Bhatta*, and found in his "Verification of the Hindu Religion," published with Dr. Wilson's invaluable "Exposure:"—"'Krishna's committing theft with the cowherds, and playing the adulterer with their wives; Shiva's spreading death and destruction by his curses, and behaving indecently with Párwatì; Bramhà's looking on his own daughter with the eye of a paramour; Rama's crying out, '*Sita sita!*' and embracing the trees in a frenzy . . . . . such abominable transactions as these, too bad to be even mentioned,—are these,' you will say, 'what you adduce, and place on a level with the good acts of Christ? What merit will accrue to you from listening to the tale that narrates them? And as for purity of heart, not the least of it can be obtained by means of them. As by listening to love-songs, lust is inflamed; and by hearing of the feats of Sindia and Holkar, the spirit is stirred; so, by hearing

of the deeds of the gods formerly referred to, men will only be prompted to wickedness.' Regarding this objection, we maintain, agreeably to the word of God, that all these deeds are so many virtuous actions in the gods that performed them. We maintain, further, that, by hearing and speaking of them, the ignorance of the imprisoned spirit, and its consequent subjection to passion, are removed; and that thus they have as much power as image-worship itself, to create in the soul pure and holy dispositions." To see a man, with animated and intelligent countenance, look you right in the eye, and avow these monstrous opinions as his solemn creed,—and to hear a whole assembly concur in the declaration,—would make even an infidel thank God for Christianity!

The service on Friday evening was generally of a conversational character. Selecting a shop that seemed to promise a good auditory, we would enter, and, making our salaam, familiarly take our seat on the floor beside the shopkeeper and his customers. They received us courteously, and even when busy would desist; not, however, without an occasional remonstrance on the inconvenience of being interrupted. But this was generally waived on our saying kindly, that we should be glad to see them whenever they would favour us with a visit; and that, besides, religion was of so much greater importance than business, that it was quite right the latter should be set aside now and then, in order to give the other due attention. If no such remonstrance were made, we would at first spend a little time in general conversation; but very soon turn to religion. Our most ordinary plan of introducing religious topics

with a stranger was, to ask him, who was his god. To this I have seen very respectable men reply, by patting their person, and saying, *Idu nanagay dayvaru whurté*, "This is my god, my belly." Others would lift up their hand with some rupees, and, shaking it till the money chinked, would say, *Idu nanagay dayvaru rupáyi*, "This is my god, my rupees." Others, again, would look you in the face, and, with an obeisance in which respect rose to veneration, would say, *Swâmi, neewu nanagay dayvaru*, "*Swami*, (God,) you are my God." It may be easily conceived how we received such declarations; but they would coolly defend themselves in this strain; "What is the office of God? To rule all things: and what does not the belly rule? What is the office of God? To rule all things: and does not money govern the world? What is the office of God? To govern and protect: and do not you (meaning the English) "govern us all, and protect us all? Therefore you are our God." The grand heresy of man is a vicegerent godship. This is the first and most prolific of all idolatries; and the state of mind indicated in the remarks just quoted is only its legitimate issue. When fairly left to work its own results, it brings the mind to regard any person, or indeed anything, from whom benefit is derived, or to whom deference is due, as so far God: the monarch to his subjects,—as we have gracefully insinuated in the Sapphics of Horace, and broadly stated in the pastorals of Virgil,—the husband to his wife, the father to his child, the priest to his disciple, all are, by virtue of their office, gods vicegerent. How completely this is the case with the husband, the following extract will sufficiently show:—"Let the wife who wishes to

perform sacred ablution, wash the feet of her lord, and drink the water; for a husband is to a wife greater than Shankara or Vishtnu. The husband is her god, and *guru*, and religion, and its services; wherefore, abandoning everything else, she ought chiefly to worship her husband."* The devotion is not less prostrate in the case of a disciple toward his priest. They tell a tale illustrative of the principle, that even a silly or worthless *guru* is, by virtue of his order, all in all to his disciple. During the rainy season, a *guru* and his disciple, on a journey, came to a river so swollen that there was no possibility of crossing. The disciple, however, strong in faith, cast himself into the water, and crying out, *Nanna guruvina padavay gutti*, "My priest's feet are salvation," he was borne safely to the other side. Seeing this, the *guru* became elated with a like faith in his own powers, and casting himself into the river, he cried lustily, *Nanna padavay gutti*, "My feet are salvation;" but, to the consternation of the devoted follower who had just made such marvellous proof of his virtue, he was borne down by the stream, and lost. They add, he ought to have used the same invocation as his disciple, "My priest's feet are salvation;" for while he was as God to his disciple, his priest was as God to him. Is not this identical with a dogma familiar in Europe, that a wicked priest can absolve a disciple, but cannot absolve himself?

In our conversation we freely discussed any topic of religion or morality which might arise. Nor did I deem it right to refuse to enter, occasionally, on general subjects; for to please the people by attending to their

* *Skanda Purana*, quoted by Dr. Wilson.

inquiries with regard to England, or public events, or points of science, conciliated their kindly regards. The vulgar talk among writers on India about the people being incapable of gratitude, is sheer nonsense: even a little polite deference to their wishes will soon show that they are not inaccessible to that gentle virtue. When the conversations became controversial, they were generally conducted on their part with perfect good humour; but we often came in contact with one Bramhan of intense bigotry and explosive temper, with whom it was impossible to discuss without bringing on yourself cataracts of insolence. This, though no way grateful to one's feelings, was not at all dangerous to our arguments; for the Hindus appear generally to hold, that when a disputant becomes angry, he casts the cause into the hand of his opponent, and both loses and deserves to lose. They take lively pleasure in a discussion conducted with skill and good temper.

The logical acumen of the Bramhans has been much extolled. No doubt they have at least an average amount of natural reasoning power, and by force of volubility, readiness at illustration, mastery of quibbles, and unscrupulousness, they are very unmanageable, if not very formidable, opponents. But of any fair logic they are perfectly innocent. As all men who reason at all must do, they frequently throw out the rough form of one kind of syllogism or another; but it is done without any knowledge of the general laws which would enable them to refer it to its class, or to guard it against flaws; and in five cases out of ten, a conclusion no way consequent on the premises is announced with a profound complacency, which a very little logic

would disturb. They have no notion of the principles of deduction, nor of any compact categorical formula, and as much of analyzing an intricate argument as a Brazilian-mine slave has of analyzing diamonds. They never dream of reasoning fairly. A sophism among Bramhans is like theft among rogues, a crime not as perpetrated, but as detected. An illustration will always pass for an argument; and your only resort is to give it some turn in your own favour. They raise subtle questions, seize readily on a weak point, illustrate profusely, mystify admirably, and dogmatize to perfection. But there is far more rhetoric than logic. The figures of the latter have no chance beside those of her more showy sister; Barbara is tame in the presence of Hyperbole; and Camestres insipid in comparison with Prosopopœia. It must be acknowledged, however, that they readily catch the points of a case, and, when an argument is clearly put, do not manifest the confidence habitual to those who are incapable of being placed in a difficulty, because incapable of perceiving sequences; but, on the contrary, they show that confusion and desire to shift the ground, which are the proofs of a conscious dilemma. When you have any important point to carry, the safest way of reasoning with them is to begin by getting their adherence to general principles, from which your conclusion may be clearly deduced. In most cases this may be done; for general truths commend themselves to all. Few dialectic exhibitions are more amusing than the discomfiture of a pert, high-headed Bramhan, who has confidently entangled himself in mesh after mesh of this Socratic net, when he is

suddenly arrested and dragged to a conclusion the most repugnant to his feelings.

We lived among the people on terms of the most perfect familiarity, making it an object to invite their approaches. Many of them were in the habit of visiting us, which we were careful to encourage, as it gave us the opportunity both of conciliating their good feeling, and of conversing at large on religious subjects. These visits also enabled us to judge of the state of feeling in the town with regard to our proceedings. Sometimes we had evidence of bitter opposition; but it was manifest that many were no longer at ease in idolatry, and that the public sentiment, with respect to it, was passing from profound veneration to dubious regard. We found, also, that as the heathen cannot conceive of a person devoting himself to live in a strange country merely from benevolence towards its inhabitants, they at first regarded us as servants of the government, enjoying a handsome stipend. We were most careful to convince them that we stood wholly disconnected from the Company, without their instructions, their pay, their sympathy, or other benefit from them, except that they would protect us as they would protect any parties residing in their dominions. Our vouchers were at hand,—the absence of retinue, of power, of communication with the government; and all the intelligent classes soon became satisfied that we were simply what we professed ourselves.

One day shortly after my arrival at Goobbee, and when Mr. Jenkins was from home, an intelligent young Bramhan came into the veranda, and waited till my moonshi had taken leave. He told me that he lived at

Cudaba, a few miles distant, and had some time before made several visits to the mission-house, where Mrs. Jenkins had kindly given him lessons in English. No sooner were we alone than he began to converse on religious subjects; and, after glancing round timidly, as if to be assured that no one overheard him, he said he wanted to know if I could tell him how to obtain forgiveness of sins, saying, he was convinced that idols were no gods, and had a strong desire to walk in our way. He then inquired, with much solicitude, whether, if he joined our caste, he must wear European costume and eat meat. I put into his hands the fourteenth chapter of Romans, and, as well as I could (for at the time my acquaintance with the language was very slight), explained the real demands of Christianity; after which he declared that he was most anxious to serve God in the Christian way, but added, that if he did so, his friends would beat him, cast him out, and leave him destitute of subsistence, and asked whether we would not, in that case, give him "rice and cloth." I declined to make any promise to that effect, assuring him that he must be willing to suffer persecution for the Lord's sake, and that if he exposed himself to want, trusting in God, no evil would befall him. The next morning, about sunrise, he came again, and declared, with increased earnestness, that he was in deep sorrow for his sins, and thirsting for forgiveness; that he had utterly abandoned idols; that he now prayed to the one God through Christ; and, moreover, that he was perfectly willing to lose father, mother, brothers, and sisters, and to endure any amount of persecution, if he might only rely on having rice and cloth. This was

the point of trial. I knew well, that to become a Christian was, to him, certain destitution, and was fully determined that, in such a case, he should not want while rice and cloth were within our reach; but it was most desirable to prove to the utmost his disinterestedness, and therefore I avoided making any promise, simply assuring him that, if he cast himself on the Lord, he would protect him, and that God's people would gladly help. To this he replied, that it was easy for me, who had a good house over my head, with food, clothes, and friends, to say this; but what had he to fly to? This, and the importunity which followed it, were very moving; but I resolved not to make any promise which might prove to him a temptation to decide in favour of Christianity from worldly hopes, or to us, in case he joined us, to suspect his sincerity; or which might lead others to believe that the profession of Christianity was the way to a temporal provision. After some time, he repeated his visit, avowing the same feelings; but after that we could hear no more of him, and were led to fear that he had been suspected by his family, and removed to a relative residing at a very great distance, and high in office under government.

One morning while Mr. Jenkins was preaching in the shop of a very respectable money-changer, I observed that the owner of the shop evinced symptoms of strong internal emotion. We had not been at home more than half an hour, when he came to the mission-house, frankly acknowledging that he had been following false gods, that our word was true, and that he felt he ought to walk in our way. His whole air gave the strongest indications of a wounded conscience. But, though

really earnest to enter on the way which he believed would lead to peace, he felt the power of those tender entanglements with which every man is surrounded by the family system of India. He said, that as to the mere matter of caste, he could make up his mind to part with that; but that he lived in the house of his eldest brother, the *yejamâna* (highest hereditary official) of the town; that all his capital was in his brother's hand, every *anna* of which would be retained if he became a Christian; that his wife and children were under his brother's roof, and would be denied him if he forsook the family faith. These considerations held him irresolute. He trembled at the spiritual consequences of remaining a heathen; and yet shrank from the temporal consequences of becoming a Christian. He more than once repeated his visit, evidently under deep anxiety of mind, and apparently meditating some plan of escape; but still he came to no decision. After the lapse of several weeks, I met him alone coming out of the gate of the town, and asked him what he intended to do. With an air of melancholy and shame, he replied, "I have made up my mind to walk a while longer in the bad way."

Though the people of Goobbee treated us with uniform respect, they did not regard our operations without some alarm. Some of the elder and more influential men frequently besought me to desist from preaching, and leave them to follow, undisturbed, the way of their fathers. Toward the latter part of my stay, these requests increased in frequency and earnestness, and were sometimes backed by appeals to my love of peace. The *yejamâna*, and a younger brother of his, pressed this

point, on several occasions, with an anxious importunity that convinced me they were not wholly ignorant of their brother's leaning toward Christianity. They would put the matter thus: "Does not your religion teach you to promote peace?" "Certainly." "Well, then, if you are faithful to your own religion, you will cease to preach; for various opinions are springing up, from which serious misunderstandings follow; and if you persist, it is hard to know what amount of division may be the result. You,—if you continue in a course that will breed contention, when your religion teaches you to be a peacemaker,—you are not true to your own religion." They were surprised to learn that this statement was to me a strong encouragement to persevere.

On all those mornings of the week which were not devoted to Goobbee, we visited one or other of the adjacent villages; for we deemed it wrong for a missionary to allow any sun to set without having seen him preaching the gospel. We always left home in time to reach our appointed place shortly after sunrise, at which time the people are stirring, and about to proceed to their duties in the fields. Leaving our horses outside, we entered, and generally found some of the elders sitting in the gates; and there we took our stand, unless the village offered a more advantageous place, in the shape of a school, or open temple. In some villages our congregations regularly comprised a considerable portion of the males, and now and then several females would join them, though in the towns none ever ventured to do so, except very old women, or those of the lowest character. We began by reading a portion of God's word, and then preached. During the

sermon, the people would freely express their concurrence, dissent, or any other feeling which might be awakened. If remarks likely to lead to controversy were offered, we did not usually stop to answer them, judging it more desirable to give the people a statement of the truth, than to engage in a discussion which might consume all our time, and oblige us to leave without having communicated any definite view of the scope of our message. After making good our exposition of the gospel, we would freely enter into the consideration of any objections they might choose to raise. When, in the course of a sermon, we have alluded to their idols, sometimes you would see a frown on some countenances; while others would laugh; and others cry, "They are nothing!" and I remember cases in which they have said, "You need not talk to us any more about the images: we know they are of no use: we will trust them no longer." This, coming from plain ryots in secluded villages, was a welcome, not to say wonderful, sign of slow, but resistless, conviction. On the other hand, an opponent would sometimes set himself forward, and contend with a confidence bearing little proportion to his logic. Objections coming from ryots were generally of the simplest order;—they could not walk in another way than that in which their fathers walked; the ancients had been far wiser than they, and it would be folly to imagine they could improve upon their customs; they could not pray without an image,—that might do for scholars, but ignorant people must have something to look at; it was a bad thing for a man to change his religion; the gods would be incensed, and punish or kill them, if they did them

dishonour. But on no argument did the ryots more frequently insist, than on this: "The Company are far the wisest rulers we ever had in this country, and understand things well: now they support the gods by money and offerings;" (for what our authorities would call "presents," they always regard as offerings, not made to amuse the votaries, but to propitiate the deity;) "and if the gods were not powerful, would the Company do honour to them?" When we replied, that the Company supported the gods not at all because they trusted in them, but only because they wished to please the people, they would rejoin, "Then, if they know that the gods are no good, is it not sinful for them to make offerings?" This we were not prepared to deny; and sometimes they have added, with keen point, "You ought first to teach your own people not to honour false gods, and then come and teach us."

It was very common for them to deny that lying and libertinism were sins; not that they are supported in such a denial by the authority of the Shastras; but because these practices are so universally allowed, that it was strange to hear them accused as criminal. Their notions of moral guilt in general are exceedingly vague. They *feel* that sin is punishable; but it is rather a feeling than a conviction; rather a conscience independent of all teaching or reflection, than a definitive conclusion of the understanding, drawn from recognised premises. Their definite ideas of moral turpitude seldom go farther than the blame attachable to the violation of ceremonial prescriptions, or of social rights; which blame is removed by a ceremony, or a restitution, as the case may be. Hinduism has not the reve-

lation of a God who disapproves of everything impure, unjust, untrue, or unkind, because his own nature is of such goodness, that he cannot look upon such things but with disapprobation. The toils of many Hindus after pardon sufficiently show that an inward voice, which their creeds cannot translate, apprises them of an awful displeasure impending over their sins,—a displeasure of which they have sufficient apprehension to deprecate it with the most painful tortures. But all this is clouded and inexplicable feeling: they have no great principle of truth in view by which to account for it; no idea of a good Creator, to whom every act of evil must as necessarily be displeasing as deceitfulness in a child to a good father, or dishonesty in a subject to a good king. To give them this idea, to make them feel the eye of God on their hearts, was our first object in preaching. We believed that they were likely to be brought to Christ much sooner by a sense of their sins, than by a mere conviction that idols were only blocks. Nor is it so difficult to convey this idea as has been represented. It is utterly and unaccountably incorrect to say, as some very respectable men have said, that they have no conscience. A man without a conscience would be a demon: God would not suffer him to live. A nation without a conscience is a physical impossibility; society could not cohere. The Hindus have not the well-taught tender conscience of a Christian; but they have that light from God in Christ which enables them, and enables "every man that cometh into the world," in spite of the preference given by his depraved affections to evil above good, to discern in good a beauty, and in evil a stain, which makes the choice of the latter

defiling. There is quite enough of common ground between the conscience of the missionary and that of his hearers, to enable him, in every "accusing" of evil, or "excusing" of good, to awaken an echo in their breasts. Mr. Buyers, who thoroughly understands his subject, and writes with a common sense which, had it always been used in the works of missionaries on India, would have done no small service, makes the following statement with regard to a Hindu on this very point:—"His conscience accuses or excuses; and though he sometimes has recourse to the doctrines of fatalism, or even of atheism, to defend himself against imputations of personal guilt, he rarely, if ever, has a solid belief in such theories as destroy moral responsibility. He may be addressed by a preacher in nearly the same way as ungodly men amongst ourselves." One might take it for granted beforehand, that if he were to address to a heathen audience a statement of religious truth, in set order and well-translated theological terms, they would not readily sympathize with his morality, because they would not understand it. It is not fair to talk to Hindus in the Sanscrit terms which best translate your English or Greek ones; and because they do not concur in your views, deny them a conscience. Many a good man in England would hesitate to say that "furtive acquisition" was criminal, who would at once pronounce it sinful "to steal;" and many a worthy housewife would plumply deny that it was any duty of hers to "supervise the domestic economy," who would at once own that she was bound to "see to the house." Let the missionary only make himself familiar with the people's modes of thinking, and he will be fully con-

vinced that if he talk to them in theological fashion, they will not comprehend him; but as fully convinced that it is quite possible to convey to their minds every Christian truth. The most glorious themes in the gospel are expressed by words for which their language has no proper equivalent, though furnished with etymological synonymes. Their languages (and it is a sad thing to say) have no word that conveys a true notion of atonement, intercession, justification, regeneration, or resurrection. They have terms that will translate your terms; but that is not the thing. The heathen have not the ideas which these awaken in our minds; and consequently a mere word, no matter how correctly it translates our word, cannot give them our ideas. But this does not close the medium of communication. A native will not understand what you mean by "justification;" but will fully understand what you mean by a man having all his sins forgiven. He will be confounded by the term "regeneration," but will readily comprehend when you speak of making a bad man good. Thus, by speaking of the thing, rather than harping on the term, the missionary may easily give the people his own ideas, and place himself in a position to use them in an appeal to the conscience.

On the question of moral guilt, I have seen a village audience deeply affected. They have very strong views of the filial duties. The missionary, taking advantage of this, asked them, "What would you think of a son who had a very good father, and was frequently in the habit of refusing to obey him?" They instantly replied, "He would be very wicked." "Suppose he regularly, every day, broke some commandment of his

father's?" "He ought to be turned out of doors." "But suppose he made a practice of disregarding all his father's commands, and doing the very opposite?" "Why, such a fellow would not be fit to live." The missionary then, applying the illustration, showed that God was our Father,—wiser, kinder, more worthy of obedience than any earthly father; that all kinds of sinful acts were in direct disobedience to his will; and asked, if such blame lay on a child for systematic contempt of his father's authority, what weight of blame was upon him who, for many years together, never spent a day without several times breaking the commandments of his great Father in heaven. As he proceeded in this strain, they listened with the eager attention of men drinking in a new and startling truth; and presently, some of them striking their mouths with the palm of the hand, as is their habit in astonishment or grief, cried out, *Abah! abah! yaynu marda bayku?* ("Ah! ah! what must we do?") On another occasion, such was the impression made by a similar strain of remark, that some, as they would do under any urgent need, or sudden calamity, began to "call upon the name of their gods." To a Christian minister, telling sinners of their guilt, with the intention of pointing them to the Lamb of God, it sounded harsh to hear just before him an invocation of the abominable Shiva; yet it satisfied him not only that his argument was understood, but that the people were brought to feel that their condition demanded superhuman aid.

Within sight of the mission-house, but distant above a mile, stood the village of Shingona Hully, with a temple to Runga, on a knoll a few hundred yards from

the gate. About the time of my arrival, the inhabitants of this place declared that they had abandoned idolatry and would no more honour the temple of Runga. To test their sincerity, Mr. Jenkins one morning asked them, whether we might go to the temple. "Oh, by all means!" "Might we enter?" "Yes, go where we liked." "Might we enter without taking off our shoes?" "Certainly; we don't care who goes, or how: we have given up the idol." This was strong proof that their old feelings had vanished; and, accordingly, at the temple we found no obstacle to our entrance. Shod and covered, we passed up through the outer apartment to the sanctuary, where sat the grim image of Runga, incrusted in the congealed oil and *ghee* of many anointings, with the lightless lamp before him, faded garlands hanging round his neck, loads of dust settled on his person, and part of the roof falling in directly above. No room remained for doubt. The faith which once adored Runga had changed into contempt; and we rejoiced over that forsaken idol, as an earnest of better days. On afterwards inquiring what induced them to withdraw the confidence they had so long reposed in Runga, they answered, "You" (meaning the missionaries) "told us that the god did not protect us, but that we protected the god; that if we only left him alone, we should see that he could not take care of himself; and if he could not take care of himself, how could he take care of us? Now we thought that was a *budhi mâtu*, ('a word of sense,') and so we resolved to see whether he could take care of himself or not; for we felt certain that if he could not take care of himself, it was out of the question that he could take care of us.

Accordingly, we discontinued *pooja*. We soon found he could not keep the lamp burning, nor the garlands fresh, nor the temple clean, nor do a single thing for himself. The lamp went out, the flowers withered, the temple became dirty; and then," they added, laughing, "the roof fell in just over his head, and there he sat *soommanay* ('tamely') under it; so we saw very well he could not take care of himself."

Notwithstanding all this, we had some fears that the return of their annual feast-day would revive their love for heathenish merry-makings, with a force too strong for their new convictions. The day came, and we watched the village narrowly. There was no car, no procession, no music; and, when night came, no *tomtom* was beaten, no rocket sent up, nor any other sign that it was the day of Runga. One morning, when preaching in the village, I observed that the old man who used to conduct the services of the temple was not in the congregation; and feeling, for the moment, a suspicion lest he should have returned to his former occupation, I asked, "Where is the *pujári?*" A young man instantly replied, smiling, and patting his person, "Oh he is gone to the fields with the cattle: now that the temple is given up, he must do something for his stomach." Their abandonment of idol-worship seemed complete, and not a few of them averred that they now offered prayer to the one true God; yet they evinced no disposition to embrace the profession of Christianity. This they accounted for by saying, "Were we to do so now, we should be persecuted; we should lose our lands and our village: but if we wait a while longer, all the people will be of the same mind, and then we can all

become Christians together, without the risk that would attend such a step at present." This answer I, at first, regarded simply as one of those adroit subterfuges in which a Hindu never fails; but when I heard it repeated in different neighbourhoods, and by persons between whom collusion was impossible, it satisfied me that, though they had not those poignant convictions of sin which would impel them to decision at all risks, a persuasion was growing upon their minds that the day drew nigh when our doctrines must prevail. I well remember one old man in Shingona Hully, who was very seldom in our congregations, and showed a remarkable unwillingness to hear us preach. Yet that man, with his wife and three sons, has been the first to come out, and, in the face of considerable opposition, to embrace the gospel of Christ. This took place about two years ago; and of his present character the missionaries on the spot give this account:—"Daniel, the father of the family, is really an interesting man. He is in the constant habit of collecting the people of his village, to read and to pray with them. Although he cannot himself read, he has, through his sons, obtained such a knowledge of the gospel, and of many parts of the Old Testament, as makes him an efficient man in discussion with his countrymen."

It sometimes happened, in visiting a village, that the people were either so busy or so careless, that a congregation could not be obtained. At such times we would look round for some person who happened to be so employed that he need not be interrupted by our conversation; and, attaching ourselves to him, would enter at once on religious topics. In this way we have often

spent an hour with a knot of weavers, plying their art under the open air, and on simple machines with which their European brethren would deem it almost impossible to produce any fabric; or by the wheel of the potter, who, maintaining the whirl, and dextrously shaping his wares, gave, at the same time, attention, and perhaps freqent response, to our discourse. With the shepherd watching his fold, the ryot measuring his corn, the pedagogue surrounded by his pupils, the tax-gatherer collecting his dues, the old woman spinning her cotton, the housewife grinding at her mill, we have familiarly talked about the things of God. It was pleasant work: we were constantly rejoiced with the conviction that we were doing good in the name of the Lord, and laying the foundation of an imperishable edifice. No heart need wish for a happier feeling than that of a lonely missionary, who has just been talking about Jesus to the simple people of a heathen village; and, in offering up the prayer in which no one joins, feels a divine assurance that the work he is so feebly beginning will be advanced by the power of the highest, till the whole scene around is created anew. At that moment, far above any other, his feelings approach to the rapt anticipations of Isaiah.

One morning, on entering a village a little to the west of Goobbee, we discovered a man in the act of rising from the floor of a choultry, where he had been resting for the night. We found that he had come from a long distance to the westward, and was on a pilgrimage to the temple of Venkartaramana, at Tripati. In the mean time his wife had risen from the floor, with an infant on her side. She looked weak and ill; and,

persuaded that she was not fit to undertake a journey of more than two hundred miles, I asked her if she were not unwell. The husband sulkily reminded me that I ought to speak to him, and not to his wife: for a married woman is expected not to converse with any man but her own husband; unless, indeed, he be a very near relative, and then but sparingly. Turning to him, I insisted that his wife seemed utterly unfit for the journey they had before them; but he was not in the least disposed to hear such representations. At length the poor woman, unable to restrain herself longer, exclaimed, in a piteous way, "Indeed, sir, I am very ill; this child was born only last night upon the road, and I am not fit to go on." The fellow seemed much provoked that his wife had dared to speak. I kindly urged him, as he valued her life, and that of his child, to rest for at least a day or two. But, no; he muttered, "I am going to make the sight of the great god, and the season is far advanced;" and so saying, he sullenly walked away, casting a look of angry command to his poor wife, who with slow and fainting step began to follow him, supporting her infant on her side. I thought, "And this is the pilgrimage to Tripati, from which a Christian government derives large revenues!" Thank God, that such gold no longer pollutes the treasures of Britain!

One morning, in proceeding to a pretty sequestered village, called Oodaloor, we were suprised to meet numbers of the Goobbee people returning from it. On inquiring what had taken them to Oodaloor so early, we were informed that they had spent the night there, at a feast in honour of Màriama, the goddess of disease.

Outside the gate we found large numbers of persons, who informed us that the solemnity had been one in which several individuals lately restored from dangerous illness, by the clemency of Mâriama, passed two or three times through a fire, in fulfilment of a vow to that effect made during their sufferings. Just inside the gate was placed a wooden image of the goddess, before which lay offerings of plantains and flowers, with a small censer burning. Mr. Webber, who was with me, addressed the people at length on the subject of these wretched penances. A large audience closed round him, and heard with deep attention. A gaily-dressed temple-girl, with a retinue of fantastically-painted musicians, came just by, and danced her most enticing dance, while her suite exhausted all the powers of instrumental discord; but they did not succeed either in interrupting the preacher, or distracting his congregation.

In India it is not wise to be exposed to the heat of the sun later than eight o'clock in the morning, or sooner than from half-past four to five in the afternoon. In visiting towns too distant to admit of our returning in good time, we took with us a little tent, and returned in the cool of the evening, or in some cases stayed all night, and went to another place the next day. At Biddiri, where a large market offered an advantageous opportunity of preaching, we frequently spent a day. We had a school in the town; and, on arriving, our first duty was to examine the boys in the Scriptures, and in our Catechisms. During the examination, several respectable men would come in and sit down, while a still larger number gathered round the open front of the school. Immediately on concluding with the boys, we

preached to those assembled. Outside the wall of the town was a miserable group of huts, inhabited by the out-castes. Hither we proceeded from the school; and, in perhaps two or three places, gathering a few of these degraded beings round us, would in a familiar way explain to them the salvation of the gospel. By this time our tent would be pitched, whither we gladly retired for shade and refreshment. On one occasion, while at breakfast, we heard a Bramhan outside reading, to a circle of natives, a tract he had just received. After breakfast, we found the people assembling, and arranging their wares. The most weighty commodities were grains, such as rice, *raagi*, and *gram*, *(phaseolus radiatus,)* a valuable legumen used by the English to feed their horses, but by the natives as an article of diet. These were carried to market in sacks, slung over the back of a bullock, one hanging on each side, and balancing each other. Coffee, also, was becoming an article of some traffic, and they were anxious to ascertain its use, (for they do not drink either coffee or tea,) inquiring whether we used it because it intoxicated? or was it good for the stomach? or good for the blood? or did it cool the body? or did it warm it? And they seemed puzzled to judge why we should lay out money for a beverage not distinguished by any of these properties. The other articles on sale were spices, plantains, cocoa-nuts, unripe, (for the sake of their milk, which is good only at that stage,) ripe, (for the nut as an article of food,) and dried, (for the manufacture of oil,) tobacco, onions, various fruits and vegetables, with sweetmeats, earthenware, cloths, ornaments, and idols. The stalls consisted of a piece of cloth spread on the ground,

on which the goods were displayed, the vendor sitting by. Women frequently had charge, especially of fruit-stalls, and those devoted to ornaments for the person. These latter were various,—rings, necklaces, and bracelets, with many minor decorations; but none of them appeared so much in request as a bracelet formed of a ring of coloured glass, large enough for the arm. A village-damsel, after a due length of time spent in selecting, would negotiate a tedious bargain, and then, sitting down, hold out her hand to the seller, and, with inimitable patience, submit to the torture of having the ring forced over her hand. The process took several minutes, and required no little adroitness in the lady performing it, to avoid breaking the fragile decoration. Some have a dozen or more of these glass bracelets on an arm, both above and below the elbow, coloured red, green, or yellow, according to taste; and, if possible, interspersed with a few of silver.

The commerce of a Hindu market is not so urgent as to prevent a missionary from gaining attention. The shade of some trees standing in the market-place enabled us to preach in the open air at any hour of the day. When only a small group assembled, we gave a short address; when a large congregation, we discoursed at length. The anxiety manifested for our books suggested a plan for gaining patient attention. When preaching in the busiest part of the day, I placed a pile of books on my left arm. However lengthened the discourse, this chained the auditory; for every one hoped to secure a book at the close, No sooner was the sermon concluded, than an amusing contest began, every one striving to distinguish himself by forcible

appeals, or lofty compliments. The strength of their desire for books was forcibly manifested by one circumstance. According to Hindu law, contact with a dead animal is polluting. Leather is part of a dead animal; and, consequently, unclean. It may not be touched without defilement; hence it is that none work in leather but the dregs of the out-castes; that all shoes are made with the heel down, capable of being slipped on and off without touching them with the hand; that they must be left outside a temple or a friend's door,—to carry them in, being in the one case an irreverence, in the other an insult; and that no indignity is so outrageous as to be struck with a shoe. Owing to this, when books bound in leather were first offered for distribution, many regarded it as an attempt upon their caste, and indignantly refused. It was consequently found necessary to have the greater part done up in cloth. Notwithstanding this, toward the latter part of my stay it was frequently demanded, *Charmada pustaka bayku*, "We must have a leather book." "Why a leather book?" I would reply: "is it not contrary to your caste?" *Howadaya adaray baharla huttu niluttaday*, "Yes, sir; but it stands a long time." And to obtain a book that would stand a long time, they were willing to contract a little defilement.

In the intervals of preaching, we frequently walked round the market, entering freely into conversation with groups or individuals; thus both winning their confidence, and familiarly explaining the truths they had heard us announce. When in our tent, the door was open, and a tempting pile of books lying on the table. We were seldom without a visitor; and thus,

in one way or other, almost every moment of the day was turned to account.

A few miles from Biddiri, on a commanding hill, and overlooking a rich landscape, stood Chayloor. Persons from this town asked us to establish a school there, before we had ever visited it. This was done; and shortly afterwards we left home one morning, long before daylight, and arrived before the town about sunrise. When entering the gate, we met several women carrying their water-pots, to draw water. Most probably they had never seen white men before; and either terrified, or doubtful what the apparition might signify, they drew their garments over their faces, turned round, and hurried back into the town. Some men soon made their appearance, who gave us a polite welcome, and led us to the school. In a town where a Christian had never dwelt, it was no unwelcome thing to find a number of fine boys, with a Bramhan for their master, reading our Lord's Sermon on the Mount. Our appearance soon attracted a concourse: the Bramhans, and more respectable men, came into the school-room, and sat down; the others stood in front. We examined the boys in the Scriptures, and the Conference Catechism. This excited marked interest among the bystanders. At its close, selecting from the chapter they had read the words, "Blessed are the pure in heart, for they shall see God," and referring to their constant demand to be shown our God, I insisted that to take part of a tree or stone, give it a certain shape, and call it "god," no more enabled us to see God, than to take another part of the same tree or stone, give it a different shape, and call it "soul," would enable us to see the

soul; and then described that spiritual communion with God in this life, and that vision of his glory hereafter, which alone can be rationally viewed as seeing God. This opened the way to show that persons of impure heart could have no such blessedness; that our nature was deeply tainted; that it was impossible for such a nature to maintain friendship with a Being wholly good; that we are unable to effect its renewal; and, finally, to declare, that through Christ that renewal might be obtained, the vilest mind be sanctified, and the soul, where before no goodness had existed, be replenished with every virtue. They heard these novel doctrines with profound attention, and appeared favourably impressed. When I concluded, a Bramhan said, "This is a good word; no doubt it is true; what you say about obtaining purity is good. For you, it is a good way to obtain purity through Christ; but it is not the only way; there are other ways for us. You find purity through praying to Jesus Christ; but we find purity by other means, such as *pooja*, bathing, penance, contemplation, and pilgrimage." To this we replied, "You are a man of years, and doubtless of observation. You are quite aware, that when the heart is pure, the life is pure: now, will you say whether a case ever came under your notice, in which, by any of the means you have named, a man who had long been known as a bad man was changed into a good man; say, a cheat into a man of integrity, or a liar into a man of truth, or a miser into a man of benevolence?" He stared in pure amazement; and the others stared at him, to see how he would answer so strange a question. Aware how utterly novel must be the idea of such a transformation.

I said, "Perhaps you are thinking of the *Shlôka*," (text of the Shastras,) "which declares that 'a confirmed sinner cannot be reformed, even though he were to wash in the Ganges.'" "Yes," he replied, evidently relieved; "and how could you, knowing that *Shlôka*, ask such a question?" "I do ask the question: Did you ever know a case of the kind?" "Of course I did not: how could I? It would be contrary to the scriptures." "I knew what you must say. You never knew a case in which the means you have named succeeded in purifying the life; which abundantly proves that they do not purify the heart. Now, mark what I say: I have known many cases in which, by faith in that Jesus whom I preach to you, the worst of men have been suddenly changed into the best of men." This called forth looks of surprise from all. The Bramhan observed, "You do not mean that you *knew* such cases: you heard of them." "No, no; I have known the thing to occur again and again; known the persons and their character, both before and after the change. And, what is more, I am willing to stake all my reputation among you—to stake my name for truth, and my character as a *padre*—on this, that if there is amongst you any one who in his soul is sorry for his sins, and anxious to be cleansed from them, if he will this day trust with his whole heart in Jesus, though he were the worst man in Chayloor, Jesus will this day change him into a good man!" This declaration, made with the air which sincerity always gives, evidently produced a deep impression. The Bramhans were here confronted with a power before unthought of,—a power to purify the human soul; not by occult washings, that leave all

appreciable defilement untouched; but by an actual change of corrupt into holy affections, attested by an appropriate change of life. This real, obvious, demonstrable regeneration was to them a *terra incognita;* they had no sophism prepared to meet it, no hereditary *dictum* whereby it could be touched. It was a simple fact stated on credible evidence; and they could only hear the testimony with undisguised astonishment.

Some would gravely question the discretion of thus at once unfolding to the heathen the peculiar characteristics of the gospel. They would judge it more prudent first to shake their confidence in pretended revelations, and then advance the claims of the true; to make them ashamed of the idol, before you turn their eye to the cross. There is something feasible in such a view; but perhaps only feasible. It is more easy to expel an old sentiment by the introduction of a new one, than by a simple assault. We might be wrong; but it did not strike us that the plan which would postpone the cross to the demonstration was suggested either by wisdom or faith. We did not deem it more desirable simply to make the impression that we disapproved of their customs, than to tell them of that salvation which they would recognise as above all things desirable; which their system had not to offer; and the knowledge of which, with the mode of its attainment, was the most precious deposit we could leave in their minds,—a deposit which, even though they should never see us again, might prove to them an incorruptible treasure.

Our little tent was pitched just outside the gate. Here we spent the heat of the day, receiving visitors.

One of these showed himself well acquainted with a tract which he had received at a distant place. In the afternoon we again entered the town; but not a Bramhan was to be seen, and the labouring men were all out. Numbers of women stood in the doors, watching us with lively curiosity; but to attempt a conversation would have been imprudent; for while Hinduism, less severe than Mohammedanism, permits them to be at large, it makes all their respectability to depend on the most punctilious reserve. After having nearly made the circuit of the town, we came to the shakedar's choultry, (police magistrate's office,) and found there seated a group of Bramhans, numbering not less than thirty. In front of the group, and a short distance from each other, sat two Bramhans, face to face. The junior of the two had a book open on his lap; the other was expatiating, in rapid eloquence, to the assembled Bramhans, who hearkened to his oratory with countenance attent. Thus to hear one of their number, who has adopted the profession of *improvisatore*, enlarge in extemporaneous (though not, like his Italian brother, poetical) comment on some celebrated work, is one of the most popular entertainments of the Bramhans. A junior attends the pundit to read, when he pauses, a portion to furnish him with matter for additional harangue. They were at present thus engaged; and their assembly gladdened us, as forming an admirable congregation. Advancing to the front of the choultry, we made a low salaam, and politely inquired after their health. They returned our salaam in silence, gracefully intimating that they must attend to the learned man. We made several attempts to engage them in

conversation; but no, they signified that they must not be interrupted. At length the pundit paused, and his junior began to read. We had already observed that the book was the *Punchatuntara*,* the most popular of their non-sacred writings. An acquaintance with it is essential to a foreigner who learns their language. Repeated readings had made me familiar with it; and while the Bramhan was reading, I resolved, rather than lose such a congregation, to venture upon a temerity. When the reader had ceased, and while the pundit was drawing himself up to re-commence with due stateliness, I tried to look unconscious of a breach of manners, and struck in before him, attempting, to the best of my power, to give an account of that portion of the work. The pundit stared, and the others stared with him; and it must be confessed that their looks expressed no compliment to my modesty. Resolved, however, not to be aware either of my own impudence or their surprise, I proceeded; till, having given a summary of the tale hinted at in the passage read, I added, with the design to engage them in conversation, "What a thing it is, to see thirty Bramhans, thirty learned men, studying a book which, in my country, we should hand over to school-boys!" "What!" they cried, "hand the *Punchatuntara* over to school-boys? Why, it is one of the wisest books in the world!" Their attention was gained, and at any risk it must be fixed. "Yes," was the reply, "we should consign the *Punchatuntara* to school-boys; and, what is more, there

* Better known in England as the *Hitôpadêsa*, a collection of fables, translated from Sanscrit into English by Sir William Jones.

are the Shastras which you deem so holy, some of which you Bramhans would not repeat in my hearing, they are so sacred; now, I am come to tell you that those Shastras are false." At these words, amazement, indignation, and horror played with vivid expression on those thirty countenances. It is hard to conceive a more striking display of the passions. They all opened upon us at once, with varied and impetuous utterance of the feelings roused by our astounding words. It was impossible, in the vehement strife of voices, to distinguish the sentences of any one; but the language of a Bramhan on a like occasion I well remember. "What!" he screamed, at the top of his voice, "the Shastras false! the four Vaydas, the six Shastras, the eighteen Purânas, false! Then you are false, and I am false, the sun is false, the moon false, heaven false, earth false, the whole universe false! The Shastras false! then there is nothing true in the universe." Amid the surges of wrath, the pundit alone appeared self-possessed, evidently penetrating our design to rob him of his auditory. He lifted up his hands, and endeavoured to calm them down; saying, that they had better never mind us; we were only foreign *padres*, with whom they had nothing to do: let them just attend to him. "But," they impatiently replied, "they have attacked the Shastras, and we must defend them: we should not be Bramhans, if we did not defend the Shastras." "Yes," I added, "the Shastras are false." Again the full tide of controversial choler rolled upon us, unrestrained by the looks of the disappointed pundit. A discussion now began in good earnest,—they endeavouring to drive us from the bold stand just assumed, we endeavouring to

make it good. The pundit made several attempts to regain his lost audience; but they had become too deeply engaged with us. Unable to sit by and see us in possession, he folded up his book, took it under his arm, and walked away, with a look at us neither complimentary nor thankful. After some time, the argument on their side fell into two or three hands, and eventually they all became silent. Mr. Male and I spoke, for a short time, alternately; and thus were able to sustain the discussion with less fatigue and greater vivacity. A crowd had gathered round, who watched, with obvious wonder, the progress of this assault on Bramhanic faith. When the Bramhans had all become silent, we were left at liberty to enlarge on the nature of Christianity, expounding its doctrines and its blessings. During one of the turns when the subject happened to be in my hands, the shakedar, (a Bramhan,) who had been sitting in silence, suddenly raised himself, and beckoning towards the crowd, cried out, *Swâmi!* "God!" the term by which a Bramhan wishes always to be addressed, "come in, come in: they are ruining us, and nothing at all comes to our mouth to say to them." Turning round, I perceived, by the bare head, the triple cord, and other appearances, that the person addressed was a Bramhan of the *viydyeeka*, or sacred class; and the title "shastri," on many lips, told that he was the "wise man," the astrologer of the town. I bowed low to the shastri, pointed to a place among the Bramhans, waited till he was seated, and then addressed him personally, stating what had transpired, recapitulating the points already discussed, and proceeding with the one then in hand. The looks of the Bramhans told that

they awaited a reply from the shastri with interest and confidence. In expectation of this, I paused. No reply came. Mr. Male took up the thread of the discourse. There sat the Bramhans, silent as the dumb, with their eyes on the shastri, who sat in the midst as silent as they. Whether, in the words of the shakedar, "nothing came to his mouth to say to us," we could not tell; but certain it was, that nothing came out of it. That strange silence continued: it was almost incredible; we could hardly believe that thirty Bramhans were sitting before us without replying a word, while we endeavoured to establish doctrines which would destroy all that attached their affections, or subserved their designs. It was so: we wondered, we rejoiced, we hoped. Our hearts felt glad when, as we gave them our blessing, and turned away full of prayers that grace would attend the seed just sown, we heard the people exclaiming, *Abah! abah! idu yaynu buntu? Bramhanara báyi mutsi hôeeytu!* "Wonderful! wonderful! What is this that has come to pass? The Bramhan's mouth is closed!"*

This fact illustrates the opening placed before us in the interior of India. Here, some days' march from a British garrison, is a town where the gospel has never been preached, full of idolatry, (having about thirty temples,) with an influential community of Bramhans; and yet here two missionaries impeach the reigning superstition in the most public way, and enforce the

* A memorandum, discovered since the greater part of the above was written, shows that I have confounded the services of two days; the preaching in the school-room narrated having taken place on a different day from the argument at the choultry.

claims of Christianity without the slightest molestation. Nor let any one give us credit for courage. We knew perfectly well that, however the people might oppose our doctrines, they would never dream of carrying that opposition farther than words; and that we ran no more risk of personal violence than by discussing ethics in a college, or politics in a drawing-room. At our next visit to Chayloor, we had in the morning a good congregation in our school, nearly the whole of which followed to the shakedar's choultry, where we preached again: during the day many visited us in our tent, and in the evening we preached first at the school, then to the out-castes, and lastly in a ryot hamlet outside the wall, in all which places we were attended by a considerable audience. Thousands of towns, yes, tens of thousands, as idolatrous as Chayloor, are equally open; towns within long, long miles of which the messenger hath never come "that bringeth good tidings of good, that publisheth salvation."

In visiting Toomcoor, we usually chose the market-day, and stayed for the night, preaching to the people of the town before the market began, again in the market, and in one of the adjacent villages the next morning. Once, in company with Mr. Sullivan, our assistant missionary, I took my stand at the corner of a street, where the Bramhans were passing to their morning ablutions. We soon had a numerous congregation, which several Bramhans joined. They put questions with a view of provoking discussion; but not choosing to lose such an opportunity of setting forth the gospel, I signified that they should be answered afterwards, and proceeded with the discourse. They made several fresh

attempts, which, as the people gave unbroken attention, it seemed wiser to pass without notice. At length two or three left, as if on an errand, and soon returned, accompanied by another Bramhan. He pushed in among the crowd, till he stood right before me. His air was not to be mistaken: he came to play the champion. He was of middle age, and of a countenance which unequivocally marked him as belonging to that class of clever persons who, with effervescent intellect and *aqua-fortis* temper, spend their whole life-time on the selvage of insanity. He heard a few sentences with a keen look of derision that augured little good; and then commenced a discharge of words hard as grape-shot and thick as hail. I tried to speak on, as I had done with the others; but he raised the pitch of his voice like the opening of a fresh battery, and, heating his shot, poured it out in fiery showers. I waited till, having run himself out of breath, he paused, and then attempted to resume without any allusion to him. But the mere act of pausing had refreshed him: forth burst his ire more turbulent than ever. He was innocent of argument as a bomb-shell of etiquette; yet his magnificent passion carried away the crowd. At the next pause, I made another attempt, and had got a few words uttered, when, fiercer than before, his thunder-and-lightning invectives came pealing about our ears. It was quite obvious that it would be impossible to preach in the presence of this Nabal, "such a son of Belial that a man could not speak to him!" And knowing that a congregation could be obtained in the pettah, I resolved to lose no time. Feeling, however, that to leave while he was speaking would seem as if we had taken offence,

we waited for a pause, and then said, in their own phrase, "We will go and come again," an expression which implies no promise to return, but is only a mild announcement of your intention to take leave. He now lost all bounds, and opened a tirade of personal abuse. Waiting till this was past, I said, "God bless you, we must go now; but I hope God will give you grace, and that we shall meet in heaven." Passing through the crowd, we heard them say, in an under-tone, *Geddaru, geddaru, kôpa baralilla*, "They have won, they have won, they did not become angry;" an observation which convinced us that the object of the Bramhans had been to provoke us into a bad temper, and use that as a proof that our teaching was not to be heeded.

The same afternoon, in the market, we had one of the largest congregations I had seen. In the very centre of the traffic a long discourse was heard by hundreds, with scarcely an attempt to interrupt, which, whenever made, the people themselves put down. After the sermon, some arguments were started in defence of the *Purânas*, into which we entered at full. The whole audience remained, nor did they evince the least impatience, though the entire service lasted nearly two hours. I was much struck to see present during the whole time, and with a countenance deeply attentive, the very Bramhan whose expression has been quoted above to the effect, that if the Shastras were false, sun, moon, heaven, earth, and all things must be false. He took no part in the discussion, except once or twice to say a word in our favour; but he came afterwards, bringing with him a friend from the same neighbourhood, and asked for books, saying, he had read atten-

tively those he previously received, and was much impressed with the goodness of our religion.

We started early one morning to attend a great feast at Yettanhully, a secluded village about seven miles distant. We found before the village a spacious green skirted with trees, and having on one side a small, open temple of Mâriama, the goddess of disease, in whose honour the festivities of the day were to be celebrated. Opposite this, distant perhaps a hundred yards, was a car as tall as any of the trees, which several men were decking with gay-coloured cotton flags. Several loiterers who stood by stared with genuine amazement at an arrival so unlooked for as ours. We at once joined them, and, by preaching to them, commenced the labours of the day. We next entered the village, where our appearance excited as great a commotion as would that of a pair of Namacquas in a midland hamlet, where an outlandish costume or a black face had never been seen. Men, women and children hastened to the spectacle. The men and boys closed us round, the women stood in the distance, the elder girls clung to their mothers, and the younger ones came a pace or two nearer. We opened to them the fundamental truths of the gospel, which they heard with a wondering attention. Early in the forenoon, the green began, from the constant arrival of small parties, to wear an animated aspect. Sometimes they came in procession, the woman bearing, in brasen vessels, offerings of fruits for the goddess, and all waving bunches of the sacred *cusha* grass. They proceeded directly to the temple; which having no door, we could see all that occurred. The worship consisted merely in the performance of the

namaskára, (a low bow with the joined hands touching the forehead,) at the same time handing the offering to the priest, who waved it before the idol, took a part as his own due, placed amid the remainder a light from the holy lamp, and returned it to the party by whom it was presented.

During the morning, we witnessed an Eastern greeting of more than usual interest. A young man, who had evidently come from a considerable distance, was crossing the green, when he suddenly hastened towards an old man, who proved to be his father. On reaching him, he kneeled down on the ground with an air of strong affection, placed both his hands tenderly on the feet of the old man, bowed his head low, and, lifting his hands, rested the forehead upon them for a moment. The father's countenance beamed with joy to see this filial reverence.

In every part of the ground we freely conversed with the people, and preached as often as our strength would permit. We were not debarred from any place: without hindrance, we proclaimed Jesus, now at the very front of the temple, and now leaning against the massive wheels of the car. No attempt was made to restrain us, no murmur at our intrusion on their festivities. Objections we had; but we had more expressions of assent. About the middle of the green, near the car, and directly opposite the temple, a shallow hole, of about three feet wide and six or seven long, had been dug. In the centre of this was a large pile of wood and leaves. About noon the priest left the temple, preceded by musical instruments, and bearing in his hand a light from the altar-lamp. With slow and reve-

rential formality, the music still before him, he several times walked round the pile, and then, uttering a *muntra*, applied the light. The dry leaves shrivelled up, emitting a faint smoke; but no flame was visible in the light of the glorious sun. When satisfied that the pile was ignited, he marched back to his position at the altar. The intention of this ceremony was, that those who had been restored from illness, on vowing to Mâriama that they would "tread the fire," might now have the opportunity of discharging their vow. By this time every few minutes brought in a fresh group of villagers. We were standing close by the temple when a numerous procession entered. Almost immediately, sounds of angry contention arose within. Turning round, we found priest and people, men and women, in a violent broil, scolding, clamouring, pushing, and dragging one another with hearty rage. So high did the dudgeon of some rise, that they even left the temple with their offerings, without having them presented. The dispute rose from the priest demanding a larger portion of the offerings than they judged to be his due.

As the day advanced, several men appeared, naked from the waist up, having the body painted with a chequer of light blue, and each carrying a branch of the sacred *tulasi*. These were the parties intending to tread the fire. Forming a group, and waving their branches, they raised a loud shout, and dashed at full speed from one end of the green to the other, the crowd everywhere making way for them to pass. This they continued to do for some time, apparently with the design of raising their spirits for the coming effort. At the

same time several cars, much smaller than the great one, but of the same construction, arrived, each attended by a procession and a band. Their numbers told of the power that superstition still retained; yet their being drawn, not by the people, but by oxen, spoke of its decadence. The buzz of the crowd, the movement of the cars, the sight of the votive fire, the oft-repeated shout and coursing of the devotees, and the clangor of musical instruments, all stirred the people to a high excitement. Night was approaching, and we must leave. The moment was melancholy and rousing. There were our rational brethren celebrating with glad enthusiasm these wretched solemnities. There were the mingled notes of mirth, fanaticism and lewdness going up to regale the ear of gory Superstition, seated on her throne of skulls, feasting on human hearts, and shrieking at each ray of light that fell on her bloodshot eye. We knew that these multitudes had no better hopes than she could give, no better model than she presented. We knew that the old men and the children whom the revellers had left in their villages, were, the one dying with her talons in their vitals, the other springing up with her venom in their blood. It is easy to advise a missionary not to overwork his strength; but when a man with zeal for God finds himself surrounded by thousands of heathen, there is a woe in their condition, and a fire in his soul, before which no personal considerations can stand. The sinners are before him; life is uncertain; before another opportunity he may be dead, or they may be dead. He must warn them while he has time. It is true, the effort may close his life; but that he must leave with God.

Under such feelings many a missionary hastes to an early grave. It must be so, while the proportion between the harvest and the labourers continues such as it is at present. Hoarse and weary, I again took my stand close by the fire. A large audience closed round me. The train of painted men rushed by with an exulting shout. I turned and addressed them particularly. Several stood to hear. Entreating them to consider whether a being who could delight to see them tread the fire, were worthy of worship or of execration; and whether the ascription of such dispositions to God were not most sinful; I urged them, with bold earnestness, to abandon a design so foolish,—a design which could only make them more than ever obnoxious to the displeasure of the Almighty. They uttered not a word; but stood like men convinced and ashamed. When called upon to justify their conduct, they only said, that they had made the vow, and it must be fulfilled. Night was falling; they had not trodden the fire; but we were obliged to leave.

Preaching the gospel to the heathen we regarded as our great work; but viewed the establishment of schools as an auxiliary not only legitimate, but important. We deemed it neither expedient nor lawful to merge the evangelist in the schoolmaster; and deemed a public announcement of the gospel both the most apostolic and the most direct way of bringing it to act upon the public mind. At the same time we could not sympathize with those who think that a missionary has nothing to do with schools, who expect no good from them, and who (provoked, it must be admitted, by assumptions neither reasonable nor modest) decry the

labours of those who judge themselves called to that and to no higher sphere. We felt that, however defective, if standing alone, a system of mere school-keeping, and however inconsiderate the way in which it had been advocated, yet that, viewed in connexion with other existing agencies, those excellent men who devoted themselves to that work were performing a service of prime importance to Christianity in India. To rescue youth from the deleterious education given in Hindu schools, and to store their mind with scriptural truth, is indubitably a benefit to their country, and a work acceptable to God. Situated as we were, among a population exclusively heathen, the alternative lay between very unsatisfactory schools, and no schools at all. We deemed it well to bring the youth under our influence, to the extent of which our circumstances admitted. Accordingly, at a small monthly salary, we retained a master, stipulating, that no instruction should be given but such as we approved; that the Scriptures should be read daily; that the Catechisms, with Scripture proofs, should be committed to memory; that we should visit and examine the school at pleasure; and that all the boys above a certain age should, once a month, be brought to the mission-house, to be examined with those of the other schools. One such school we established in every village, offering encouragement. Many of the masters, and also the pupils, were Bramhans; and, though occasional difficulties arose from admixing the castes, matters proceeded more satisfactorily, in the main, than might be anticipated. Many of our monthly examinations were highly interesting, the boys of various castes vying with each other in

their knowledge of the Scriptures, and of the invaluable digest of truth contained in the Catechisms. We felt that the perfect committal to memory in boyhood of these manuals, with the frequent examinations, in which the grand truths of religion, with their proofs, were enlarged, must, at least, so *tatoo* the things most essential to be known upon the memory, that they could not be effaced by any after-process.

Another important branch of operations was, the distribution of books. The Madras Bible Society liberally supplied us with the Gospels, Acts, Psalms, Genesis, and other portions of Scripture, bound separately; for, as the entire Bible occupies four large volumes, it may be supposed that it is not possible to distribute it gratuitously to any great extent. The Bangalore Tract Society readily answered our calls for tracts. For both classes of books we met with a reception not only ready, but joyful. Many a stranger left our house bearing with him, to some distant town, the first record it ever received of God's love to sinners.

We were publicly employed three evenings out of the seven, besides the services every morning. On the other evenings, I was in the habit of walking on the highway, and entering into conversation with the first passenger. This led to many most interesting opportunities of explaining Christianity to persons from various districts, and of all classes: now a merchant returning from a distant market: now a family removing; now a religious mendicant hasting to some new harvest; now a pair of itinerant Bramhans, coming to regale the imagination, and try the liberality, of their brethren; now an old woman, whose age made conversation with

her permissible; now the milkman, leading home his kine; now a group of playful boys; now a pilgrim on his weary march;—in fact, every order in turn received familiar instructions in the way to God. One evening, on accosting a fine old man, he said, with much vivacity, "I never before was spoken to by an Englishman in my own language: this *is* a pleasure! When we go to the sirdars, (government officers,) they say, *Kone hi?* Now, that is not our language, it is the Turks' language;* and we do not like to be talked to as if we were Turks." He went on to say, that he knew I must be the Goobbee padre; and that he was a gowrda from Mŭkanaikanakworté, a place many miles distant. After some conversation on religion, he said, "Some time ago, one of our people went to your house: you took him into your room, and said a great deal of sense to him, and gave him a book. He brought it home. It was the first book† that had ever been in our town, and we were all delighted. We assembled, and read it together. It was certainly a very wise book, but had one fault that much surprised us all." Of course, I requested to know what the fault was. "Oh, I must not tell you; for you would be angry." A Hindu will trust to anything about an Englishman sooner than his temper. They readily confide in his courage, or justice, or truth; but his patience is in sad discredit. It is much to be doubted whether this opinion has arisen from an excess of amiability on the part of our country-

* Hindostani, spoken by the Mussulmans.

† That means, the first printed book, to describe which, as distinguished from their own manuscript works, they have adopted our word.

men. Having repeatedly assured the good man that he need not fear, he at length said, but not without a look askance, to see if my countenance grew stormy. "The fault was this: it would not allow of any God but one! Now, what do you say to that?" He evidently regarded this, the first truth of all truths, as a grave blemish in a book otherwise distinguished by wisdom.

Thus we pursued our work, every morning and three evenings in the week preaching to the heathen, visiting them in their shops and at their doors, receiving them into our studies, mingling in their markets and feasts, walking with them on the highway, teaching their children the truths of grace, and circulating those truths in a printed form. The servants of God find many happy duties, but none to equal those. Years have passed since I preached my last Canarese sermon. I was on route to embark for England, with the sentence of the doctors over me, that, on pain of blindness, I must never again enter the tropics. The feeling that I had then, returns now,—the feeling that God removed me from the most blessed office that man can hold, because I was unworthy. Those parents who consign their sons, who have the heart for a higher calling, to a life spent in making bargains, or plodding lawsuits, or swaying with gentlemanly satisfaction the small sceptre of some decent neighbourhood, little know the treasures of grand emotion from which they shut them out,—treasures to be found only in preaching Jesus to the heathen, and for one year's enjoyment of which any man with faith to look to heaven would cast to all the winds the most grateful respectabilities of private life, the

most pompous commercial success, or the most flattering professional distinctions. He whose heart once heaved with the desire to live and die preaching Christ, but who, by a preference on his own part, or that of his parents, for the things precious in this life, has been withheld from the work, may sit him down and weep. He has lost what he will never regain. He lives a poorer man, (for wealth consists not in what a man HAS, but in what he IS,) he will die with an undergrown soul, and to all eternity will lack joys and honours that others, mayhap less fitted to win them, will wear with glorious triumph. In immortality there will be no secrets. Every man will know the whole of his history, and the causes whereby its complexion was decided. Full many a Christian father may take to his soul the assurance, that the son of his doting love will know, that he is for ever and ever abridged in rewards in consequence of the influence under which he preferred, to the toil of Jesu's ministry, comforts the very names of which have perished, pomp that has been swept from the universe of God, and pelf that was burnt up with vulgar clay. He will know that to this influence he owes it that he is behind others, behind what he might have been; and owes it, that he dwells in heaven as a refugee, when he might have marched among the princes of God; that he glimmers in nebulous distance, when he might have shone "as the sun in the kingdom of his Father." Many a lofty mother will be well humbled when she sees her peerless boy, who was too good to resign to God, too precious to be spent for Christ, too tender to toil for souls, placed, and that irrecoverably, far behind the son of a lowly neighbour; when she sees hardships, and

studies, and torrid heats, the lonely dwelling, the unshared anxiety, the untended sickness, all transmuted into illustrious forms of ornament and joy, enhancing the bliss of him who suffered them, and of her who, for Jesu's sake, yielded him up to suffer; while station and revenues, mansions and equipage, the stare of the vulgar and the smiles of the *élite*, have long, long ago, ceased to give either satisfaction or excitement. Let every mother, to whom the Lord has given a son with a mind capable of a better life than one of barter, know that she can take no step that will so certainly impoverish and abase him, as to pervert his aspirations from pursuits that lead straight to "glory, honour, and immortality," into those which are competent to the most vulgar intellect or the most selfish heart. Next to the hour that brought me to the love of Christ, I shall ever most bless that hour when she who loved me most said, "From the Lord I received thee, and to the Lord I give thee up." I wept at that parting; but I wept far more when parting from the work that had become dearer than all earthly things. My missionary race was short. God made it so. But, looking back this day, I would not for the universe have that brief space blotted from my existence.

The people of India resemble their own banyan. Viewing their distinctions of nation, language, and manners, you would deem them (like the stems of that noble tree) standing clearly apart; but you find that, as those stems have sprung from the same root, and are pervaded by the same sap, so a common literature, a common religion, and, above all, the institution of caste, give to those several nations a remarkable unity,

—a unity which serves to transmit through the whole some effect of an impression produced on any part. Imperceptibly, but infallibly, every blow dealt on one point of the Hindu structure affects the entire pile. The impulse given in Tinnevelly vibrates to the Himâlaya; the shock felt in Bengal thrills to Travancore. The whole population is cemented. No individuality exists. Each family and each caste is impacted in itself, and concreted with all the others, each person forming but a particle of the mass. A man's mind consists of the traditions of the ancients, the usages of his caste, and the dogmas of his sect: independent principles, independent convictions, independent habits, he has none. He is neither more nor less than an atom of the public mind, bearing the type impressed by those with whom he is in contact. Such he is, and such he deems it wise to be. He is an integral part of a mental system, vast by the sweep of nations, solid by the action of ages, and ponderous by countless accretions. You cannot move him without disintegrating the mass. It is no light work. A Hindu mind is not dissevered from the system, but by the application of vast forces. Slowly and painfully it disengages itself, it halts, and heaves, and writhes before finally parting:—and many (even some missionaries) treat this as an obstacle to the spread of Christianity in India. Is it so? Most indubitably, if the object of Christianity be to gain, in a few years, a given number of converts. But if her object be to pervade all the regions of Hindustan, to imbue with her truths the people of every hamlet on those oceanic plains; then the social bonds which at first retard individual conversions, so far from being ob-

stacles to a universal revolution, are but agencies which infallibly conduct to the remotest depths of the country the impression made by the missionary at the surface. He may be impatiently thinking that the solidity caused by these bonds has reflected into vacant space the impulse he had applied; while, in fact, by that very means it is transmitted through many a region unseen by him, and is even then vibrating at the core of the mass. It does seem clear, that when you have a moral force equal to effect the change designed, the more close the mutual dependency of those to be acted upon, the more wide the influence exerted by every application of that force. Where the population is limited, and the relations of society are loose, it is, humanly speaking, comparatively easy to convert a man to Christianity. His conversion is of unspeakable importance; it saves a soul from death. But what relation has this event to the stability of Satan's empire in the continents that contain more than half the human family? Scarcely any. A jewel has been snatched from destruction, but no stone struck from the foundation of the citadel of evil. Not so with the conversion of one forming part of a system which embraces a continent. His escape rends a link in a chain whereby millions upon millions were bound. Every individual who, overcoming the restraints of Hinduism, embraces Christianity, effects, however unconsciously, an achievement by which Asiatic superstition is one degree weakened, and the way to grace made, for the people of nations, one degree easier. Little undertakings have speedy issues. Great undertakings are of slower consummation; but a large soul would rather effect the feeblest service toward the ran-

som of multitudinous people, than reap the hasty delights of a small achievement, begun and ended in a lifetime, but, when ended, leaving the great interests of the human kingdom as they were before. To one who thinks for the present only, the peculiar features of Hindu society will appear most formidable obstacles; to one who thinks for a century, they will appear the most certain instruments of universality in the ultimate triumph. It would be an undertaking of appalling magnitude to attempt the conversion by units of two hundred millions of souls. The ties that bind them together more increase the hope of universal regeneration, than they diminish the facilities of partial change. All that we lose in velocity, we gain in power. In no country will individual conversions, in a given locality, be slower at first than in India; in no country will the abruption of masses from the "great mountain" be so vast or so rapidly successive. Some time ago, this would have been called "speculation." The events of the last seven years prove these views to be just. The thousands who have lately embraced Christianity in neighbourhoods long under missionary culture, are so many witnesses in their favour; witnesses, also, that the impatience that would decry a great continental mission, if its conversions be not so rapid as in little islands of savages, is the result, in some cases, of unbelief, and in others of ignorance as to the character of the enterprise; an ignorance which frequently consists, even in its highest degree, with what is called "intelligence."

Around Goobbee appeared many signs of that gradual change of public opinion which must precede every re-

volution. Things ancient and venerable were losing their influence; startling questions were broached in private circles; the gods were not dreaded or trusted as before; and, above all, the whole people avowed a belief that their religion would pass away. Several times, when I have said, to persons declaring themselves resolved to die in the paths of the ancients, "All the idols shall perish, and every knee shall bow to the Lord Jesus;" they have replied, in a tone of pensive assent, *Ideetu*, "It will be so."

CHAPTER VII.

INDIA: WHAT IS IT?

Physical Outlines—Partly Tropical, partly Temperate—Its Productions—Its early Trade—Course and Effects of the Trade—Its Influence on our Marine—On our Trade—On our social Life—Arithmetic—Its ancient Science—Its Influence in Religion—Teaching Egypt—Converting China—Our Conquest—Its Results—Where lies the World?—The loud Call.

INDIA is a region more than twenty times as large as England and Wales, and equal to the united extent of France, Spain, Portugal, Italy, Greece, Turkey in Europe, Austria, Prussia, Bavaria, all the minor German States, with Belgium, Holland, and Denmark. Its people are divided into thirty-five different states, speaking thirty different languages.* They number two hundred millions; a population equal to that of the whole continent of Europe, and comprising at least one-sixth, probably one-fifth, of the entire human race.†

* These languages, though, like the tongues of Europe, having close affinity one with another, are quite as widely separated as they, and in some cases more so.

† In a Lecture on the "Extent, &c. of the British Empire," I have said, "For proof that this, and not the common estimate of 130,000,000, and such like, is correct, see the works of the Count Björnstjerna and Montgomery Martin. The latter shows that the population of 422,990 square miles, the only portion of India for which there are correct returns, is 89,577,206; but the entire area of India is 1,128,800 square miles, consequently these 89,000,000 are the population of little more than a third of the country, which must therefore contain considerably above 200,000,000.

China excepted, India is the most populous country in the world.

Its physical outlines deserve a word. That magnificent mountain-chain which runs eastward from the Caspian Sea, traversing Asia, is interrupted as it approaches the vale of Cashmere by an opening which parts the Hindu Coosh on the west from the Himâlaya on the east. Through this opening the Indus descends from the plains of Thibet, and, separating India from Affghanistan and Beloochistan, forms its western boundary.* On the north, for a length of fifteen hundred miles, an uninterrupted barrier is formed by the gigantic Himâlaya; while the Brumhapootra, rounding the further extremity of that chain, marks the eastern frontier. The two sides of the triangular peninsula which constitutes its southern termination rest respectively on the Arabian Sea, and the Bay of Bengal.

Starting from the Indus, and proceeding eastward, every stream encountered for about four hundred miles takes the direction of that great river, and runs southerly towards the Arabian Sea. The whole tract covered by this geological level is called the Plain of the Indus, and includes the Punjaub, Scinde, and neighbouring states. Further eastward than the above limit, all the streams are found to take the same direction as the Ganges, flowing toward the Bay of Bengal. The tract covered by this level, although extending over a length of about one thousand two hundred miles, with a breadth of six hundred, is called the Plain of the Ganges, and includes most of the Bengal provinces. On

* This river is said to discharge in the dry season eighty thousand cubic feet per second.

the southern limit of the Plain of the Ganges, or six hundred miles south of the Himâlaya, you encounter a lofty range called the Vindhya Mountains; and south of these a great river (the Nerbudda) flows to the west, having a second range of mountains (the Sautpoora) on its southern bank; beyond these you find a second noble river (the Tapty), flowing also to the west, while southward of it rises a third chain of mountains. But having ascended these, instead of finding a ready descent to carry you down on the other side, you discover a plain, level with the summit of the hills, and stretching in gentle undulations beyond the southern horizon. Proceeding in that direction to discover a descent from this wide-topped mountain, you travel eight hundred miles before passing from the elevation to the same level as that from which you started. This elevated tract, varying in breadth from one hundred to five hundred miles, forms a third geological level, inclining strongly from west to east, as is indicated by the course of all its rivers: it includes the Mysore, Ceded Districts, Hydrabad, Berar, and Mahratta territories. A person will form a tolerable conception of the relation which the countries lying on this plateau occupy to the rest of India, if he just think,—The island of Great Britain stands up from the sea at a certain elevation: now, suppose that elevation increased till every cliff round the coast were as high as Snowdon, the whole surface of the country being proportionally raised, then our fields would hold the same position toward the beach, as the kingdoms just named do to those lying at the foot of the Ghauts; while the mountainous heights up which one ascending from the beach must climb,

would exactly represent the Ghauts themselves. A tract of table-land is in fact the very same natural phenomenon as an island, only that the one is surrounded by land, the other by the sea.

The Plain of the Indus, the Plain of the Ganges, the central mountainous district, and the grand plateau, are the leading physical divisions of India.

It is an error to take India as a whole for a tropical country. It is true that part of it lies within eight degrees of the equator; but then such is its magnitude that another part lies more northerly than Jerusalem, and little more than a degree south of Gibraltar. So far from being all a tropical country, in starting from the northern limit of Cashmere you travel nearly seven hundred miles before entering the tropics. Lahore, the most northerly capital, and Trinchinopoly, the most southerly, are two cities as far apart as Stockholm and Naples, and with climates equally diverse. Thus, while in some of the kingdoms of India snow has never been known, in others it comes with every winter; and the name of that matchless chain which embattles its northern frontier signifies "the dwelling-place of snow."* Again, from the circumstance that so large a

* *Him-âlaya.* It has been thought that all land above ten thousand feet high was perpetually covered with snow: but this opinion is completely contradicted by our knowledge of the Himâlaya. It is observed also that on the northern side of this range the line of perpetual snow lies at a much greater height than on the southern or more sunny side, a result just the reverse of what might be anticipated. The Count Björnstjerna remarks, that "the cause of this must be the greater purity of the atmosphere" on the northern face of the chain. It would be much more natural to ascribe it to the fact that the land of Thibet on the north of the chain lies at an immense elevation above Hindustan on its south, consequently its heat affects the mountains to a point corresponding to its own height.

portion of tropical India is table-land, a climate is secured many degrees milder than if it lay at the natural level. This diversity of climate gives rise to a great diversity of produce: India rears crops of rice and of wheat,* of maize and barley, with equal variety in fruits and vegetables.

Let it, then, be remembered that India is not one state, but thirty states; not a country of one language, but of thirty languages; not a tract of uniform heat, but a region of various climates; not the residence of one tribe, but of a *sixth of all the men that live.* These things must not merely be read as statements. They must be viewed, dwelt upon, felt, as facts. Much depends on this: the share of your benevolence given to India will be ruled by your conception of what it is. Your heart will never kindle with an interest appropriate to its claims, until you carefully and clearly set it out before your mind, as a large family of populous nations, which comprises one-sixth of all the hearts that are now throbbing.

The productions of India nearly exhaust the catalogue of things precious in the mineral, vegetable, and animal kingdoms. The trader looks at the mercantile worth of its spices, jewels, grains, sugars, cotton, silk, indigo, tobacco, woods, ivory, drugs, and perfumes. The naturalist pores enamoured over its Fauna, its Flora, and its mineralogy. But no eye looks so wondering on those productions as that of the philosophic or the Christian historian, who traces the power they have in

* It is not generally known that Indian wheat is an article of import in England, being used principally for glaire in manufactures.

all ages swayed over the social state of the world; the ways innumerable in which that power is now pervading all civilized life; and the certainty, every day growing clearer, that hence will spring changes which, for the magnitude of the spheres affected, the value of the benefits conferred, and the splendour of the consequent career, will shine without parallel in the annals of man.

This, though perfectly intelligible to those versed in the history of the connexion between the West and the East, requires, for others, some explanation.

The strongest tie used by Providence to preserve the relation of people to people, is the craving of men for productions not indigenous to their own climate. Had all nations found at home everything necessary and agreeable, it is impossible to conceive to what extent their mutual alienation might have proceeded. China and Japan help us to an idea of that which, in such a case, would have constituted nationality. But while God gave to all men the capacity to enjoy every good thing the earth yielded, he mercifully appointed its productions so that each individual should receive many of his gratifications at the hand of his brother who bore a foreign tint and spoke a foreign tongue. Each was constituted co-heir of all the riches of the family estate: but he could inherit only by virtue of a family compact. Hence arose international commerce; and, as its necessary result, intercourse between distant people, the knowledge of each other's tongues, and the formation of mutual interests.

The productions natural to India excited from the earliest times the desires of all nations lying to the

west; while their portability facilitated transport even before the existence of those means of carriage required by the unwieldy commerce of the present day. Spices, jewels, perfumes, and silk, while the very articles certain to be craved for, were yet such that a camel-load formed a considerable investment.

Persia and Arabia first received these luxuries, and communicated the taste for them to their western neighbours. The Phœnicians, when no longer content to receive this commerce at second-hand, launched upon the Red Sea, brought their merchandise direct from the ports of India, and, conveying it across the Isthmus of Suez, re-shipped it at Rhinocalura on the Mediterranean; hence they carried it to Tyre. The wealth which they derived from this traffic so impressed Alexander when he became their captor, that, in order to divert it into another channel, he founded a city at the mouth of the Nile, to which cargoes could be easily conveyed from the Red Sea, and from which they could again be distributed round the European ports. He had calculated justly: the new city soon became the entrepôt of the Indian trade, and, deriving from it the same advantages as Tyre, won eminent wealth and power. Throughout the revolutions of many ages, Alexandria preserved, by its position, the regular flow of this traffic, with all its lucrative results; nor did this cease till the Mohammedan conquest cut it off from the intercourse of Europe. In the mean time another branch of the same trade had raised up in the Syrian desert Palmyra, which, growing upon the wealth that trade ever conferred, reached great magnificence and political power; but after a long struggle fell under

the all-humbling arms of Rome. When the Mussulmauns had conquered Persia, observing the advantages which this trade brought with it, they founded Bosrah with the same views as had dictated the building of Alexandria; and the new city rose into note with a rapidity little less remarkable than that of its Egyptian predecessor. At this point we first observe a religious reaction upon the East from those whom its produce had led to its shores. The Mohammedans, urging their way to the eastward of India, where neither the Tyrians, the Egyptians, nor the Romans had penetrated, founded settlements on the shores of the great Archipelago, whence arose the extensive diffusion of their doctrines, now observable in those regions. A day was to come when the same material channel should convey to those shores a spiritual power both milder and more potent.

The wars of Islam for a time closed Alexandria to the nations of Europe; but so unconquerable was the desire for the commodities they had hitherto received through that port, that, notwithstanding the difficulties of overland carriage, such was found. The merchandise of India was now borne across the rugged countries lying between the Indus and the Oxus, and forwarded from the latter river to the Black Sea. Constantinople thus became the emporium of the Indian trade; and thence acquired an affluence by which she was enabled to maintain her political existence much longer than she could otherwise have done. The tendency of this trade to aggrandize whatever people happened to possess it, was forcibly illustrated when the inconsiderable republic of Venice, gaining the traffic between

Constantinople and the rest of Europe, rapidly attained to splendid opulence and formidable power. Genoa also, for a time supplanting Venice at Constantinople, gained an eminence very surprising for its limited extent and unsettled government. The Crusades carried to the Levant some of the inhabitants of every considerable country in Europe. There they became acquainted with the productions of India: many now saw sugar, cotton, silk, and various kinds of spice, for the first time. The warriors returning home carried back a relish for these commodities, and inflamed the desire for them in the minds of their countrymen. Hence the Indian trade increased beyond all precedent, and raised Venice to a height of power and magnificence that moved the envy of all Europe. Every eye turned covetously toward the region whence flowed these streams of wealth. Attempts to share the advantages were made, but rendered abortive either by the power of Venice, or by the unfriendliness of the Mussulmauns, who held every path of access to India. At the same time the descriptions of that region given by Marco Paulo inflamed to feverish excitement the desire to reach its shores.

Amid the general devising of projects to arrive at India, Columbus, arguing from the earth's sphericity, concluded that country might be found by sailing to the west. He made the attempt; and, in failing, discovered a new world. At the same time the Portuguese were led to coast along the African continent, in hope of discovering a passage to the land of so many real treasures, and so many fabled wonders. They found it. With these two discoveries a new era opened on

Europe, affecting with the most important changes her politics, her commerce, her manufactures, and even her social manners; while revolutions not less signal hastened in every other region of the world. As we look at those revolutions in their past developments and future promise, and ask, What was their cause? the answer is, Under Providence, the productions of India.

Portugal possessed for nearly a century a monopoly of the commerce with India, reaping the wealth that had ever been its fruit. In the mean time England, searching in the north-west for a passage to the same region which the Portuguese had reached by the south-east, formed relations with North America, from which important effects have flowed both in our own history and that of the new continent. As if destined, by elevating inconsiderable states, to demonstrate the real magnitude of its influence, the eastern commerce passed from the Portuguese to the Dutch, then a people in feeble infancy. It raised them to the head of the maritime powers; but the stream, turning from them to our own shore, has steadily flowed thither during the last century, swelling our affluence to a height never before seen in the tide of human affairs.* During that period has arisen the most wonderful of all the phenomena resulting from the influence of India's produce. Attracted to her shores, and contending for her treasures, the nations of Europe gradually became mixed up with Indian politics. Hence it has followed that an Eu-

* The best account of this interesting branch of history is in Robertson on India, in which the course and the effects of this trade are most ably traced. Every man who wishes to understand the history of commerce ought to read that book.

ropean empire is established over two hundred millions of Asiatics, that they have been trained in the European art of war, that their institutions have been ameliorated by the spirit of British law, that scriptural Christianity has commenced her action upon their mind, and that a boundless prospect is opened of grand regenerative changes.

A moment's reflection on this hasty summary of facts will show how deeply universal history has been affected by the productions of India. They gave Tyre its fame, and made its merchants princes. They raised Solomon's "Tadmor in the wilderness" to the Palmyra of stately palaces and potent armaments. They created Alexandria, and filled its port for ages with the merchants of Greece and Rome. They sustained the sinking empire of the East, enriching and adorning its capital long after her western sister had fallen. They, during the middle ages, enabled petty Italian republics to outshine even great kingdoms. They stirred the genius of European enterprise to fret against the limits that had caged her so long, until at last, breaking forth, she made the circuit of the world, and brought back to her children wealth gathered from every land. No people on earth have been wholly free from the effects of this influence. The few hapless Carribbs that linger in the West Indies, when they think of the wrongs their fathers sank under, and see the invader rejoicing over all their isles, may ask, "What first brought our destroyers here?" The reply must be, "India." The Red Man, as he sees the forests of his tribe turned into a garden for the stranger, may ask, "What brought them first across the great waters?" "India." The

Esquimaux, seeing our sailors shiver in their snows, or the Indian of Labrador selling us his furs, may ask, "What first led them to lands so chilly?" and he must be told, "The search for India." The Negro seized for slavery, the Hottentot staring at civilized industry, the Kafir ravaging the white man's homestead, the New Zealander fighting for his field, or hearkening to the gospel, all may put the same question, "What first led white men to our shores?" And to all the reply must be, "India." That country has been the means of most powerfully affecting the state of all this world. Her productions have been the most influential physical cause in modern history.

To make more palpable the part India has taken in the history of modern nations, let us consider for a moment her influence on England. Take our SHIPPING. The vessel that first brought the produce of the East direct to England, that in which Drake had circumnavigated the world, was of one hundred tons' burden! The length of the voyages which the new discoveries made necessary, the magnitude of the demand for the foreign productions, the necessity in times of war to join defence to carriage, all led the conductors of the Indian trade to a style of ship-building hitherto unknown; and from the example of their magnificent fleets the whole marine of the country enlarged its proportions. In our COLONIES, again, we have a system by which our own condition has been materially affected, and new states created on other shores. This system wholly issued from the discoveries made in seeking various paths to India. To reach India we went westward, and found the West Indies and America. To

reach India we went northward, and found Labrador. To reach India we rounded the termination of South America, and found the South Seas, where lie Australia and New Zealand.* To reach India, the coast of Africa was explored. To enable them to command the trade with India, the Dutch colonized the Cape of Good Hope; and for the very same reason we drove them from that possession.

Our TRADE, not less than our shipping or colonies, testifies to the power of India. Those articles which strike all as the most lucrative are either such as originally came from India, or to which that country first introduced us. Tea, for instance, though the production of China, became known to us only through our Indian trade; and perhaps those who are ready to imagine that without that beverage daily comfort would be impossible, will be surprised to learn that no mention of it occurs in the records of the East India Company till sixty-seven years after it had been chartered. Only then was their factor at Bantam instructed to procure "100lb. *weight of the best tay he could gett.*" The sugar-cane, again, had been transplanted from India to western Asia, where it was unknown in earlier times; there it was seen by Europeans during the Crusades, thence brought to different parts of the Mediterranean, thence introduced to Madeira and the Canaries, finally to the West Indies and Brazil.† Hence arose the ex-

* These various routes were sought, because the Portuguese claimed an exclusive right to that which they had discovered; and had their claim forfeited by the Pope's authority.

† Some think that the sugar-cane was indigenous to South America; but I believe all are agreed that for the manufacture of sugar from the cane we are wholly indebted to India.

tensive use of that tempting luxury, hence the slave-trade, hence our missions to the West, hence the noblest strife of philanthropy, hence the sublimest record of colonial legislation. Cotton also originally came to us from India.* By the trade which the Romans maintained with that region through Alexandria, this light and agreeable fabric was first made known to Europeans, and became valued among the luxuries of the imperial city. During the middle ages the Venetians supplied enough to create a desire for more. The Moors introduced the plant itself into Europe, and thus the way was prepared for its general reception. When a direct commerce was opened with India, cotton was imported from Calicut; and hence the name "calico." Silk was first introduced to India from China; (as cotton was introduced to China from India;) but for many ages it was supplied to Europe wholly through India. With these facts before us, it is altogether unnecessary to remark that our manufactures have not less felt the influence of India, than the other branches of our national activity.

To estimate the influence which, through all these channels, India has exerted on our national character and domestic habits, is a sheer impossibility. The changes that have passed upon our homes by the introduction of silk, cotton, tea, sugar, and spices, are now too distant and too many to permit accurate enumeration. Strike these articles from our imports for a single year, and you will produce a revolution that would help to illustrate the magnitude of their influence; but yet

* Baines's History of the Cotton Manufactory.

even that would not conduct us back to the same manners, the same modes of thought, and the same physical condition which began to depart when these new comforts entered, and have since been gradually yielding to softer and more luxurious habitudes. These articles have metamorphosed both our persons and our tables: we neither dress nor eat as did our ancestors. They have entered not only the highways, but every bye-path of society, which marches not a step but in their companionship. Take our remotest homestead; and though the inhabitants have no knowledge of foreign parts, and never considered themselves debtors to India, yet on every male and female you will find articles of clothing, and at almost every meal either food, beverage, or condiment, which were unknown in their hamlet before the way to India was opened. The debt to India is universal; no man in the community is free from it; it contributes to the comforts of all. Everything we look upon testifies to the grateful influence of its productions,—the luxuries of the most refined, the comforts of the most economical, the garments of all. We do not survey a room, we do not enter a shop, we do not take a meal, we do not look upon the dress of a child, without encountering some memento of the universal debt to India. In the saloons of our nobles, the mansions of our gentry, the houses of our tradesmen, the cottages of our workmen, and the chambers of our sick, we find India contributing helps to comfort or ameliorations of pain.

Who then can look with a well-instructed eye on the present state of the British nation, without being amazed at the influence that has been exerted upon us by a

country so far away; and a country the people of which never meddled with our concerns? India never sent an expedition to our shores, and yet it has diffused its influence through every vein of our national life. We see it in our refined clothing and our sumptuous boards, in the stir of our ship-yards, in the magnitude of our marine, in the splendid heritage of our colonial possessions, in the manifold issue of our factories, and in the ubiquitous commerce with which we are pervading the world. Nor have we been alone: changes have passed over the condition of man from Italy to Scandinavia, while newly-discovered tribes have shared in the universal impulse. Let no one, then, regard the productions which form the chief articles of commerce as created to gratify foibles, or make fortunes. They are the ties by which the All-wise has held together the most distant races of men, provided for the general diffusion of local blessings, and finally called forth the nations on whom his truth shone, to enlighten their brethren who sat in darkness.

The influence of India has scarcely presided less over man's intellectual than over his material history. To take a very obvious proof: every one feels the prodigious benefit of being able to express the endlessly-diversified records of arithmetic by only ten ciphers. Into what consternation would all the counting-houses and all the observatories of Europe be thrown, were a decree to reach them that their accounts must be kept, and their calculations made, according to the Roman model, in the letters of the alphabet! Yet, only a few centuries ago, this was their method; for no language of Europe, or of Western Asia, furnished a more com-

pendious arithmetical notation. The Hindus had invented, in very early times, the system now in universal use; from them it had been adopted by the Persians and Arabs; and it is matter of dispute whether it reached Europe before Leonardo of Pisa,* in the thirteenth century; but it seems more probable that it was brought to Spain by the Moors. Its progress among men of business was very slow. Had it not been for this invention, the rapidity with which the largest commercial transactions are now executed would have been impossible; and if the calculations of astronomy could have been conducted at all, it would have been with immense difficulty.†

It must be felt that the nation who took the lead in astronomical science would gain immense influence over the mind of other ancient people. Though the controversy on this subject cannot be fairly said to have yet led to a conclusive decision, yet it has established the fact that Chaldea, Egypt and China are to be set aside, and that the whole of what deserves the name of science lies betwen Greece and India. With them only has been discovered knowledge that could serve as a basis

* He made known the system of algebra, also a Hindu invention. For full information see the article "Arithmetic," *Encyclopædia Metropolitana*, or *Penny Cyclopædia*.

† Take the quantity 333, and by the Roman notation you have just treble the number of figures, and those more complex, cccxxxiii. The principle of the Hindu invention is to increase tenfold the value of a cipher for every time it is removed from the final digit of the series. There cannot be a doubt that the possession of this unequalled vehicle for numbers tempted the Bramhans into those extravagances by which they play, in their sacred books, with billions of years. Archimedes is said to have written a book for the purpose of proving that it was possible to express such numbers as were familiar to every Bramhan in India.

to the stupendous fabric of modern times. In comparing the system of these two nations, the Hindu astronomy has been found to be more correct, as regards the precession of the equinoxes, the length of the tropical year, and the synodic periods of the moon. Add to this their unquestionable antecedency to the Greeks in civilization; their great superiority in arithmetic; their sole possession, at first, of algebra; with their habitual indisposition to receive instruction from foreign nations; and it can scarcely fail to appear that probability leans rather toward the precedence of the Hindu, than the Greek, astronomy.* Perhaps when we have become as familiar with the history of science in the East, as we are with its history in the West, this probability will ripen to demonstration. The early progress of the Hindus in logic, ethics, poetry, and metaphysics, is universally acknowledged; and enabled them largely to influence the literature of other civilized nations.

But the most gigantic effects produced on the world by India, have been in the field of religion. The extent to which the Greeks and Romans, and through them all Europe, borrowed religious usages and tenets from the Egyptians, is matter of universal notoriety. Even some of the superstitions now prevalent in Christendom can be traced, through mediæval and Roman modifica-

* This is further confirmed by the fact, that while the Greeks sent their sages to study in India, we have no account of Hindu sages seeking light in Greece; and though it may be true that the Greeks did not commence this practice till after the solid foundation of the science had been laid by Hipparchus, yet it could only have begun after Hindu learning had been long and highly prized by their philosophers. This whole subject is well treated in the *Penny Cyclopædia*, article "Viga Ganita."

tions, to an Egyptian original. When India and ancient Egypt began to be known, a remarkable similarity was observed in their rites and institutions. The mutual divisions of castes, hereditary trades, the worship of the ox, the resemblance between the *linga* and the *phallus*, the agreement of the mundane egg with the Hindu doctrine of creation; all attest a close connexion. The question arose, Which nation had taught the other. It was very natural that Europeans should at first attribute the precedency to the country from which the earliest lights of civilization had reached their own regions. But with the advance of knowledge opinion has gradually changed; and now the accurate author of the "Theogony of the Hindus" appears to have set the question at rest, adducing proofs, that amount to all but demonstration, that Egypt derived from India, and not India from Egypt.* This point once conceded, we view a prodigious field, on which the mind of India has moulded the character of man. The prevalence, in times of authentic history, of the Hindu doctrine of metempsychosis, is a forcible proof of their religious ascendancy; for they not only impelled that dogma through the schools of Greece, but even into the cre-

* His proofs are: 1. It is testified by Herodotus, Plato, Solon, Pythagoras, and Philostratus, that the religion of Egypt proceeded from India. 2. The monuments of Egypt testify that the religious system gradually descended from the south towards the north. 3. The chronicles recorded by Josephus and Eusebius state that the religion of Egypt came from India. 4. Asia was first peopled. 5. Tradition marks central Asia as the first home of man; consequently, India would be peopled before the valley of the Nile. 6. We have history to this effect. 7. The Abyssinians have a tradition, that the first inhabitants of their country came, by way of the Red Sea, from a remote country in the south.

dence of the Jews themselves. Whether we adopt the views of Mr. Higgins with respect to the "Celtic Druids," or place that remarkable hierarchy in the more sober position assigned to it by the author of the "Religion of Ancient Britain;" and whether or not we join the Count Björnstjerna in affiliating the Edda* of Scandinavian mythology to the Veda of India; we cannot doubt that at the time of our Lord's appearing, every civilized people in the world, except (perhaps) the Chinese, held religious doctrines adopted more or less directly from the Hindus. Since then a still more signal illustration has been given to their religious power. Shortly after the opening of the Christian era, Fo carried into China Budhism,—a religion which had sprung up in India as a reform of Brahmanism. Such has been its spread, that, according to some high authorities, it has now three hundred millions of disciples in that country; while, I believe, none would demand a larger deduction from this number than fifty millions. When to these are added the Budhists of Thibet, Tartary, Birmah, Siam, Japan, and Ceylon, we arrive at the unquestionable conclusion, that this creed far surpasses any other in the number of its adherents. If we take the Budhists at three hundred and fifty millions, (thirty millions less than they are estimated in the "Theogony of the Hindus,") and the adherents of Brahmanism at one hundred and fifty millions, we have then five hundred millions of the world's existing

* The Edda, though not composed till the eleventh or twelfth century, is supposed to embody the tenets introduced by the second or third Wodin before the Christian era; in which tenets the learned Count discovers Budhism.

population under the power of creeds originated in India. Nor will any one attentively survey the countries over which these systems extend, and compare them with the whole world, without concluding, that, whether these numbers be too great or too small, at least one-half of the human race are worshipping at the altars of Budhism and Brahmanism.

Until within the last eight centuries the Hindus enjoyed a singular exemption from foreign rule. The ancient Persians held, for some time, a province on their north-west frontier; across the same frontier, Alexander made a short inroad, which has not left even a trace in their histories; but their whole career, up to the above period, had been free from any grand conquest by a foreign power.* Hence much of their maturity in political and literary civilization; for, in domestic civilization, which Christianity alone creates, they have always been, and still remain, exceedingly backward. In the beginning of the eleventh century, the scimitar of Islam inflicted the first severe wound upon the independence of Hindustan. After the princes of that fierce faith had been established for about seven centuries, the whole of India might be regarded as subdued, under the sceptre of Aurengzeb. By a succession of events, without any parallel in history, and without any explanation, but in the will of the supreme Ruler, those nations, so long exempt from conquest, and over which even Mussulmaun ardour so slowly won dominion, have passed one after another, until they are all now united, under the British power.

* I do not here touch the perplexed question whether the Bramhans themselves were not a race of invaders.

This conquest, unique in its rapidity, has been not less unique in its results. The ordinary effect of conquest is to abase the vanquished, to abridge their liberty, check their enterprise, and preclude all improvement. In this case it has been just the reverse. The conquered have augmented their liberty, recruited their commerce, received a new impulse in literature, and had cast into their lap many of the fruits of western civilization. By this conquest, India, so far from being reduced in moral influence, has been raised to a position from which she will lead Asia in the modern march of civilization, as she did in the old. By its means, she, of all Asiatic countries, first receives the true philosophy, first knows freedom of person, freedom of commerce, freedom of conscience, and freedom of the press. She will also be the first on which the steam-engine and the railway will confer their prodigious influence. These things give her advantages to which none of her neighbours can pretend, and by which she will excite the emulation of them all. Geographically, she occupies the very focus of Asiatic power and refinement, having on the one hand and on the other the countries most important to be influenced, and most accessible to amelioration. The Budhist of eastern Asia looks to her as the father-land of his faith; the Mussulmaun of western Asia, as the region where sparkled the most gorgeous monarchy of Islam; while on her plains are the co-religiónists of the one and of the other, to carry out a grand mission when a regeneration shall have blessed themselves. Up to the present day, Jerusalem, Rome, and Mecca, usually held to be the chief springs whence religious influences have gone forth upon the world, have not all of them together

commanded the faith of so many human beings as Hindustan. The history of the past not only warrants, but demands, the expectation that the conversion of that country will bring results on a scale far grander than any that have yet been witnessed.

It is strange with what coolness even well-informed persons speak and write of the few nations of Europe, as if they constituted the world. True, others are known to exist; but, in the usual thinking of most persons, "all the world" is at peace, when Europe reposes; "all the world" in pangs, when Europe is at war; and Wellington and Napoleon are celebrated "all over the world." Alas! how little is the world of most minds! how far short of the wide, wide field, all over which the hearts of men are throbbing! Far more than half the world never heard Napoleon's name; far more than half the world neither know nor care what are the relations of our potentates; far more than half the world could not tell you whether Europe is one country or many. We are not a quarter of the world's population; and yet, because we have received from Christianity elements of greatness that lift us above our fellows, we are ready to regard them as but distant retainers of the human family, we only constituting its circle. From the soil of Asia man was formed, in Asia he had his Eden, on a hill in Asia rested the ark that saved him in the day of ruins, in Asia he spent his early years, in Asia he has always had his chief dwelling, and on Asia dropped the blood that bought his ransom. The eye that watches all the world, has ever seen in Asia far most hearts beating, far most mothers rejoicing over their newly-born, far most houses mourning for

their dead. If any section of the earth might call itself the world, Asia would be the world: Europe does not contain half so many human hearts. The merchant sees the world where he sees trade, the *literatus* where he sees readers, the soldier where he sees renown, the man of fashion where he sees refinements, the politician where he sees power, and the unreflecting of all nations see the world in the sphere bounded by their own interests. But when the Christian would see the world, he looks for one thing,—hearts, human hearts! These are the world to him, these are the seat of conflicts like to his own, these the field on which are decided the issues of eternity, on which is battled the cause of his God. Asia is the largest assemblage of human hearts: thither, then, should the human heart most affectionately turn. The darkness of Asia glooms more hearts than that of all the world beside, and its sunrise will gladden more. While Asia is alien from Christ, more than half the world is far away; but when Asia shall be brought nigh, it will indeed be the fulness of the Gentiles. Asia is Satan's stronghold, and wide and proud is the empire over which he boasts. The lessons of the past, the movements of the present, and the indications of the future, all unite in pointing us, for the key of Asia, to Hindustan. Let it be won to Christ, and it will win the tribes surrounding. And, wonderful Providence! the whole of that vast land from the Himâlaya to Cape Comorin, and from the Indus to the Brumhapootra, is open to Christianity! Head of God's ransomed church! why hast thou placed before thy people this yawning door, through which we hear, coming from the valley and shadow of death, the wail of so many souls?

What then is India? The region which of all upon earth has most affected the history and the habits of every other; the region to whose influence are traceable the most striking characteristics of ancient civilization, the most notable feats of modern enterprise; the region whence sprang the creeds that even now command the largest number of souls; the region that offers the best medium for transmitting moral influences throughout Asia; the region that embraces in her arms a host of human hearts, comprising at least one out of every six that beat, and, holding them up to the eye of Christian pity, tells her they are all open to her approach, and susceptible of her action.

Oh that God would give his church a heart large enough to feel the sublimity of this call! Think, Christians, think on the state of the world. Dream not of the gospel as already known everywhere. Feel, oh feel, when you pray, that one half of your brethren never heard of your Redeemer! Bone are they of your bone, flesh of your flesh, conflicting, sighing, bending to the grave, like you; but crown for their conflicts, comforter in their sighs, hope in their grave, they see none. Think of every land where Satan has his seat, and give to them all a part in your prayer. But oh think long on the land where the throne, whose sway you love, has heathen subjects outnumbering sevenfold the Christians of the British isles! Think long, long on the fact, "I belong to an empire where seven to one name not the Name that is life to me!" Think that yonder, under the rule of your own queen, a full sixth of Adam's children dwell! take a little leisure, and say, "Of every six infants, one first sees the light there:

To what instruction is it born? Of every six brides one offers her vows there: To what affection is she destined? Of every six families one spreads its table there: What loves unite their circle? Of every six widows one is lamenting there: What consolations will soothe her? Of every six orphan girls one is wandering there: What charities will protect her? Of every six wounded consciences one is trembling there: What balm, what physician, does it know? Of every six men that die, one is departing there: What shore is in his eye?"

CHAPTER VIII.

INDIA: ITS PEOPLE.

Person and Address—Gifts and Justice—Lofty Titles—Bare Walls—Large Families—Seclusion—How to Eat—Grace after Meat—Animal Food—Temperance—Table Delights—Simple Furniture—Treatment of Women—The Wife's God—How to treat a Wife—Female Ignorance—Female Employments—Has Woman a Soul?—A Domestic Evil—Brighter Prospects—Domestic Occurrences—Prayer to the Dead—Parental Obedience—Honours of Marriage—Qualifications of a Wife—Marriage Months—A short Pilgrimage—Marriage Ceremonies—Early Marriages—Hindu Widows—Funeral Ceremonies—Villages and Towns—Village Government—Revenues—Despotic Governments—Caste—Old Houses—Caste Duties—The Bramhans—Bramhanical Dignity—Bramhan Attainments—Poetry—Lucky Days—Ignorance—Absurd Notions—A pitiable Country—A Fable—What England is—Mental Condition—The King Caste—Arrian and Ferishta—Hindu Bravery—Sepoy Courage—Merchants' Caste—Commerce—Shudras—Agricultural Usages—Irrigation—Cattle keeping—Art of Clothing—Building—Mechanics—Fine Arts—Loss of Caste—Pariahs—Out-castes—Misery—Ameliorations—The Lumbardi—Savages—Mountain Clans—Morality—Truth—Honesty—Robbers—The Thugs—Hindu Benevolence—Cruelty—Apathy—Temper—Different Opinions—Civilization—Practical Use.

In thinking of the people of India, you must dismiss the ideas of jet-black skin, thick lips, flat nose, and woolly hair, which we too readily associate with all natives of the tropics. None of these belong to the Hindu; he bears not the African, but the Caucasian type. Keep him before your mind as he was described in our chapter on Madras,—a man about the middle size, of slender person and graceful carriage, with good

features, a soft black eye, a mild expression, and a complexion varying from straw-colour to a deep dusky brown, almost black. Instead of the stiff black cylinder that surmounts the European head, he has a muslin turban of bright colours and graceful folds; for shirt, vest, and coat, he has a simple frock-coat of white calico, or, in country districts, a long piece of the same cloth, which he folds so as to cover, at pleasure, a greater or less part of the person; for trousers he substitutes a flowing robe of calico. The female has no other head-dress than her long, black, glossy hair; and for all other garment, a single robe and a simple bodice.

When a Hindu honours you with a visit, he leaves his shoes at some distance from the door, and enters barefooted, for stockings he has none; but he wears his turban: for it would be as disrespectful to appear before you with his head bare as with his feet covered. Thus, his politeness and yours are directly opposed. He approaches with an air at once self-possessed and respectful, and, bowing low, lifts his hand in a graceful sweep, till the fingers touch the front of the turban, saying, at the same time, *Salaam aya*, or *Salaam sahib*, according to the language he may employ. Should your rank, or his circumstances, incline him to still humbler obeisance, the head is more profoundly bowed, and the turban touched with both hands. In this case, a difference is obvious between those who adopt the "double salaam" of the Mussulmans, and those who retain the Hindu *namaskara*. In the former case the hands are brought to the forehead open, as in a salutation; in the other, they are laid together, and raised as

in the attitude of prayer. This latter salute, when offered by the poor, is painfully abject; but even that does not always suffice for their profound politeness. I have seen a man of six feet high bow slowly down till his forehead touched the floor, leaving you astounded equally at his humility and his suppleness. If he come to pay you a formal visit, he is required by etiquette to bring some present, as all well know who have had patience to read the narrative of the visits and return-visits of Lord Valentia. The gifts presented in ordinary politeness are very simple; a few limes, plantains, oranges, or pineapples: but if the visitor have an important favour to demand, or is approaching a dignified personage, the present is valuable, and sometimes magnificent. The judges in native courts were generally favoured with a call from the suitors on both sides of every weighty cause, before the hearing came on; and all were supposed to learn from the judgment delivered which had been the more liberal. The same politeness was plentifully accorded to those of our own countrymen who first undertook the administration of justice; but the government at length felt that such habits were incompatible with purity, and therefore wisely forbade their servants to receive presents of value. Though the natives are aware that this regulation was made for their benefit, they hardly know how to be pleased with it, for it grievously interferes with immemorial usage. To be led before a judge whom you have not conciliated with a handsome present, is for them a rude, point-blank way of going to law. I was told of a case in which the rule was ingeniously evaded, by presenting the lady of a judge with some fruit on a richly-wrought

silver dish, shaped like a leaf, and then refusing to receive back "the leaf on which the fruit lay."

A Hindu visitor is of easy manners and fluent conversation: a propriety and deference the most flattering mark his address. If he asks you where you are going, his politeness couches the question thus: "What place are you going to favour?" If he desires you to tell him anything, he says, "Give your command;" if himself desirous of making an observation, he says, "I will make my petition;" and thus in various ways he insinuates a delicate politeness into common-place remarks. If he be little acquainted with Europeans, and at the same time looking for a favour, he will greet you with titles the most sonorous, and overlay you with compliments the most resplendent. To be called *Maha Rajah*, "a great king," is a common matter; while "Prince of the earth," "Lord of the four worlds," and "Lord of the fourteen worlds," are titles at which my unaccustomed ears have often laughed, when the countenance dare not for shame keep them company. The lower classes frequently address you as *Swami*, "God;" and the lowest as *Dayvaru*, a still more sacred appellation of Deity. One day a fine young man came up to me, and, after the most profound salaams, opened with a swell and pomp of adulation that might have proclaimed him captain-general of compliments: "Great king, governor of the earth, lord of the fourteen worlds, your fame is universally diffused. I have heard it at Bellary, and am come thence" (a distance of two hundred miles) "just to make the vision of your countenance." "Indeed," rejoined I, trying to preserve a sober face; "I was not aware that I had done anything

to spread my fame as far as Bellary: may I ask what it is for which I am so celebrated?" With perfect coolness and complacency he replied, "You are the ruler of the country, and the benefactor of the people. You are making roads, and building bridges, and digging wells, and constructing tanks, and planting groves, and, in fact, doing everything munificent." "Really," said I, with all gravity, "I was not aware that I was performing such great works: would you have the goodness to tell me where one could find the roads I have made, the bridges I have built, and the groves, tanks, and wells of which you speak?" He looked puzzled; for he had never imagined that any one would be so dull as to treat those magnificent flights of oratory in a vulgar, matter-of-fact way; he meaning by his expressions nothing at all, but that he wished to be understood as intending all the civilities under the sun. After a second of embarrassment, he recovered his self-possession, and said, "Why, your people" (the English) "are doing all this, and that is just the same thing!" The whole of this display was only to introduce a request that I would interest myself to procure him a situation. These excesses of flattery are not found among natives who have had much intercourse with Europeans; their compliments are often really delicate; and even the lowest of the people, when assured by a frank and kindly bearing, soon lay aside their servility, and become frank and candid in their turn.

Having now glanced at the person and address of a Hindu, we shall look at his residence. This will not be correctly fancied, without some care to divest your mind

of European ideas. It is not a building of many stories and many windows, nor a red-brick cottage, nor a cottage with stone walls and slated roof, nor with leaded windows and thatch. Though the Hindus have long known glass, they have not learned to employ it for the purpose of introducing broad day within thick walls, and of happily uniting shade and sun. Set, then, before your eye a small cabin, seven or eight feet high, without a single window; the walls whitewashed, at the base a broad stripe of red or brown, with a flat roof, or perhaps a sloping one, of tiles. If the owner be poor, the house contains two apartments; if rich, it forms a small quadrangle, open in the centre to the sky, with apartments lying on each side of the square opening. Entering this house, you find no boarded floor, no papered walls, no chairs, no tables, no mantel-pieces, no grates, no delf or china-ware, no mirrors, no hangings, no time-pieces, no book-shelves, no toilet-tables, and (except among the great) no carpets or bedsteads. In the nations of the north, a modest substitute for the latter might be found. In fact, all your ideas of a home are at fault. You have bare walls and a bare floor; you are among a people to whom a house is nothing more then a cover from the weather and the public gaze. A severe climate, rendering more than mere shelter essential to ease, multiplies the household inventory; and domestic happiness prompts us to adorn the scene of the most select enjoyment. From these two causes have sprung the endless comforts of an English home: but the Hindu has not felt either of them; his native breezes are ever mild, his family relations ever chill; and thus, while the gifts of his clime and the works of his hand have been en-

riching distant homes, he has continued to dwell within the same earthen walls, to sleep on the same earthen floor, and to employ only the same apparatus of brasen pots which served his fathers three thousand years ago. Difference of wealth or rank causes little change in the character of the dwelling: the same simplicity exists until you go as high in society as a petty rajah. It must, however, be distinctly borne in mind, that this statement, and those of this chapter generally, do not include that small fraction of the people who, inhabiting large cities, have learned in many things to imitate the English, and of whose mongrel habits some authors speak, as if they were those of the Hindus at large.

The Hindu families are often very numerous. Several sons may be married, and each have children, yet, while the father lives, it is not unusual for them all to continue under his roof, and subject to his authority. Generally they do not receive any separate provision until after his death; and even then they sometimes continue to reside together, the elder brother succeeding to the father's power, and to a large extent holding the capital of the others in his hands. The mother-in-law is supreme over the females, and strangely deems it part of her duty to prevent great tenderness between her sons and their wives,—an obligation in the discharge of which she often wounds so deeply the feelings of the daughter-in-law, that the latter betakes herself to her father's roof, and will not return till after negotiations and apologies. Not even caste itself more tends to compact Hindu society than this family system; for a man may arrive at middle age, or more, before he has a house of his own; his wife and children are liable to be taken

from him in any dispute which would alienate himself from the family circle. Not a few, when they contemplate embracing Christianity, are menaced by this trial, in addition to others. All the people freely claim the right of home in the house of a relation. If a man be in flourishing circumstances, his brothers, uncles, cousins, and other near kin, will live upon him without scruple, nor concern themselves to obtain an independent livelihood, so long as he retains his means; and I believe the case is rare in which their claim, however unreasonable, is rejected.

The private scenes of Hindu life are covered from all but members of the same caste; and, as Europeans do not belong to any of the castes, all family circles are closed against them. A European may live for years in a town, and on the most friendly terms with the people; but he is debarred their homes. For the most part he never enters the door; and if he do, it is only to a conversation in the outer apartment with the males of the family, or to some great entertainment, with nothing domestic in its character; and this, instead of showing him their family life, only shows how far they can succeed, upon an occasion, in laying out a table in English style. True, they manage, by garlands, scents, and dancing-girls, to give the matter a native air; but though this enables travellers of a certain class to talk of entertainments at the houses of natives, to one really desirous of studying their inner life, it only gives painful evidence of the care with which it is covered from his view.

Much knowledge, however, is gained by daily intercourse with them, and careful observation of their allu-

sions to in-door acts. The number of their meals is usually two. The first duty of the morning is, for the females to proceed to the well to draw water. And as the men may not partake of the morning meal before they have performed their ablutions, they go to the tank, bathe leisurely, wash their clothes, put carefully on their foreheads the marks of their sect, and repeat forms of prayer. In these duties the Brahmans are specially strict; and the Shudras almost totally negligent. These ceremonies, and others of a religious character, performed at home, being terminated, the first meal is taken, about ten o'clock: the second, which is also preceded by ablutions, is taken about sunset.

"He who eats," says the Vishnu Purâna, "without performing ablutions, is fed in hell with filth; and he who repeats not his prayers, with matter and blood . . . . . Let the householder, having bathed, and offered libations to the gods and manes, and decorated his hands with jewels, proceed to take his meal . . . . . He must not eat with a single garment on, nor with wet hands and feet, but dressed in clean clothes, perfumed, and wearing garlands of flowers: he must not eat with his face to any intermediate point of the horizon, but fronting the east or the north: and thus with a smiling countenance, happy and attentive, let him partake of food of good quality, wholesome, boiled with clean water, procured from no vile person nor by improper means, nor improperly cooked . . . . . The man who commences his meal with fluids, then partakes of solid food, and finishes with fluids again, will ever be strong and healthy. In this manner let him feed without fault, silent and contented with his food; taking, with-

out uttering a word, to the extent of five handfuls, for the nutriment of the vital principle. Having eaten sufficiently, the householder is then to rinse his mouth, with his face turned towards the east or the north, and having again sipped water, he is to wash his hands from the wrist downwards. With a pleased and tranquil spirit, he is then to take a seat, and call to memory his tutelary deity; and then he is thus to pray: 'May fire, excited by air, convert this food into the earthly elements of this frame, and in the space afforded by the ethereal atmosphere cause it to digest, and yield me satisfaction! May this food, in its assimilation, contribute to the vigour of the earth, water, fire, and air of my body, and afford unmixed gratification! May Agasti, Agni, and submarine fire, effect the digestion of the food of which I have eaten; may they grant me the happiness which its conversion into nutriment engenders; and may health ever animate my form! May Vishnu, who is the chief principle of all invested with the bodily structure and the organs of sense, be propitiated by my faith in him, and influence the assimilation of the invigorating food which I have eaten! For verily Vishnu is the eater, and the food, and the nutriment; and through this belief, may that which I have eaten be digested!'"

The Bramhans, the Linga worshippers, and large sections of the other castes, do not touch animal food; and the statements made by Montgomery Martin and others, respecting beef-steaks at Bramhan's tables, and similar things, can be received only as proof that, in the centres of English influence, a few individuals begin to despise the sacred laws of their caste; for it must

not be for a moment supposed that such offenders are other than the rarest, and, to the people at large, the most disgusting, exceptions. Of the many millions who compose those castes, not one, from birth to death, tastes anything that has lived, fish included, and even eggs. They loathe all animal food, as we do human flesh; and they profess to know a flesh-eater by his scent. In some of the northern countries, where caste-laws are in general less stringently maintained than in the south, many of the Bramhans eat fish, calling it a sea-vegetable. Even those castes who allow animal food, never let beef cross their lips; that enormity is left to the out-castes alone; nor do they kill the cow in order to obtain it, but only take the carcases of such as have died. The staple food of the Hindus varies with the climate of their different countries: rice, Indian corn, raagi, and some other grains, are each, in different places, the staff of life. Milk, in its various preparations, is an essential article of food; curds are highly esteemed; but clarified butter in a liquid state elicits their most dilated praise. It is called *ghee*, and affirmed to be quite as much in favour among the gods as among mortals. As corpulency is indicative of respectability, (for all poor men are thin,) and as *ghee* is supposed to assist in obtaining it, those who can afford to indulge their vanity use it in large quantities, and sometimes drink it pure. With their food they freely use spices, which, mixed and pounded, form currie, the delicious accompaniment of their boiled rice or other food. This currie, as eaten by the natives, is frequently so hot, that no European palate, except one long accustomed to it, could bear more than a few spoonfuls. Our countrymen

universally eat and highly prize it, but in milder forms. It must be remembered that spices are the only stimulants of the natives at meals; for even those who do allow themselves to taste exciting drinks never make them a beverage at table, if we may speak of a table where none exists. A currie generally contains ginger, limes, onions, salt, coriander-seed, cloves, pepper, (red, and perhaps black,) turmeric, citron, saffron, and garlic; with cocoa-nut milk, tamarinds, and other ingredients: these are mixed with vegetables fried in *ghee*, and form a condiment capable of being varied in endless ways, and in all its varieties pleasing.*

Temperance is the most striking virtue of the Hindus. The laws both of the Bramhans and the Linga worshippers proscribe all drinks that inebriate; and the use of these is confined to the lowest orders, except in rare and monstrous exceptions. Among respectable persons drunkenness is held in the utmost detestation; and in their eyes Europeans have been more degraded by intemperance than by all other causes combined; because in this vice they were obviously below themselves. Such is their horror of spirituous liquors, that when in fear of cholera, and willing to accept medicine prepared by Europeans, I have known them to declare they would not touch it, unless satisfied of its freedom from brandy. Several divisions of the Shudra caste use toddy and arrack, and so do all the out-castes; but even these latter, though more infected with the vice than any other class, are not universally chargeable with drunken-

* Those who are curious on Hindu cookery will find a tract on that subject in the "Miscellaneous Translations" of the Oriental Translation Fund.

ness. I doubt, indeed, whether any class of the people can, as a class, be called drunkards, unless it be in some large cities where they have long had our example. In the matter of temperance, both Hindu and Mohammedan, with pride and derision, boast their superiority to the Christian! Nor is our shame lessened by alleging numerous defections among these two classes, when it is sadly manifest that such apostacies are often due to our presence.

Toddy is the juice of the palm. In every palm-grove you see trees with small pots attached to them in different places: these are affixed to an aperture caused by boring, and receive the exuded juice. They are changed every morning; and the liquid, when fresh, is said to be delicious, and not intoxicating; but it is seldom drunk till after fermentation. Arrack is a strong spirit, distilled from rice, and also from several other substances. The vendor of these drinks ranks amongst the most disreputable professions.

Their temperance is not equally commendable in food as in drink. Though many avoid animal food, such abstinence does not necessarily imply moderation. Taking but two meals a day, they sit down with a sharp appetite; and when they rise, their lightly-covered person displays the effects of the repast. A Bramhan, on seeing me return to my study after dinner, looked at me, and said, "What is the use of your going to dinner? You come back just as you went away." I assured him that my visit to the table was of very essential utility. "But," said he, patting his person, as they always do on any allusion to gastric operations, "one cannot see that dinner makes the least alteration in your appearance:

you are just as you were before!" A native after dinner bears symptoms as plain as a colt coming from a field of clover. Of cooks and epicures the Bramhans claim to be the first-born. It is their birthright, as gods of the earth, especially to enjoy the fruits of their domain. When perfectly at home, and set upon the theme, they descant with luscious eloquence on their peerless skill in dressing and enjoying food. They boast much of their ability to fast; and when in another humour, boast as loudly, though less haughtily, of their ability to feast. They will smile, and quote the *Shlokâ*:—

> "Dear to Vishnu is veneration;
> Holy unction is dear to Shiva;
> To the Sun adornments are dear,
> And to the Bramhan food."

They tell of most extravagant *gourmand* feasts by members of their own fraternity. "Oh," said a panting Bramhan, after an entertainment, "I am choking with thirst." "Why not take a little water?" asked a friend. "Bah! you simpleton; don't you think, if I had room for water, I would have taken another sweetmeat?" I do not mean to charge the people generally with gluttony, though they misrepresent themselves if they are not easily tempted to eat to excess; and I should have regarded the above statements respecting the Bramhans as slanderous, had they not come from themselves,

The service of a Hindu meal is primitive as can be. In Europe, we summon all nature and all art to wait upon us at dinner, and to do us honour. The forest yields its costly woods; the mine its steel, silver, copper and tin; the field its fine linen; the hard flint appears

in delicate procelain; the tusk of the elephant presents our cutlery in smooth cases; and the sand of the sea comes in crystal goblets to moisten our lips. Then, how turner and joiner, weaver and miner, cutler and silversmith, potter and glass-worker, have shown their skill! But none of this elaboration is known in India. A good man just sits down upon the floor; a few leaves sewn together contain his food; and with his own fingers he conveys it to his mouth, as satisfactorily as if all Sheffield had been at his service. When the repast is over the leaf-plate is thrown away, and another provided as the next meal is preparing.

But the simplicity of a Hindu meal is not more striking than its loneliness. In all the length and breadth of vast Hindustan, a family-board is not known! We look on that simple thing, a family-board, as an indifferent, almost an unavoidable, accident of family life; but go to India, and you have it not. Let all the homes of that wide continent open to your eye to-day, and in every one you see a man sitting down alone, eating in silence; his wife serving, then taking away the food, and silently eating in a separate apartment. You may then exclaim, "Is it possible that even my family-board is another of the boons for which I am indebted to the gospel?"

The furniture of a Hindu home is not more inferior in comfort to that of an English one, than are its domestic relations in joy. There the heart is ruled by another code than that which warms our hearths. Amongst all the unaccountable things said about India in Europe, perhaps, considering the character and opportunities of Sir Thomas Munro, the most unaccountable is that

which he said before a committee of the House of Commons, in 1813, respecting the domestic character of the Hindus:—"A treatment of the female sex full of confidence, respect, and delicacy." What that most respectable man could mean by these words, I cannot even conjecture; unless that, having lived in India from boyhood, he, in his laudable attachment to the natives, —an attachment to which they gave a merited return,— had learned to appreciate the Hindu treatment of females, not by the just standard of Christianity, which he had seen applied in Scotland when a boy, but by the detestable oppression of Mohammedanism, which had been under his notice throughout his active life. The Hindu woman is not, like her more unhappy Mohammedan neighbour, doomed to perpetual prison: she is privileged like other animals to see the sky, and to breathe the free air. On this, therefore, may she congratulate herself; but in view of the rights given her of God she has much ground to complain. Her husband is taught in the popular *Punchatuntara*, that one essential quality of a geat man is severity to women. Wickedness, deceit, impurity, and baseness, are pronounced inseparable from her nature! "Let the wife," says the *Skanda Purâna*, quoted by Dr. Wilson, "who wishes to perform sacred ablution, wash the feet of her lord, and drink the water; for a husband is to a wife greater than Shankara or Vishnu. The husband is her god, and guru, and religion, and its services; wherefore, abandoning everything else, she ought chiefly to worship her husband." From the *Padma Purâna*, Dubois cites the following and similar passages:—"Let him" (the husband) "be choleric and dissipated, irre-

gular, a drunkard, a gambler, a debauchee; suppose him reckless of domestic affairs,—even agitated like a demon; let him live in the world destitute of honour; let him be deaf or blind; his crimes and his infirmities may weigh him down; but never shall his wife regard him but as her god. . . . . In every stage of life a woman is created to obey. At first she yields obedience to her father and mother. When married, she submits to her husband, and her father and mother-in-law. In old age she must be ruled by her children. . . . . When in the presence of her husband, a woman must not look on one side or the other. She must keep her eyes on her master, to be ready to receive his commands. . . . . Her husband may sometimes be in a passion; he may threaten her; he may use imperious language; nay, he may unjustly beat her; but under no circumstances shall she make any return but meek and soothing words." These startling extracts show the principles inculcated upon Hindu husbands by the most venerable authorities; but one would suppose that they would make nature revolt, and thus prove their own antidote. I often questioned men on this subject; and, amongst those who were *unaware of the way in which Christians feel*, invariably found concurrence in the abominable sentiments of the Shastras. A respectable man said, in reply to such interrogations, "The most fatal error one can commit is to treat his wife affectionately. From the day he exhibits tenderness towards her, his independence and his peace are gone. She will dread him no longer; all the vices of her nature will break forth; his home is no more his own; and he must bear with her tongue and her temper all his days. If," added

he,—and I shall never forget the words,—"if you bear affection to a parent, a brother, a child, or even a servant, you may display it; but if you love your wife, you must never allow her to suspect that it is so; or farewell to peace!"

This calamitous sentiment could never be carried into practice where marriage is a voluntary contract between persons of mature age. But in India the bride is probably not older than five or seven: she may be as young as three. She most likely has never seen her lord before the wedding-day, and possibly may see him no more for years. Affection, on the one part or the other, has no place in originating the union; and that, to any tender extent, it should arise out of it, at least on the part of the husband, he is taught to regard as weak and unseemly. No wonder Dubois should have ground to say, "During the long period of my observance of them and their habits, I am not sure that I saw two Hindu marriages that closely united the hearts by a true and inviolable attachment."

A family of cold hearts and chill intercourse is always an unwelcome scene. But how sad is it to review the homes of an entire continent, and see every husband, like an irrational animal, eating silent and lonely; and every wife humbly attending at the beck of her lord! So it is in India. Perhaps only a week ago that couple became united for life: no matter, this great gulf lies between them. Perhaps they have spent half a century in union: no matter, the ice that parts them yields not either before the ardour of youth, or the mellowness of age. "What woman would think of eating till her lord had had his fill?" asks the author of the *Padma*

Purâna; and the same authority graciously adds, "When he" (the husband) "goes abroad, if he bids her go with him, she shall *follow*." And follow she does; but accompany, never. The woman who would dare to walk side by side with her lord, would be thought as much out of her place as a fishwoman at a royal drawing-room; and the man who would allow his wife to take his arm, would be universally scouted as a weakling. No, no; she must "follow," and that at a respectful distance. The same vehicle on which the dignified person of her master is borne is forbidden to her, except in case of a very long journey, when necessity conquers pride.

Another striking feature of domestic life is the denial of education to females. Except the hapless girls destined to the profession of temple-women, no female is permitted to learn to read or write. Needlework, also, is out of the question; for their own dresses, except where they adopt a very small bodice, are without seam, or hook, or button, or pin, or other imaginable fastening or joining; being formed, as already stated, of one long piece of silk or muslin cloth. The same is the case with the dresses of all children, and also of the men, except those who wear the frock-coat, which, though apparently of modern introduction, is now very general. Besides, to sew would be to adopt the profession of a tailor; to embroider a piece of muslin would seem, to a Hindu lady, as much out of her province as, to an English one, would driving a waggon. Of musical instruments, or other accomplishments, they know nothing. Then the Hindu housewife has no furniture to keep in order, and the washing falls of right

to professional hands. Thus they are left without any pastime, or any employment, save only the spinning-wheel. I have sometimes asked, "How do your women employ themselves during the length of the day?" —"Dress their hair, and sleep, and talk nonsense." And, with the exception of cooking two simple meals, waiting upon her husband, and occasionally spinning, the occupations of respectable Hindu females are described in the dull summary, "to dress her hair, to sleep, and to talk nonsense." The wives of persons eminent in rank are, of course, relieved from culinary duties; but I believe none of them despise wholly the exercise of the spinning-wheel. Among the labouring classes, the women assist the men; and from the statements of many credible writers, we must believe that, in several Indian countries, they endure an oppressive share of the toil; but, from my own observations, I should say, that in the Mysore they have scarcely a larger proportion than falls to women of the same class at home. That which struck me as the greatest severity, was, that when families travel, you have the father walking light and free, with the wife behind, carrying a child slung upon her back, and their household goods in a bundle on her head.

It is frequently stated, that the men, to account for and justify the denial of instruction to women, pronounce them to be destitute of soul and incapable of learning. This statement must be erroneous; for Hinduism, so far from considering woman destitute of a soul, teaches that a soul is possessed by all living things; and the rewards of paradise ever invite woman to her husband's funeral pile. For my own part, I never once heard this reason

assigned. On the contrary, they usually spoke of women as gifted with much quickness and strength of intellect; so that, if only permitted to overhear the discussions of the learned, they rapidly gained knowledge. With me, they advocated the non-education of women, not on the ground of mental feebleness, but of moral perversity. Woman is, according to them, a compound of all the vices. The following passage, cited by Mill, accurately expresses (notwithstanding the remarks of Professor Wilson) the estimate of woman generally given by the natives in familiar conversation:—"Infidelity, violence, deceit, envy, extreme avariciousness, a total want of good qualities, with impurity, are the innate faults of womankind." "To teach a woman," they have said to me, "would be to give a serpent milk; she would turn her knowledge into venom." And, again: "Keep our women at what distance we may, it is hard to govern them; but did we make them our equals, by teaching them to read and write, farewell to the hope of ruling our homes!" Even the gentlemen at the court of Ahasuerus were not more jealous than the meanest Hindu of the right of men to "bear rule in their own house." They also profess great alarm for the moral consequences of female education, asking,—"If it be almost impossible in the present state of things to preserve a family from intrigues, how would it be if the women could send and receive notes?" In addition to all this, the connexion that has long existed between an educated and a disreputable woman enlists the prejudices even of the females themselves against their own elevation.

The coolness with which our writers usually handle

this subject is astounding. They treat it rather as a curious peculiarity of Hindu society, than as a bold wickedness, and an execrable deduction from the lawful sum of human happiness. There is an animal philanthropy, never awakening but at the cry of oppression, or the lash of the slave-whip; there is an intellectual philanthrophy, moved to see a mind groping in the caverns of an unknown universe; and, more noble and more tender still, there is a spiritual philanthropy, which kindles to find a soul wandering through shades and pollutions to a hapless end. The first, as the most gross, is the most common; we need only the instinct of the gregarious animals to echo the cry of a smitten man. But the darkness that bewilders an intellect is a heavier evil than the chain that binds a limb; and the sin that dyes a soul ought to make us shudder more than the blood that stains a brow. The public would be moved by a tale of a thousand women driven in captivity across a desert, or barbarously flogged, more than by the statement that all the women of India, numbering a hundred millions, are, from generation to generation, doomed to perfect intellectual darkness, to perfect spiritual delusion. Yet this latter is ten thousand thousand times a greater calamity to the human race. The eyes that weep will soon be closed; the limbs that toil will soon rest; the frames that bleed will soon moulder; and as they pass to their repose, they do not unavoidably bequeath their agonies. But the mind that errs never ceases to think, and, from generation to generation, the follies it left upon earth are preserved and made fruitful; the soul that sins never ceases to feel; and from generation to generation, the stains it bore are

handed down. Oh, if we had fully the spirit of that religion which repugns every wrong, and takes part with every sufferer, we should confront, with a wrath that could neither be appeased nor mitigated, the system that parts humanity into two different natures; that makes the sister her brother's inferior, the wife her husband's slave; that shuts up myriads of intellects from all culture; that dooms families to despotism; and that sweeps from many nations a domestic board. We cannot too often repeat, nor too deeply ponder, the fact, that, though India is so wide, none of its homes knows a family circle. Desolate England, to-morrow, of her household boards, and not a son of England would care to remain on her shores. Her fields might smile, and her streets glitter; but her heart would then be cold. Our first fear of God, our warmest throbs of patriotism, our morning rays of knowledge, our gentlest emotions of benevolence, and the most softening culture our hearts ever receive, are all due to that glorious creation of the gospel, a happy home. Few children of Christianity duly estimate the boon she gave to human society, when she said: "Likewise, ye husbands, dwell with them according to knowledge, giving honour to the wife as unto the weaker vessel, and as being heirs together of the grace of life." Who that has any relish for human bliss—that catches any peace from a home of love, any joy from a merry child,—that has one tender remembrance of motherly teaching or sisterly attachment, does not raise his heart to Him, in whom are to be blessed all the *families* of the earth, and vow to spread afar the knowledge of His name?

It is well and timely that some English ladies have

thought upon their sisters in the East, and have devoted, to their elevation, the intelligence and influence put by Christianity into their own hands. They have already effected much; their opportunities are growing; and the interests of humanity in Asia loudly demand that they should be enabled, by increased support, to keep pace with the increase of facilities. That increase will be rapid; for, the usage of ages once violated, and the prejudice of ages once confronted, right will assert its claims, and wisdom enforce its lessons.*

Being now in the family, we may notice the chief "domestic occurrences." A birth, if it be that of a son, is hailed with unbounded pride and joy. "By a son,"

* I allude, of course, to the Society for Promoting Female Education in the East, which has existed thirteen years, and sent out nearly sixty agents. Incorrect statements have been published as to the number of those agents who have honourably fulfilled their term of service. So far from being only a fraction of the whole, those who have failed are but a fraction; and even of them the greater part, having married missionaries, continued as much to promote female education, after their nominal removal from the service of the society, as before. Last year, (1846,) twenty-one of their agents were actually at their post, of whom one had served for eleven years, two for eight, two for seven, five for five, and all but five for above three years. This completely disproves the statement, that these ladies invariably embrace the earliest opportunity of settling in life. Then, it ought to be stated, that the society does not restrict its aid to schools conducted by its own agents, but readily helps all plans of female improvement, conducted by *any Christian person*, and in connexion with *any evangelical church*. I knew of an application made on behalf of a school at Bangalore, the lady conducting which had no connexion with the society; and a liberal grant was instantly accorded. The sphere of the society embraces Western and Southern Africa, the Levant, India, and the Eastern Archipelago. Their income is only some £1,500 per annum; a sum wholly unworthy of their object, and inadequate to their opportunities. All religious bodies are interested in their success; for all are impartially aided from their funds.

says Menu, "a man obtains victory over all people; by a son's son he enjoys immortality; and afterwards by a son of that grandson, he reaches the solar abode." These prodigious benefits from male offspring are owing to the fact, that they only can duly sacrifice to the ancestral manes; a rite so essential, that if one be not able to present to the Bramhans on behalf of his ancestors "land, conveyances, wealth, or any valuable presents," not even "food," or "unboiled grain," or "sesamum seeds," rather than not sacrifice at all, "he must go to a forest, and lift up his arms to the sun and other regents of the spheres, and say aloud,—'I have no money, nor property, nor grain, nor anything whatever fit for an ancestral offering. Bowing, therefore, to my ancestors, I hope the progenitors will be satisfied with these arms tossed up in the air in devotion.'" If, however, his lot be more propitious, the sacrifice actually accomplished is attended with this prayer: "May my father, grandfather, and great-grandfather, in the persons of these Bramhans, receive satisfaction! May my father, grandfather, and great grandfather derive nutriment from these oblations to fire! May my father, grandfather, and great grandfather derive satisfaction from the balls of food placed by me upon the ground! . . . . . May my maternal grandfather, his father, and his father also enjoy contentment from my offerings! May all the gods experience gratification and all evil being perish!" (*Vishnu Purána.*) It is easy, from this, to comprehend how the failure of male offspring is looked upon as a curse from the gods, and how a son is a crown of joy. The birth of a daughter causes no pæans; but it is better than a want of issue; and some

fathers have told me, *sub rosâ*, that they even preferred daughters, because they produce something when sold to a husband, whereas it is expensive to buy wives for sons. A name for the new-born child is selected carefully out of what the Abbé Dubois rather naïvely calls "the calendar of their saints;" and when the child is twelve* days old, the relatives assemble, when the father, taking a plate of rice, marks upon it the intended name, and, after some ceremonies, calls the child by it three times.

Children are taught blind submission to parental will: just as a wife, at the bidding of her lord, does right in committing the greatest sins, even to violation of her vows; so the son, at the bidding of his father, must do any deed whatever, without once suspecting it to be wrong; and should he even see his father commit murder, he must not judge it a sin. Except in cases where religious rites—as for instance, suttee—violate nature, I do not think that a lack of filial regard is generally chargeable on the Hindus: high authorities have given a different opinion; but my own observation leads me to distrust the accuracy of theirs. Contempt of either parent is held to be a frightful crime; and affection for the mother seems deep and universal. It has been quoted to me as a maxim, that the grief of a father (occasioned by the death of a father) lasts six

* The *Vishnu Purâna* says,—"Ten days after the birth, let the father give a name to his child, the first term of which shall be the appellation of a god, the second of a man. . . . . A name should not be devoid of meaning; it should not be indecent, nor absurd, nor ill-omened, nor fearful; it should consist of an even number of syllables; it should not be too long, nor too short, nor too full of long vowels, but contain a due proportion of short vowels, and be easily articulated."

months; the grief of a son a year; that of a wife, till a second marriage; and that of a mother, till death.

Marriage is a high honour, a signal virtue, and a religious duty. No parent can perpetrate a greater crime than to allow a daughter to gain maturity without having endeavoured his very utmost to procure her a husband. The same obligation rests upon him to present each of his sons with a wife. When a boy has reached seven, and a girl three, parental anxiety becomes wakeful for their settlement. The festivities of marriage are tedious and costly: presents must be liberally distributed, and the bride must be bought with a sum proportioned to the wealth of the family. This usage of selling wives has not the sanction of the Shastras, and perhaps is not practised in all the nations of India; but I believe it is universal in the south, except among the Nairs, where one wife has a plurality of husbands.* The costliness of the marriage ceremony probably arose as a natural corrective to polygamy, and operates as an important check to that evil; for, though it is permitted by the Shastras, few men are found who have more than one wife, because few can afford the outlay of more than one wedding. The only consideration previous to a marriage is, how the sum necessary for the expenses can be raised. That obtained at any interest, or on any terms, no thought is given to other difficulties. To consummate the union is the one idea; and no one thinks of asking whether the young people have the prospect of providing for a family. Honour and happiness consist not in providing

* See Forbes's "Oriental Memoir." The same habit prevails among some of the Hill tribes of Northern India.

for a family, but in having one. On no account is celibacy permitted to a woman; and every single man is contemptible; for it is well known that he would not be so, were he not so destitute of credit that no one will lend him money, or so vile in reputation that no one will give him his daughter.* Honour and pocket-picking united in the same person, is not a conception more impossible to us, than is that of celibacy and virtue to them. "Are you married?" is one of their first questions to a missionary; and if he answer in the negative, they, unless familiar with our habits, judge him accordingly.

A father, having selected a girl for his son, sends an acquaintance to sound her father as to whether the alliance would be agreeable. If so, he goes in person, formally proposes, and offers his price for the bride. The directions given by the sage Aurva for the choice of a wife are sufficiently characteristic to merit quotation. "He must select a maiden who is a third of his age; one who has not too much hair, but is not without any; one who is not very black nor yellow-complexioned, and who is not from birth a cripple, or deformed. He must not marry a girl who is vicious, or unhealthy, of low origin, or labouring under disease; one who has been ill brought up, or who talks improperly, or who inherits some malady from father or mother; one who has a beard, or has a masculine appearance; one who speaks thick or thin, or who croaks like a raven; one who keeps her eyes shut, or has the eyes very prominent; or who has hairy legs, or thick

* Monks are, of course, an exception, celibacy being their vow.

ancles; or who has dimples in her cheek when she laughs. Let not a wise and prudent man marry a girl of such a description: nor let a considerate man wed a girl with a harsh skin, or with white nails, or with red eyes, or with very fat hands and feet; or who is a dwarf, or very tall; or whose eyebrows meet, or whose teeth are very far apart, and resemble tusks." He further prescribes that he select one who is "in kin five degrees remote from his mother, and seven from his father." Some native author, whose name I cannot recall, prescribes that the lady shall have a gait resembling that of a young elephant.

Preliminaries arranged, a day must be fixed. Properly speaking, this ought to be either in March, April, May, or June; for they only are lucky marriage months; but the other parts of the year are often ventured upon. In this case, however, the astrological observations, which decide the propitious day, have to be taken with such care, that much delay and anxiety are inevitable. The day at length fixed, the guests assemble at the house of the bride's father.* Outside the door is erected a portico with twelve wooden pillars. Under this is placed the hideous image of Vignayshvara, the god of difficulties, who, if not duly honoured, would assuredly cast some impediment before the hymeneal car. Here also the bride and bridegroom are seated, on a small mound of earth, with their faces to the east. The married women, bearing on a copper plate a lamp made of rice-paste, and lighted, then approach, and, holding this as high as the heads of the happy pair,

* In the succeeding details I closely follow Dubois.

make several circuits around them. This, called the sacrifice of *Alati*, averts the influence of an evil eye, and is a leading rite in all solemnities. After this, the whole three hundred and thirty millions of gods are earnestly invited to come to the wedding, and to stay throughout the five days during which it lasts; the ancestor gods are honoured with the same invitation, and are intreated to bring with them the still more distant progenitors. A sacrifice is then offered to Brumha, the creator. On the second day, the bridegroom makes large presents to the Bramhans in expiation of his faults. After this, he feigns a desire to make a pilgrimage to Benares, to wash in the sacred Gunga; he equips himself for a journey, takes a supply of provisions, and turning his face towards the holy city, takes his departure in the fashion of an actual pilgrim, preceded by musical instruments, and accompanied by friends. He has not proceeded far on his pious journey, which would probably be fifteen hundred miles long, before he is met by his intended father-in-law, who inquires where he is going, and, on being informed, offers, if he will return, to reward him with the hand of his beautiful daughter. The pilgrim is not obstinate; and on his rejoining the party, the ceremonies commence anew. With much pomp, a piece of saffron is tied round the wrists of the youthful pair. The bridegroom is then placed with his face to the east, and the father-in-law steadily contemplates him, till he fancies that in his countenance he sees the divine Vishnu, upon which he presents him with a sacrifice. Next he places him with both his feet in a dish filled with that very sacred substance, cow-dung, and then, uttering *muntras*,

washes his feet first with water, afterwards with milk, and again with water. This done, he profoundly meditates on the three hundred and thirty millions of gods unitedly, and invokes by name all whom he can recollect; after these, he invokes the seven *rishis*, "sages," the five virgins, the ancestor gods, the seven mountains, the woods, the seas, the eight cardinal points, the fourteen worlds, the year, the season, the month, the day, the minute,—praying them all to bless the marriage; then solemnly taking his daughter's hand, he places it, in sign of surrender, within that of the bridegroom, and pours water over them both. The young couple are now surrounded by a number of the attendants, reciting *muntras*, and invoking the gods and their wives. While this is proceeding, enters a salver neatly graced with flowers, and bearing a small golden ornament, with the image of a god engraved upon it, and having attached a cord composed of a hundred and eight extremely fine threads. To this ornament incense is offered, and each of the persons present touches it, invoking blessings upon it. The bride then turns to the east, and the bridegroom, taking the ornament thus consecrated, places it in front of her neck, and ties the cord behind. This is called the *tahli*, it is their wedding-ring; but, contrary to the usage with us, it is removed in case of widowhood. Fire is now introduced; on this the bridegroom offers a sacrifice; then taking the bride's hand, they walk thrice round it; thus ratifying their union by the witness of that element which they hold to be divine. When all the great ceremonies are concluded the attendants sprinkle with rice the heads of the newly-married pair. In some cases they

are placed each standing in a bamboo basket, and each is furnished with a vessel of pounded rice. The bridegroom pours the contents of his on the head of the bride, who returns the compliment; and this they several times repeat. The significance of this ceremony, as emblematic of plenty, is obvious. On the fourth day of the nuptials both bride and bridegroom eat off the same plate; and Dubois says, "Well may the woman now continue to eat what the husband leaves, and after he has done; for they will never again sit down to a meal together." The whole is closed by a torchlight procession, in which both are carried in a decorated palankeen; they are hailed by their neighbours with gifts and gratulations, while fireworks and music complete their honours. We may add that the wife may well enjoy this ride; for never again, except in case of a tedious journey, may she mount the same vehicle with her lord.

The girl thus pompously married is always of immature age, and, after the ceremony, remains in her father's house for a shorter or longer term, as the case may be. When deemed fit to be united to her husband, she is led to his residence, on which occasion ceremonies are renewed, but on a much smaller scale. Though we should hold the original ceremony only a betrothment, they hold it a marriage. From that moment the man has all the rights of a husband, the girl all the obligations of a wife; and should he die, though she may never have left her father's roof, she is his widow; and his widow all her days she must remain. The *tahli* is removed from her neck; then, one by one, her articles of jewellery; her dress changed for a

widow's robe, and her rich black hair shaved, to be allowed to grow no more. From that day she commences a life of shame. Her lot is not regarded as an affliction to which all are liable, and which entitles the sufferer to universal sympathy, but as a retribution for the vices of a former birth. The gods hold her unworthy of the joys and honours of marriage. The husband's relatives do not scruple to charge the loss of their kinsman on her sins. Then religion teaches that the only atonement she can make, the only path whereby she can escape days of infamy and woe, is self-destruction. She ought to burn with the clay of him whom she had never seen but at the wedding, or under whom she had lived in bondage for years. The benign spirit of Christianity has now averted this final stroke; but the life thus spared is a life of sorrow and shame. The world scorns her; and the care of her own family is to keep her steps so watched, her spirits so broken, and her frame so weak, that she may not bring disgrace upon them. Should their endeavours fail, her crime cannot make her condition much more severe. With us, a widow's weeds are the signals of charity, inviting commiseration and respect; in India, they are the brand of justice, inspiring horror. No human being is more to be pitied than a young Hindu widow. Then it is to be remembered, that this class is far more numerous in India than amongst us: for, first, every man, without exception, marries and may re-marry as often as he likes; secondly, every bride is a young girl—a child; thirdly, every female once widowed continues a widow for life. From these three causes, widows in India must be at least twice as numerous as in England; and when

it is remembered that the population of India is sevenfold that of the British Isles, it will be seen what a multitude of breasts are pierced by Hinduism with continual sorrows.

When a death is approaching in a family, certain ceremonies are practised which need not be noticed here, as they belong rather to the head of religion than of manners. Care is taken that the dying man shall not be surprised upon his bed, nor even upon a mat; for in such a case, his soul, upon entering another body, would have to carry with it this cumbrous appendage. To save him this burden, a clean cloth is spread upon the floor, and there he is laid. When death has taken place, the assembled relatives mourn aloud; and the widow, if one be left, is, as well she may, violent in her sorrows. She passionately reproaches the deceased for having abandoned her, screams, tears her hair, and gives every testimony of despair.

Among the Bramhans the corpse is carried on a bier, placed on a pile, and burned. Among some of the other castes the same usage prevails; but in others it is buried, being carried to the grave dressed as in life, and in a sitting posture. Headstone, tomb, or inscription, they use none. The upward-pointing stone tells of a resurrection which their faith knows not.

From their homes and domestic life we pass to their villages and towns. Small groups of huts are occasionally found on the open plain; but they are few, and inhabited only by the very poor. No considerable village and no town is found without a high, thick wall of mud, except in those districts which have long enjoyed the security conferred by British government.

In the villages the houses are closely grouped together, without any attention to order or to airiness, and frequently with less cleanliness than could be desired. This is much owing to the practice of bringing within the walls every night all their cattle, which are very numerous; and their presence leaves effects, even after all their droppings have been carefully gathered, either for fuel, or to wash out the houses. The men of the village wear, for the most part, nothing but a few hand-breadths of cloth; but the women are always modestly covered, except, indeed, in those parts of India where it is the usage for all females, *except the immodest*, to go uncovered from the waist up; a custom which, strange as it is, they hold so sacred, that it is said that a queen of Maliyâla once ordered a woman to have one of her breasts cut off, because, on returning from a distant country, she followed the practice, held by her majesty to be insufferably foreign, of covering her chest. The Hindus have a very complete organization for village government. The smallest village has its head-man, who leads their councils, arbitrates in disputes, and is the responsible medium of all communication with the government. Every town has a regular staff of officers, comprising the head-man, the accountant, the tax-gatherer, the astrologer, the irrigator, the poet, the schoolmaster, and the watchman; besides whom, the blacksmith, the joiner, the barber, and the goldsmith, are often included; and some add the washerman, the cowkeeper, the potter, and the dancing-girl. These officers, having each his defined sphere, preserve perfect order in local affairs, and much lighten the duties that would otherwise devolve on the central government.

For years after the Mysore was taken under our administration, each division of the kingdom, including, perhaps, a population of a million, was superintended by a single gentleman, without one European assistant. A fact like this, as indeed the ease with which all India is governed, strongly illustrates the value of the village system. Each little community has a head responsible for its good order; and every one of these head-men holds an office venerable by immemorial tradition. Even the Mussulman governments did not violate these ancient corporations; and by the English they are fully recognised. Over ten head-men is placed a superior officer, and the native model of rank graduated from authority over one to authority over ten, a hundred, or a thousand towns. This complete and simple plan of local government, Mr. Mill, resolved at all risks to establish his amusing theory, that the Hindus were barbarians, characterizes as "unskilful and rude." Among the natural effects of this system, is the profound deference for authority universal among the Hindus. Accustomed, even in the remotest villages, to see persons govern merely by virtue of office, they are trained to venerate power, and too often carry that veneration to servility. The village system is adapted to protect the ryots from the severity of a harsh government; but it is also adapted to prevent them from reaping all the benefits of a mild one; for as all matters are transacted through local officials, these are under strong temptations to turn their office to personal account. It cannot be doubted, that in our own territories many villagers suffer exactions wholly unauthorized; but it is better

to submit than to incur the resentment of the official men and their clique.

Such a number of these villages as any rajah could bring under subjection formed a kingdom. But it would not appear that the limits of a monarchical territory ever remained long settled; every petty war producing changes. Nor did such changes materially affect village interests. "The inhabitants," say the Parliamentary Committee of 1800, with much truth, "give themselves no trouble about the breaking up and division of kingdoms: while the village remains entire, they care not to what power it is transferred, or to what sovereign it devolves; its internal economy remains unchanged." Petty officers, intrusted with the rule of a few towns, and called *polgars*, (*pâlyagâra*, literally, "village man,") took every opportunity of gaining independence, and in unsettled times were never held by the rajah, but with a loose and doubtful allegiance. The rajah was always lord of the soil, and to him were paid all the rents. Each village community, through its head, rendered a certain share of its produce, generally in kind. Menu authorizes the King to take of grain "an eighth part, or a sixth, or a twelfth;" but these terms are far milder than those found in actual use. The committee just quoted report, that a third, and even a half, of the produce, was frequently taken by the king; and that under the Mohammedan governments, the poor cultivator "seldom retained more than a fifth" of his produce. This report is founded on the evidence of Place, Munro, and others, whose authority is conclusive.* The Mussul-

* Mill, vol. i.

mans also introduced a system of farming to Zemindars the revenues of a certain district. They paid to the king a stipulated sum; and, though frequently restrained by conditions as to the terms they would impose on the ryots, generally burdened the latter with intolerable exactions. Lord Teignmouth unhappily established this system in many of our provinces: it still exists, and has many advocates; but I never conversed with a native in the rural districts who did not testify towards its lively abhorrence, and earnestly deprecate all second parties between the cultivator and the government. I cannot conceive of such a system existing in any country, and, above all, in an Asiatic country, without exposing the husbandman to numerous and oppressive wrongs. The more immediately our government deals with the mass of the people, the more clearly will be known the equity of their principles, and the mildness of their intentions. All interposition is detrimental at once to the interests of the cultivator and to the popularity of the rulers.

The Hindus have never known any but despotic governments. "A king," says Menu, "is formed of particles from the chief guardian deities, and consequently surpasses all mortals in glory. Like the sun, he burns eyes and heart; nor can any creature on earth even gaze on him. He is fire and air; he, the god of criminal justice; he, the genius of wealth; he, the regent of waters; he, the lord of the firmament. A king, even though a child, must not be treated lightly, from the idea that he is a mere mortal: no, he is a powerful divinity that appears in human shape. In his anger, death." But, notwithstanding these extravagant

concessions to royalty, the king has alway been required to hold the Brahmans as his natural council, while laws, in some cases wise and benign, were instituted to guide his conduct. On the whole, tyranny has been the rule, and a paternal king a very rare exception. Each subordinate ruler exercised in his own province absolute authority; but his office and his head were always at the disposal of the king, unless, indeed, he were protected by his power, or by troublous times. Revenue and legal authority were constantly vested in the same officers. Trial by jury was in use; the number of jurors consisting of not less than five; or whatever might be the number, it was always odd, in order that, on a division, there might be a majority, the verdict of the majority holding good.

In observing any department of Hindu life, one soon perceives that all its relations are pervaded by a reigning peculiarity. Besides the distinctions of ancestry, wealth, and education, which everywhere graduate society, here exists an artificial order, by which persons close in neighbourhood, and equal in fortune, are rendered incapable of domestic intercourse. This thick barrier, caste, is held to be of divine origin. "Formerly," as the sage Parasara teaches, "when the truth-meditating Brumha was desirous of creating the world, there sprang from his mouth beings especially endowed with the quality of goodness; others sprang from his breast pervaded by the quality of foulness; others from his thighs, in whom foulness and darkness prevailed; and others from his feet, in whom the quality of darkness predominated. These were in succession beings of the several castes, Bramhans, Kshetriyas, Vaisyas, and

Sudras, produced from the mouth, the breast, the thighs, and the feet of Brumha." The popular account describes the Kshetriya as born from the creator's arm. These castes have thus distinct origins, and natures equally distinct. They repel the doctrine, that "God made of one blood all men to dwell upon the face of the earth;" and, in opposition to it, maintain, that the different castes of men have natures as dissimilar as the different castes of grain, fruit, or animals. Caste is their word for species. Wheat, rice, and Indian corn are different castes of grain; mangoes, bananas, and tamarinds, different castes of fruit; tigers, camels, and elephants, different castes of animals; and Bramhans, Kshetriyas, Vaisyas, and Shudras, different castes of men. "You may say, if you please," they will observe, "that Bramhans and Shudras are both men. They are both men, if you will, just as a horse and an ass are both animals; but as you never can make an ass of a horse, nor a horse of an ass, so you can never make a Bramhan of a Shudra, nor a Shudra of a Bramhan." The idea that the out-castes are sprung from the same stock as the rest of mankind is scouted with disgust.

Into these four divisions, then, is society parted; each being a separate commonwealth, with its own heads, its own prejudices, its own pursuits, and its own laws. The various castes may not eat together, may not intermarry, may not reside in the same house, and may not assume each other's professions. Thus they are really wider apart than if separated by national distinctions, or even than races alien in blood and complexion. Again, the calling is transmitted from father to son, and it passes on through indefinite generations.

The design of this was doubtless to secure perfection in the various departments of trade. Whether it has done this or not, it has certainly established professional genealogies. "Old houses" and "ancient families" are common things in India. Every tailor may confidently reckon that his sires clipped and fitted since before the days of the Cæsars, and every barber can boast an ancestry of barbers who shaved in remote antiquity: the weaver, too, the joiner, the potter, the washerman, and the blacksmith, may each pride himself that the line of his fathers stretches up through long centuries. How far this has contributed to the progress of the arts, appears in the fact, that for ages the arts have made no progress. This system would, in an unsettled state of society, prevent arts from being lost, and for some generations would promote advancement; but in the lapse of ages, stagnation must result; because natural adaptation is violated, and a settled order of proceeding formed, which all are trained from infancy to revere, and which no one thinks of breaking. Great nicety in manual execution might be expected from hereditary artisans; and this has been attained in India, perhaps, more than in any other country,—but at the price of all originality. With the rude implements used fifty generations since, the Hindu weaver, carver, or goldsmith executes most delicately; but he would deem it presumptuous to think of improving on the plans of the ancients, who were far wiser than men of modern days.

The duties of the several castes are thus defined in the *Vishnu Purâna:* "The Bramhan should make gifts, should worship the gods with sacrifices, should be assiduous in studying the *Vedas*, should perform libations

and ablutions with water, and should preserve the sacred flame. For the sake of subsistence he may offer sacrifices on behalf of others, and may instruct them in the *Shastras;* and he may accept presents of a liberal description. . . . . The man of the warrior-tribe (Kshetriya) should cheerfully give presents to the Brahmans, perform various sacrifices, and study the Scriptures. His especial sources of maintenance are arms, and the protection of the earth. The guardianship of the earth is, indeed, his especial province: by the discharge of this duty a king attains his object, and realizes a share of the merit of all sacrificial rites. By intimidating the bad, and cherishing the good, the monarch who maintains the discipline of the different castes, secures whatever region he desires. Bramha, the great parent of creation, gave to the Vaisya the occupation of commerce, and agriculture, and the feeding of flocks and herds, for his means of livelihood; and sacred study, sacrifice, and donation, are also his duties, as is the observance of fixed and occasional rites."

"Attendance on the three regenerate castes is the province of the Sudra; and by that he is to subsist, or by the profits of trade, or the earnings of mechanical labour. He is also to make gifts; and he may offer the sacrifices in which food is presented, as well as obsequial offerings."

The Bramhans, the beings who, "especially endowed with the quality of goodness," sprang from the creator's mouth, are ranged under two divisions; the one sacred, the other secular. Those of the former class can accept no employment but one strictly religious or literary; the latter may maintain themselves by any honourable

calling not involving commerce or menial duties. The *Vydyeeka*, or sacred Bramhans, form the *Gurus*, or religious teachers; the *Pûrohitas*, or priests, officiating at high solemnities, as also the more ordinary temple Bramhans, and astrologers. The *Loukeeka*, or secular Bramhans, form accountants, magistrates, and other officers of government; are employed as moonshies by Europeans, and even enrol themselves, at least in Bengal, in the British army. I knew one case of a Bramhan being engaged in commerce; but his brethren did not hear it mentioned without evident pain. They would not, however, consider it improper to have an interest either in agriculture or commerce, which did not require personal services of an undignified kind. All Bramhans, though dishonoured by trade or labour, deem begging no degradation: indeed, being gods of the earth, it is their special right to receive gifts from all men, and in so doing they only receive their own. "Whatever exists in the universe," says Menu, "is all in effect, *though not in form*, the wealth of the Bramhan, since the Bramhan is entitled to all by his primogeniture and eminence of birth. The Bramhan eats but his own food, wears but his own apparel, and bestows but his own alms. Through the benevolence of the Bramhan, indeed, other mortals enjoy life."

The dignity claimed for this caste is in keeping with the usual extravagance of Hindu imaginations. "When a Bramhan springs to light, he is born above the world, the chief of all creatures." And again: "All the universe is subject to the gods, the gods are subject to the Mantras, the Mantras are under the power of the Bramhans, and the Bramhans are therefore our gods." And

right wondrous are the feats which some of these illustrious terrestrials have performed. One of them, in old time, swallowed the sea at three sips; another turned the moon into a cinder; and a third manipulated and reduced the sun. The person of a Bramhan is sacred: whatever be his crimes, he must not be put to death. It required some nerve in our authorities, at first, to set aside this exemption; but they did it firmly, and with success. So far from punishing a Bramhanic murderer, he who laments the victim of a priestly hand is required, for so doing, to make an atonement. A person of inferior caste who strikes a Bramhan with the design of hurting him, "shall be whirled about for a century in hell."

Beside the division of Bramhans into sacred and secular, they are subdivided into castes. Of these, four are called after the four *Vaydas;* but that division is refined upon, in consequence of sectarian distinctions: Vishnu Bramhans, of two sects, and several divisions of Shiva Bramhans, contend for the pre-eminence. Most of these sub-castes will not intermarry or eat together. All the other castes are in the same manner split up into sections, each section holding itself in seclusion from all the others. In common parlance, you scarcely ever hear of four, but always of eighteen, castes; and even that number is far short of the reality. In fact, no one can tell into how many of these unsocial detachments the Hindus, taking all their nations together, have separated themselves.

The Bramhan, having sprung from the creator's mouth, is naturally the teacher of all other men. He alone may read the holy *Vayda;* for should one of in-

ferior caste dare to scan even the title of those celestial tomes, his head would split in twain. The Bramhan, then, is the depositary of knowledge; to him alone are confided the mysteries of religion, and the deep teachings of astronomy, logic, ethics, and all higher sciences. Every Bramhan receives an education: with some it does not proceed beyond the simplest elements; and I remember one who had difficulty in reading; but only one. They invariably know more tongues than their own; and many of them can fluently speak and write three or four languages, and perhaps speak, without writing, two or three more. Of Sanscrit the common order know nothing but a few prayers, or selections from sacred books, which they cannot translate. But every man who makes the least pretension to respectable attainments, knows something of the sacred tongue. Celebrated pundits found schools to which students resort, and with wondrous patience commit to memory grammars, lexicons, texts, and treatises. It is positively astounding to hear a Bramhan, when asked the meaning of any Sanscrit word, rhyming over synonyme after synonyme, and counting by his fingers as he goes, till he has reached perhaps twenty, or more; and this he will do with any important word that occurs. I do not mean that every Bramhan who knows Sanscrit can do so; for that is not likely: all heads cannot carry a lexicon through the world; but it is more frequent than we should imagine possible. The study of language is the one good point in Hindu education; all the training this gives to the taste, memory, and judgment, the educated Bramhans enjoy; and it is this, not any studies of logic or metaphysics, which give them the mental

acuteness for which they are remarkable. Of their logic, such as it is, few, very few, know anything; and their metaphysics are not sufficiently studied to form the general mind.

Poetry is an essential part of polite education. No man pretends to learning who cannot make verses. Their rules of composition are very complex, and the styles of versification manifold. Rhyme takes place, not on the last syllable, as with us, but either on the first or second. The poetical genius of the Hindus is, perhaps, generally ranked too high. Their imagination is active, and frequently bold; but their knowledge of nature, whence alone the imagination can draw her materials, is limited, and, consequently, their similes, metaphors and allusions are confined to a narrow range. In modifications endless, the arched eyebrow is presented to you as a bow, and the flashing eye as a resistless arrow. The lotus usurps the place of all flowers; its hues, its shape, its scent, and its watery dwelling, figure in ways so numerous as to surprise you at the poet's art, but to leave a painful sense of his poverty. In Hindu poetry, as in all others, the sun and moon shine with frequent and glorious appearances; and old Ocean, enamoured of the lunar beauty, heaves high his breast for joy, when he sees the silver countenance turned fully on him, or beginning to re-appear after having been averted. The lion, too, though long extinct in India, still appears in every creation of her poets with all his wonted majesty and dread. The groves of India know not the joy of singing-birds; but the *bringa*, a musical insect, is made the most of, and his drowsy hum introduced as frequently as if it had all the strings

of that sylvan harp on which our summer delights to play. Turgid, grotesque, and sometimes admirably ridiculous, images are paraded with great musical display; but, for an European, harmonious numbers flow in vain to dignify the march of a sun with his head in a blanket, or a monkey making a pyramid of his tail!

One of the finest passages in the Vishnu Purâna is that, describing the birth of Krishna, where Devaki, his mother, is compared to the dawn and he to the sun. Professor Wilson's prose translation is easily cast into the following form:

From Devaki, a fair and glorious dawn;
Th' Imperishable, earth's protector, lotus eyed,
Arose t' expand the petals of Creation's flower.
The day of that high birth; joy the horizon decked,
As when bright moonbeams gild th' entire sphere.
When the Birth-Giver near'd our mortal air,
Strange pleasure glowed in breasts of holy men,
The strong winds held their breath,
And silent lingered the expectant streams.
Then murmured the rude sea harmonious strains,
And to his music new, the spirits bright,
And nymphs celestial danced for joy and sang.
The gods, walking the radiant sky, poured downward flowers,
And altar fires had in their scented flame
A strange and tender mellowness.
In the deep midnight, when the stay of all
Was nigh to birth, the clouds made music low,
And rained a rain of flowers.

Until very lately the Hindus could scarcely be said to have a prose literature; and consequently they had no trustworthy history. The absence of prose has this advantage for missionaries, that in many of the languages they will be the founders of that style of writing

which, as knowledge advances, must sway the public mind. In Canarese, a good prose style is already formed; the Bramhans using just that of polite conversation. Authorship, though principally exercised among the Bramhans, is not confined to them: many works have issued from anti-Bramhanical pens; and not a few from those of men of the inferior castes. The only books in general circulation are scraps of the *Purânas*, and collections of fables.

But few of the Bramhans profess astronomy. It is confined to the *Jotishas;* each town has its wise man, who computes nativities, names the fortunate day for marriages, and the hour when a journey or other enterprise may commence under auspicious stars. The dread of unlucky days, which even among ourselves is sometimes grotesquely combined with general intelligence, reigns in India over all classes, from the highest to the lowest; and perhaps over the highest most firmly. Friday is a very unlucky day. Augury also is associated with astrology: the chief bird of omen being *garurda*. the sacred vulture. The raven is unlucky; and the house on which an owl lights ought to be forsaken. Lizards and serpents are also in the secrets of Fate; nor are foxes and hares denied a share of her confidence. A journey is often postponed, or a day's work abandoned, because a kite, a snake, or a fox has taken a position that warns of unseen danger. When a man is asked to give his daughter in marriage, he waits till he hears a lizard chirp, and, when this oracle has pronounced in favour of the proposed alliance, he accepts it.

In everything that constitutes general information the

Bramhan is utterly deficient. He is taught languages, poetry, metaphysics, mythology, and possibly the elements of astronomy; but of the world, its people, and every subject in natural science, he remains in the most complete, and the most contented, ignorance. No history acquaints him with the past; no travels, with the homes of other people; no maps enable him to carry in his mind a picture of the world; no geography, to judge of the position, the productions, and the climate of places with outlandish names; no periodical press informs him of passing events; and no science unfolds the relations of external nature. By his very education he becomes more ignorant; for ignorance consists not merely in the absence of all ideas on a subject, but also in the presence of false ones. The savage who has no idea at all as to the size of the earth, is less ignorant, and less obstinately so, than the Bramhan who thinks he has divine authority for believing it to be forty thousand times larger than it is. Thus it is with every thing he learns. Were he let alone, he might at least form some notion of the size of India; but having once read the *Puránas*, he is ever after assured that it is twenty-seven thousand miles long, or considerably more than the circumference of the whole globe! So also he learns that the sun travels in a chariot three thousand miles long, with a pole of six thousand; that mountains are placed on the earth to keep it steady; that earthquakes result from the yawning of the god-serpent, who upholds the world on his head; that the Creator "formed birds from his vital vigour; sheep from his breast; goats from his mouth; kine from his belly and sides; and horses, elephants, sarabhas, gayals, deer,

camels, mules, antelopes, and other animals, from his feet; whilst from the hairs of his body sprang herbs, roots, and fruit." Farther, that on four mountains, around the grand mount Meru, grow four trees, each "spreading over one thousand one hundred *yojanas*, (five thousand five hundred miles,) and towering aloft like banners on the mountains;" and that one of these "has apples that are as large as elephants; when they are rotten, they fall on the crest of the mountain, and from their juice is formed the Jambu river." Of that pleasant phenomenon, "a sunshiny shower," he learns the following explanation, which he is bound to consider as true, as we will own it is poetical:—"The water that the sun has drawn up from the Ganga of the skies, (the Milky Way,) he quickly pours down with his rays, and without a cloud: and men who are touched by this pure rain are cleansed from the soil of sin, and never see hell: this is called celestial ablution. That rain which falls when the sun is shining, and without a cloud, is the water of the heavenly Ganges, (Milky Way,) shed by the solar rays." Nor are his thoughts of rain in general much more cleared by Purânic enlightenment. "The sun, with his scorching rays, absorbs the moisture of the earth, and with them nourishes the moon. The moon communicates, through tubes of air, its dews to the clouds, which being composed of smoke, fire, and wind, can retain the waters with which they are charged: they are therefore called *abrahs*, because their contents are not dispersed. When, however, they are broken to pieces by the wind, their watery stores descend, bland, and freed from every impurity by the sweetening process of time." (*Vishnu*

Purâna.) The *Ramâyana* teaches that Ceylon is not accessible to mortals; and this is firmly believed by thousands who are not five hundred miles from it. Being crowded with such absurdities on every subject, the mind of a Bramhan is not merely a dark void chamber, where light and furniture are lacking, but a dark, thronged lumber-room, where a sound idea cannot enter without wounding itself against some store chest, or losing its eye against some splinter of Purânic lore.

Their ignorance of the actual world is perfect. Of the countries bordering on India they have none but the most foggy ideas. Until our late war with China, many of them had scarcely heard its name. Of England their traditions are choice. "When you go from Madras upon the sea, what do you find beyond the sea?" once asked a respectable banker, in a crowd; "is it a single town or an extended country?" "An extended country certainly." "Then you have fields?" "Of course." "And who cultivates them?" "Persons who follow that calling." "Yes; but what kind of people are they? are they black or white?" "White, to be sure." "What! white like yourselves?" "Yes, certainly." "And do they labour in the fields like ryots?" "That they do, and far harder, too." "Only think," they all cried out, with laughter and astonishment; "only think of Englishmen working in the fields like ryots!" They had never seen an Englishman, but as a soldier or a gentleman. Curiosity was whetted by this discovery, and he proceeded: "Then what grows in your fields? rice?" "No." "What! no rice?" "No." "Not in the whole country?" "Not an ear."

They looked at each other with wide eyes, and cried, "*Abah! abah!* how queer! a country without rice!" My examiner, returning to the charge, said: "Well, but if you have no rice, you have at least raagi?" "No; we have no raagi." "No raagi! neither rice nor raagi! Who ever heard of a country without either rice or raagi?" Had I told them of a country without either soil or sky, they could not have stared more exquisitely. "Ah!" exclaimed a youth, less able than the rest to conceal his thoughts, "I always knew how it was; originally they were inhabitants of this country, but a curse drove them away; and now they are trying to return." The men who were taking part in the conversation glanced at me to see if I were offended, but did not seem disposed to differ with their indelicate neighbour. Not wishing to leave our nation in so low esteem, I said, "I will tell you a tale out of one of your own books." They always relish a tale; and forthwith I had every ear. "A white crane was one day fishing by a tank, when, looking up, he saw a swan, and, struck with his plumage, thought he must be a relation of his own. 'Stranger,' he cried, 'whence do you come, and whither are you bound?' 'I come,' said the swan, 'from Satyaloka,' (the heaven of Brumha, whose chariot is drawn by swans.) 'and to Satyaloka am I returning.' 'And, pray, what kind of a place is Satyaloka?' 'Oh, it is the dwelling of the glorious Brumha; I could not make you understand what kind of a place it is.' 'But you must tell me; I desire to know.' 'Well, if you will know, it is a gorgeous place: for stones, we have jewels; for sand, gold dust; for water, ambrosia; and everything equally superb.'

'But,' asked the crane, little excited by such fineries, 'have you any frogs there?' 'Frogs there!' rejoined the swan; 'no; we have no frogs there.' 'Then,' observed the crane, 'you may go back to Satyaloka, if you are in the mind; but I have no notion of a country without frogs.'" Ever apt to catch the moral of a fable, they laughed, pointed to the youth, and said: "He, then, is the crane, for thinking your country was cursed, because you have no rice or raagi." Then followed a crowd of questions, as to what we lived upon.

On one occasion, a Bramhan, who had long resided in Bangalore, asked me to give him some account of England. Before doing so, I required him to tell me just what he had heard. He said: "The common belief among us is, that when you get beyond the sea, you find *Londonpatam*, 'London city;' and that one city is the whole of England: it has eighteen streets; each street is inhabited by one caste; each caste is distinguished from the other by a peculiar head-dress; and over all these is the king-*durray!*" Though the word "company" is constantly on their lips, as designating the power by which they are ruled, scarcely any of them, beyond the limits of the Presidencies, has the least idea of its meaning. Whether it be man, woman, or child, a country, king, or army, they cannot tell; and very, very few of the millions who bow before that potent name, are aware that it denotes a handful of peaceable merchants. Many, in the neighbourhood of English settlements, are said to be under the impression that the Company is an old woman, who never dies; but this is very likely to have originated with some wag among our own countrymen.

Taking, then, the entire mental condition of an educated Hindu,—that is, of the better order of Bramhans,—it is very peculiar. He has much mental culture, the culture of early and close study, of considerable acquirements in language, of an acquaintance with elaborate productions, and of poetry as studied, as committed to memory, and as attempted, if not actually composed. These qualifications, with some turn for metaphysics, and considerable practice in familiar argument, present a mind far advanced in refinement. But in all its movements you see the fatal effects of the instruction it has received. It has studied, and in studying has grown quick and acquisitive; but the facts it has learned are nonsense and absurdity. It is an eye trained to see in a cavern; remarkably quick to discover objects in its own dim light, but unable to bear the day. The Hindu mind is slow to receive new facts: leave it among polemics, poesy, speculation, and language, it is at home; but every fact that bursts upon it from the universe without dazzles and annoys; and if you place before it the great field of knowledge, it cannot endure the blaze, closes before it, and confidently declares it a wild, meteoric flash. Power of application, vigour of memory, quick discernment, and rich fancy, are the good points of the Bramhanical mind; its vice is narrowness,—a narrowness the most tight and incurable; but this is the vice not of natural defect, but of educational perversity. The Bramhan has the learning of a scholar, with the ignorance of a child, and the superstition of a savage.

The second caste in rank, the Kshetriya, or warrior-tribe, sprang from the breast or arm of Brumha, and

were, as will be remembered, "pervaded by the quality of foulness; being thus inferior to the Bramhan, who was "endowed with the quality of goodness." From this caste all kings ought to be chosen; but even the prince is, in birth, second to the meanest Bramhan in his realm. The Bramhan will fawn upon him with hyperbolical flatteries, and cringe before him with abject servility: but he would not sit down at his board, or drink from a cup offered by his hand. Did he do so, he would lose his caste. It is now matter of doubt whether the Kshetriya caste is not extinct; but the Rajpoots claim to be its representatives, as do also some ancient dynasties. From all the glimpses which the native writings afford of military character as existing in this caste, and from much still observable among the nobler Rajpoots, it is not to be doubted that they were often animated by high martial daring. As a soldier, the Hindu is underrated among us. In their early wars, the chariot and the elephant figured largely. The variety of their weapons is great, and frequently the workmanship exquisite. Among their more ancient arms are the bow; swords, knives, and spears of the finest steel; and coats of mail, described as admirably wrought. At present they produce every description of fire-arm, from the finest brass cannon down to the most clumsy matchlock. They also manufacture gunpowder, and are expert at fireworks.

The success of the English in India has been altogether so marvellous, that, to account for it, the Hindus are represented as having been in all ages despicable poltroons. A different opinion, however, is expressed by those who write more recently, and who have better

weighed their history. They do not indeed describe them as possessing, in general, that "bull-dog courage," of which our armies boast; but they acknowledge, that in every war where their sympathies are engaged, they entitle themselves to high respect as soldiers. No one can read the narrative of Arrian, without feeling that even Alexander, and his conquering phalanxes, found the Hindus anything but despicable foes. In the first great battle, after he crossed the Indus, we are told that nearly all the Indian cavalry were cut in pieces, *on the field;* that the infantry did not retreat till they saw their cavalry destroyed, and the elephants in hopeless confusion; that two princes, and all the commanders of both infantry and cavalry, were among the slain; and that the defeated king, Porus, retreated with a fierce calmness, which the Greek historian contrasts with the conduct of the King of Persia, and which so moved Alexander, that he took much pains to save and to conciliate him. Arrian, while he states the fact, that Alexander, with all his ability and habitude of conquest, only subdued a country including two thousand towns, certainly leaves the impression that in no part of Asia did he meet more formidable enemies, or run greater risks.

Again, if we take Ferishta, also a historian belonging to an invading nation, we find statements that raise Hindu courage to the loftiest points of the heroic. The first raja was not defeated till after "an obstinate battle," and then burned himself alive. Another fought desperately for four days, then took refuge in a town, and finally "turned his sword against himself," whereupon "most of his adherents were slaughtered in at-

tempting revenge." In another battle "five thousand Mussalmen in a few minutes drank the wine of martyrdom;" another raja "drew his sword against his own wife and children, and, having despatched them, turned it in despair against himself." Again: "One of the forts called Munge held out for twenty-five days, being full of rajputs; but when they found the place no longer tenable, some rushed through the breaches among the enemy, and met that death which they no longer desired to avoid. Some threw themselves headlong from the walls, and were dashed to pieces; while others burned themselves in their houses with their wives and children; so that not one of the garrison survived this fatal catastrophe." At Sumnauth, the fame of whose gates Lord Ellenborough so gratuitously revived, the Mussalmauns, who came to destroy the celebrated idol of the place, commenced their attack while the inhabitants were praying to their god for help, and at once effected an entrance. But they were rushed upon with such fury that "from the time the king of day expelled the darkness, till the moon, fair bride of the night, illuminated the heaven with paler rays, the flames of war were not quenched with blood. The Mussalmen, wearied out with fatigue, were obliged to abandon all their advantages." The next day was spent in a continuous assault, which proved "more unsuccessful than the first." On the third day the Hindus gave battle in the open field, when Ferishta adds: "The fires of adverse rage illuminated the gleaming field, and death stalked with such power and execution around, that Time, trembling for his empire, wept." These records are not those of cheap victory over an imbecile foe.

Our own career in India has elicited, both in our service and against us, displays of native daring which, had they occurred in Grecian history, would be on the lips of all. Heroism was never bolder nor nobler than in Clive's sepoys at Arcot. At Bhurtpore, the Indian Badajos, when the gallant 75th recoiled, a sepoy regiment faced and overbore the danger.* The native needs the leading of his white officer; but he very seldom fails to do him honour. Cases of panic have occurred, as in Frazer's memorable charge at Perwunt Durrah;† but, in all the daring strokes of his Indian career, Lake was never so disgracefully forsaken by sepoys as he had been by British troops at Castlebar. The various nations of India differ much in bravery, as in everything else. The inhabitants of the low countries on the coast are far inferior to those in the table lands, the hilly districts, and especially to those of the north-west provinces. Had the places chiefly resorted to by Europeans lain in the Mysore, the Mahratta country, Rohilcund, or Delhi, they would have brought away a different impression of Hindu courage.

Were not this view of native character intimately connected with important moral considerations it would be to me a matter of comparatively little interest. We shall feel more or less deeply our obligation to benefit India, in proportion as we do or do not see the hand of God in bringing it and us into the singular relation we now sustain. When we see Clive at Arcot with eighty English and a hundred and twenty sepoys repulsing ten thousand men; in Bengal, defeating, with

* See Wilson's Notes to Mill.
† Buller's "Peep at Kurdisthan."

three thousand, the Soubadhar at the head of fifty-eight thousand; acquiring the sovereignty of thirty millions of souls, when only nine hundred Englishmen had yet landed among them; and, fifteen years after he had been an obscure clerk in Madras, disposing at will of the transcendent empire of the Great Mogul: when we see crown after crown fall before us as by enchantment, Tipu vanquished and slain; the Pindarees annihilated; the Mahrattas tamed, the Goorkhas humbled, Scindiah subjugated, Burmah divided with us, the Punjaub laid at our feet; and all within the memory of man,—all, indeed, while one of the leaders in the last assault on Tipu (Wellington) still lives: when we see all this, if we ascribe it only to the dastardly soldiership of the natives, then the review brings no other feeling than national pride. But when we remember that never before did Asiatic or European win over these nations such miraculous victories; and that every feat of our countrymen in this race of conquest has been emulated by native auxiliaries; then the impression is resistless, that the unmatched empire, now reposing under our eye, has been given to us by what Professor Wilson (a historian not addicted either to the marvellous or the spiritual) calls, in reference to the Mahratta war, "an overruling destiny." Yes, never in human affairs was an overruling destiny more conspicuous. Never, since the world began, was so vast and so civilized a population brought with like speed to be a consolidated and peaceful empire under foreign sway. Of the campaign of the Sutledj, Lord Gough said, that "the hand of God was never more manifest." This may well be applied to our whole Indian career, from the day when a

thunder-storm put us in possession of Arcot,* to the day when the Sutledj swallowed up the strength of the Punjaub. God's hand has surely been manifest: whither does it point?

Whether the military caste be extinct or not, their peculiar glory is lost. Nearly all the modern kings are indisputably of lower origin; recent armies have been composed mainly of Shudras, and in our service the castes are all blended.

The third caste, the Vaisya, or merchant, springing from the Creator's thigh, and being pervaded by the qualities of foulness and darkness, takes rank below the Kshetriya. This caste usually receive an education sufficient for commercial purposes; and some of them push their way into elegant literature. None of them is ever found unable to write and keep accounts, except in case of very deep poverty. Their commercial system is far advanced. Shops of all descriptions abound; weekly markets are as common as among ourselves; the religious festivals serve for fairs; and banks exist everywhere. Their rate of interest is usurious, graduating from one to five per cent. per month. Their circulating medium is gold, silver, and copper money, coined in moulds that will bear comparison with those of some of our continental neighbours. Their pieces descend to the fourth of a farthing. In some Indian countries cowries (a species of small shell) circulate. They have a system of making bargains by signs; so that buyer and seller can put their hands under a cloth, and, without being observed, can debate and conclude the sale by touches of the fingers. This suspicious

* See Orme.

mode of dealing is not confined to Hindustan, but is known also in Persia. Their commerce is most defective in means of transport. Except upon a few of the great rivers, nearly all carriage is effected on the backs of bullocks: where the English have made roads, small bullock-carts are in use; but in the greater part of the country they have only native roads, which in the finest weather are scarcely passable for wheels, and in the rains are utterly impracticable. The ox toils alone in the work of conveyance; the elephant and camel are for kings; the horse is used only as a steed; the ass is resigned to the Lumbardi and the washerman; the mule (although, as shown in a preceding extract, the Vishnu Purâna gives an account of their creation as *a separate species*) is little known; and the day of locomotives is to come. The commencement of that day will mark a new era in the commercial history of India, and will be fertile of results in universal commerce. It will disclose unthought-of resources, and stir drowsy communities to wakeful enterprise. It will tend more than any other material cause to break up the monotony of Hindu life, and to carry all things onward with unheard-of progress. Nor could we easily overrate its tendency to complete the stability and consolidation of the British government, and to aid the diffusion of that light before which superstition hides.

Marine commerce offends the genius of Hinduism. It is impossible to be long at sea without violating ceremonial laws essential to purity. Hence considerable difficulty has been found in prevailing on some native regiments to embark; and no Bramhan of sound caste feeling would undertake a long voyage. With

them, as with the ancient Persians, this prejudice has much checked naval enterprise: yet a large amount of shipping exists; but its character is far below the ingenuity of the Hindus. That immobility into which the system of hereditary callings freezes the whole stream of art, has held naval architecture in precisely the same place where it stood long centuries ago. But a new spring is now warming their land, and signs of progress appear. Ships built on our models are increasing in number; and at Bombay, as is well known, they have produced, both for our Indian trade and for the navy, vessels of the highest order, far exceeding those built at home in strength and durability.

The fourth caste, the Shudra, springing from the foot of the Creator, and pervaded by the quality of darkness, is born to toil and to contempt. To this class belong all labourers in agriculture, and in arts, either the useful or the fine. Among them education is at a low ebb. Many of them cannot read; and comparatively few can write and keep accounts. But individuals are found who, through prosperous circumstances or bold talent, have gained an education not inferior to the Bramhans. In some languages also, the most noted authors have been of the servile class. The fact that agriculture and art are placed, in rank, below war and commerce, would seem already to indicate that the caste-division was fixed in a state of society, already so far advanced, that priests had the learning, armies the power, and merchants the wealth, by which they were all raised above the industrial classes.

Among the Shudras the most numerous and important class is the ryot, or agriculturist. From the earth our

frame sprang, and to the earth it must ever bend in search of renewal; whence it came itself, comes all its strength. It receives nourishment only from its mother's breast. To cultivate this nourishment in flocks and in fruits is man's original care. As cultivators, the Hindus are respectable. They are adepts at irrigation, well understand the seasons, know something of a rotation of crops, and rear a great variety of grains, pulse, and fruit. Their toil is softened by their generous climate. The farmer walks out lightly in the morning, with his team before him, and his plough on his shoulder; or, if it be needful, a plough on each. The furrow required being only a scratch two or three inches deep, the plough has neither coulter nor mould-board; a piece of wood, tipped with iron, serves for sole and share; a long stick fastened into this is the beam, and a short one the handle. The team consists of two oxen, or very frequently of an ox and a buffalo. The latter is invariably yoked opposite the ploughman's right hand, which is armed with a goad; for they say that the buffalo is so lazy, and his hide so dull, that even the goad would make no impression were it not applied with the stronger hand. A common proverb, to express bankruptcy of resources is, "I have neither an ox for the left hand, nor a buffalo for the right." The harrow is a few prickly branches; for so mild is the climate, that the seed prospers though left almost at the surface. The value and management of manure are very imperfectly understood. As in commerce, so in agriculture. horned cattle alone are employed. One of their duties is to thresh. A pole being fixed in the ground, a circle round it is swept clean, and strewed

with grain in the straw. An ox is placed close by the pole, and a rope attached to it passed round his neck; to him another is yoked, to him another, and so on to eight, ten, or even fifteen. They are then driven round and round, treading upon the grain, and forcing it out of the husks. As the ox in the centre has scarcely to move at all, compared with those on the outside, he is always the oldest and best trained, that he may preserve order. In their rounds they freely help themselves; but this is often prevented by "muzzling the ox that treadeth out the corn." The carts of the country are very simple. The wheels support a frame consisting only of two long pieces of wood with cross bars. From this frame projects a pole, crossed, at its point, by a bar, so as to form a T. They have no collars, no saddles, no traces, no harness whatever, except a short rope passed round the pole and round the bullock's neck, and a halter fastened *in* his snout. One is placed on each side of the pole; the cross-bar, or yoke, is laid upon their necks; and, instead of drawing, they push with the top of their shoulders.

As many of the Indian crops do not flourish without artifical irrigation, to provide which has been one of the husbandman's chief cares. They have most skilfully chosen sites for tanks,—a word which conveys a very inadequate idea of the noble lakes they often form. In favourable parts of the country, you see these lakes, after the rains, gleaming in every direction, beautiful to look upon, and each more valuable than rivers of wine or oil. When the English government in the Mysore ordered their engineer to poin out sites for new tanks, he found that the natives had already occupied

almost every eligible spot. Mr. Mill, determined that, right or wrong, the Hindus shall not be only "rude," (as he says some thousands of times,) but stupid too, observes, "The ingenuity of sinking a hole in the ground to reserve a supply of water, need not be considered great." Had he seen the spacious tank at Coongull, ten miles in circumference, or had he spent a single day in any part of India where tanks exist, he would never have called them "holes in the ground." In a former chapter, details of the progress of irrigation were given.

It is hard to say whether grinding corn belongs to the operations of agriculture or of cookery. With us it is separated from both. But in India it falls decidedly under the latter category; for every housewife grinds her own corn in a little mill composed of two stones, the size of Cheshire cheeses. They lie one upon the other. The under one has in its centre a peg, on which the upper one revolves, being turned by means of another peg. A woman sits down with a basket of grain, and leisurely turns the mill till enough for her meal is ground. Very often you see "two women grinding at a mill."

Ever since the Deluge, men in the earliest stage of society have lived chiefly a pastoral life; herds requiring less toil than crops. The keeping of cattle is necessarily combined with all husbandry; and in India is so to a far greater extent than would be expected, where the ox is never used for food. The cowherd ranks high among ryots, and the licentious gambols of Krishna with members of that caste, serve to give to them in India all the poetic advantages which, in Europe, have

been enjoyed by the shepherd from Arcadia to Ettrick. On the other hand, the keepers of sheep are much despised, live generally in detached hamlets on an uncultivated plain, and have no society but their flocks.

After food comes raiment. The Hindu weaver has sent his fame to every land. Four materials feed the loom,—flax, wool, silk, and cotton. In all these the Hindus work. Flax does not yield a fabric genial to their climate, nor with silk and cotton is it at all desirable. It is therefore (at least in the south) wrought only in the coarsest form, for sacking and such purposes. Wool, again, they need only in small quantities, and in light forms; but in their camlets it is admirably adapted to their necessities; and to their shawls, I believe no rivalry is attempted. Their silk is in every pocket, and their muslin we have tried in vain to equal. The loom is placed in the open air, the warp stretched full length, a hole dug for the treadle, and the weaver sits on the floor. To see him at work you would expect an article of the rudest kind; and how he, with such implements, produces such fabrics, is to us unaccountable. An interesting description of their instruments, with plates, will be found in Hoole's "Madras, Mysore, and South India;" and also in Baines on the Cotton Manufacture.

Amongst us the weaver would toil in vain, were not his efforts supplemented by those of the tailor. But in India millions of men and women live and die, for whose clothing no instrument beyond the loom has ever plied. The man girds one long cloth round his loins, and adjusts another round his shoulders; the woman girds herself, covering all the lower part of the

person, and reserving free a fold for the upper parts. Their attire is then complete, without other aid than the cloth just as it came from the loom. The frock-coat and bodice, however, are growing more general; and for these the tailor is called in. But he and the weaver accomplish between them the clothing of the whole community. Hosiers and hatters, button-makers and pin-makers, with trimming manufactures in all varieties, are perfectly unknown; and a Hindu milliner is yet unborn.

Fed and clothed, man feels the weather, and must build him a shade. As architects, the Hindus have made small progress. For so refined a people, their houses are mean, and their public buildings, when compared with Egyptian, Greek, or Gothic examples, are without grandeur. The only attempt at it is in tall pyramidal towers; and even here we find no variety. They were unacquainted with the arch, till learned from the Mohammedans. Their temples are nearly all on one model, differing only in scale or sculpture. They employ the column in various examples, some graceful, and some grotesque; here you see Egyptian affinities. Many of the structures most lauded by writers are Moorish; and I have read praises of Hindu architecture, founded on buildings near Calcutta, in which, from Europeans, they have copied snatches of Grecian style. The Hindus cut stone well, make bricks well, build admirably, and in plastering are without rivals; but as architects they rank low. The works which display most talent, such as the vast excavated and above-ground tanks, belong to the department of engineering.

A house built, it is natural that articles of convenience

and ornament should be demanded for its use. We have already seen that in this department the Hindus have required little of art. With us domestic comfort has done much in multiplying and perfecting handicrafts; but in India cabinet-makers, paper-hangers, glass-blowers, house-painters, glaziers, and upholsterers, are no more heard of than, in England, are hookah-boys and palankeen-bearers. The joiner appears only in the door, and perhaps also in the roof, his other duties lying exclusively in preparing agricultural implements and vehicles. In fact, no arts are encouraged by the Indian household, but those connected with culinary preparation; and here the patronage is scanty. What skill have not our kitchens and tables called forth among founders, braziers, tin-smiths, platers, cutlers, potters, glass-makers, and many a craft beside? But to the Hindu fire-side the brazier and potter alone are called, and they are only required to produce a few pots of beaten (not cast) brass, and a few of coarse earthenware. Consequently, though the art of founding is carried to a high state of perfection for casting guns and gods, it has no domestic application. Cutlery exists almost exclusively for the arsenal; and porcelain of any kind is unknown.

The Hindu craftsmen are, however, ready copyists. They soon become good coach-builders, good cabinet-makers, or good artisans in any line in which our models are placed before them. Nor are they slow to adopt new plans, if they offer a prospect of remuneration; but, on the contrary, eagerly and precisely imitate our furniture, our boots, and our cotton cloths.

The chief, and (except decorative weaving, embroi-

dery, and dyeing or printing cloth,) almost the only, ornamental art of India lies in the hands of the jeweller and goldsmith. The fame of these is old and high. Their chain and filagree-work are exquisite, and, considering their tools, perfectly marvellous. The goldsmiths, as a caste, are obnoxious to the Bramhans, whose dress and appearance they closely imitate, claiming for themselves a far higher rank than their lordly priests judge seemly.

The idea of *fine arts* has never had an existence in India. Man's infantine, almost instinctive, art of drawing nutriment from his mother earth ranks beside pursuits that require the finest endowments. All art is servile, and consigned to the servile class. Then it is impossible to adjust the culture of fine arts upon the hereditary system. It would be rather difficult to legislate for lineal generations of musicians, painters, architects, and 'sculptors. Musicians can never rise above the level of our ale-house fiddlers; painters do not rank so high as our honest men who make sign-boards; and architects and sculptors are all confounded in the herd of workers in stone. As a necessary consequence, all these arts are in a contemptible posture. A Hindu youth of respectability who felt he could draw, would be under as little temptation to indulge his taste as the son of an English gentleman who thought he could make nails. The hereditary system shocks nature, and stuns her with the shock. All men naturally honour two classes of possessions,—the gifts of God, and the fruits of industry. Genius is, of all possessions, the one most immediately the gift of God; the works of genius exhibit both God's gift and man's labour; and

to them universal instinct hastens with a tribute. To fix those arts, for success in which genius is indispensable, in the crowd of drudgeries for which men want only hands and eyes, is to violate instinct, and to chain nature.

Their music is wretched, though favoured above the other arts; for a Bramhan may play, though he may never company with the professional musicians. Their instruments are dissonant and harsh. They have a gamut, and know sixteen tunes, some say, thirty-two; but the natives always told me the former number. Their singing is a low chant, with considerable sweetness, but little feeling or power. Painting has never been taken into the service of religion, and is very backward. They colour incomparably; but proportion and perspective are out of the question. They paint much on talc, of which the polish and transparency greatly heighten the effect of their brilliant colours. Sculpture, though so honoured by religion, is not in an advanced state. I never saw a specimen that would be tolerated in any European collection, except as a curiosity. In carving they have wonderful delicacy of hand; but with the same faults that vitiate their painting and sculpture.

The various castes, of which we have thus given a hasty sketch, dwell completely apart. The prohibition to intermarry is in itself a great gulf between class and class; and the separation is widened by the inability to eat together; for, so far are they distant, that a man cannot eat food cooked by a person of a lower caste, or served by him, or placed in a vessel he has touched. The peculiar stamp given to each caste by strict conti-

nuity in the same pursuit for many generations, parts them wider still. Two men may be born in one street, and may converse every day; but they are always strangers, beings of different species. In consequence, a man's affections, instead of being free for the whole community, are wrapped up in his caste. With the caste he rises or falls, is praised or blamed. The commonwealth may prove even vital changes, not one of which touches him; but you cannot place at stake the least interest of his caste, without awaking all his sensibilities. Hence much of what is constantly cited as their reproach,—a want of patriotism. It is not so much that they are destitute of feeling, as that the allegiance which other nations give to the commonwealth they give to the caste. In fact, their commonwealth is the caste, not the nation. "It is not my caste to fight or govern; and if those whose caste it is fail, why it is a pity; I am sorry to see the reins of power fall into new hands; but how can it be helped?" Such are the feelings with which a change of government is viewed. But attempt to touch the rights or violate the usages of the caste, and this same man will rush furiously to its defence. In such a case no resistance would be too wild to attempt; no miseries too hard to endure; nor would they be quelled till after ruinous overthrows.

Of all calamities that can befall a Hindu, the sorest is the loss of caste. This generally arises from some offence against ceremonial purity, or caste usage: such as the omission of established rites on occasion of a marriage, birth, or other important event; neglecting to sacrifice to ancestors; eating with a person of another caste, or out of vessels that had been used by them;

or abandonment of the caste religion. In the case of a Bramhan, drunkenness ought to be punished with expulsion; but that vice is rare; and I did hear of a wealthy Bramhan who practised it with impunity. Of the condition to which a man is reduced by expulsion, a competent witness thus speaks: "He is a man as it were dead to the world. He is no longer in the society of men. By losing his caste, the Hindu is bereft of friends and relations, and often of wife and children, who will rather forsake him than share in his miserable lot. No one dares to eat with him, or even to pour him out a drop of water. If he has marriageable daughters, they are shunned; no other girls can be approached by his sons. Wherever he appears, he is scorned and pointed at as an out-caste. If he sinks under the grievous curse, his body is suffered to rot on the place where he dies. Even if, in losing his caste, he could descend into an inferior one, the evil would be less; but he has no such resource. A Sudra, little scrupulous as he is about honour or delicacy, would scorn to give his daughter in marriage even to a Bramhan thus degraded. If he cannot re-establish himself in his own caste, he must sink into the infamous tribe of the Pariah, or mix with persons whose caste is equivocal."

Whether "the infamous tribe of the Pariah," the unhappy multitude who lie below the sacred line of caste, are the descendants of those who have been expelled from all the castes, or whether they represent an aboriginal race, crushed by a conquest too remote for any existing record, are points we could not determine, and need not discuss. But of whatever origin, they are

found all over India, divided into Pariahs and Chucklers; the latter, who find a wretched living by working in leather, being as much despised by the other out-castes as they are by people of caste. The out-caste may not live in the common street; and in some parts of the extreme south, he may not even walk the street where the Bramhans reside. He is forbidden the house of all the castes; but in some districts may enter that part where the cattle are lodged, and may even show his head and one foot inside the door of the family apartment. To touch him, to enter his house, to drink water he had drawn, to eat food he had cooked, to use a vessel he had touched, to sit down beside him, to ride in the same vehicle, or even to give him a drink of water, would be unlawful for a man of caste. He would take a proposal for anything of the kind as a mortal affront. The condition of an American or West Indian slave is worse than theirs only in one respect,—compulsory labour. But the slave may tread the same floor as his master, without polluting the whole house; he may enter the room where he sits, touch the dish he uses, sleep under the same roof, and prepare the food he eats. He is not made to feel that his step defiles a room; that his touch infects the purest wares; and that he carries in his own body, no matter how clean, a cursed incurable filthiness which fills with disgust all who have proper human sentiments. He has at least the privilege of a domestic animal. Above all, he may possibly die free; his children may be intelligent and respectable. But the out-caste has no hopes; no manumission can change his birth; he must bear his curse down to the grave; he must bequeath it to his children, who will bequeath

it in turn, and from generation to generation on it must go, nor can any power arrest it, except one, of which he knows not. Nothing can elevate the out-caste, till the Gospel has taught his neighbours to own his rights. Every Englishman would ten thousand times prefer being a slave, permitted some semblance of intercourse with the rest of mankind, and having a possibility of ransom, with the glorious prospect of leaving his children free, to being an out-caste, driven to live beyond the village-wall, hunted from every door, scorned by the most base, loathed by the most vile, and knowing that this malediction awaits his little ones.

The morals and the manners of this hapless race too well answer to the degradation of their lot. But Dubois's picture is overdrawn; I never saw anything that would warrant such language as, "There is a coarseness about them which excites abhorrence. Their harsh and rugged features betray their inward character." They are necessarily inferior in appearance to the caste people; but when received as servants into European families, and respectably clothed, many of them are well-looking and agreeable. Even in their most wretched villages they excite, not so much abhorrence, as pity. They are very miserable and very immoral. Their living is precarious: sometimes employed as scavengers, (for which the same writer holds them up to disgust,) sometimes as horse-keepers, porters, or messengers; for the most part labouring in the fields for three-half-pence or two-pence a day; often selling themselves for a term to a farmer, or reduced to a kind of slavery as payment of debt, they never venture to hope for aught but poverty and shame. When labour fails, charity lends no sub-

stitute; for, though I find, in the sacred books, directions for alms to out-castes, I never heard of such a thing taking place. The out-caste sees costly entertainments for beggars; but not one of these beggars would admit him to the honour of washing his dish, or dine in a room that his presence stained. Thus they are driven to eat all disgusting things: no sooner does a beast die, be the disease what it may, than a crowd of these hungry beings surround the carrion,—and even for carrion they have generally to pay. Crows, rats, snakes, reptiles, almost everything, is pressed into the service of destitute nature, and drunkenness follows to crown their shame and woe.

It is said that, on one part of the Malabar coast, a section of out-castes is so abhorred that they are not allowed to erect houses, only an open shed supported on four bamboos; and that they may not approach a caste person nearer than a hundred yards, but must give notice of their approach by a loud cry. To prevent the danger of contact, they are forbidden the highway.

It is difficult to estimate the number of out-castes; possibly they may be a tenth of the whole population.* If so, we have here TWENTY MILLIONS of human beings felled to the dust, and stamped upon by tyrannies almost incredible. Twenty millions, under the mild sceptre of England, who, though their neighbour be as poor, as ignorant, as vicious as they, dare not touch his hand, or enter his door! Twenty millions, who are held to be by nature filthy, and who, as the snail may not bound nor the jackal fly, so may not aspire to the society of man! It is sad. Christianity, her heart touched to see a

* Dubois says a fifth.

twentieth of this number bound in the West, drew their chain around herself, and, by the heaving of her breast, rent it in twain. But the chain of this Eastern bondage cannot be rent; it must be gently melted. A whole people must be taught before the out-caste may even venture to use the plea, by which the negro thrilled every Christian heart, "Am I not a man and a brother?" Oh what scorn and wrath would that plea, did he dare to use it, bring on the head of the out-caste! It would sound at present as a treason against all order and all nature. It would shock and revolt the whole community. He a brother! No, no; the frog may as well announce himself a lion, or the beetle claim kindred with the dove. England did a great and a kind deed when she lifted out of the dust a million of men, and built them a home on the rock of her own constitution; but she will do a greater and a kinder when, by the gracious help of God, she restores, to the frame of human society, those many millions who have been amputated and cast away, like a mortified limb.

European influence has already done much for the out-castes. They have been universally employed as domestic servants, a privilege never conceded to them by their own countrymen; have been admitted to the army; have in many cases obtained lucrative situations; while in mission-schools not a few have received the forbidden blessing of education. In large English settlements they are now raised above oppression on the part of the castes, though, of course, still subject to their exclusion. Lord Hardinge's ordinance, opening public employment to all who have qualified themselves by education, will in time much ameliorate their lot.

And as the character of the English becomes more known, their servants will be raised in general esteem. At first the castes, seeing that Europeans admitted Pariahs to their houses, and ate food of their preparing, regarded them with contempt, as belonging to the Pariah class. On this account, some writers strongly censured the English for so outraging the prejudices of the people. But English common sense does not honour prejudices that rob multitudes of their rights. The consequence will be, that the natives generally will learn to respect them more for acting on principles which their religion hallows; and at the same time the position of the out-castes will be insensibly elevated. But the influence of English life acts only within a narrow pale. All the British in India, soldiers included, are scarcely fifty thousand; if each of these improve on an average the condition of four out-castes, that is but one in a hundred of the twenty millions. That hapless mass have no hope but in the general spread of our Saviour's blessed rule; and, alas! as yet their Christian fellow-subjects are little informed of their numbers or their wrongs.

Roaming the country, and inhabiting the jungles, are several tribes who have no more relation with society in general than our gipsies. Among these the most notable are the *Lumbardi*, who stroll about with troops of asses laden with grain, the sale of which is their ostensible vocation. Times of war are their harvest-days; for they sell their services dearly as foragers, and reap loads of plunder. The whole family travels; they live in small tents, and enjoy a reputation perfectly unenvied. All forests are tenanted by inoffensive but miserable races who precariously subsist on roots and game.

Some of them are so wild as to have no hut; taking shelter in hollow trees and clefts, and even their women wearing only a few leaves.

The following touching sketch is from the pen of Dubois:—

"The day after lying-in, the woman is obliged to scour the woods for food. Before setting out, she suckles the new-born infant, digs a little trench in the ground for a cradle, where she deposits the naked babe upon the bare earth; and, trusting to the care of Providence, goes with her husband and the rest of the family to find wherewithal to supply the wants of the day. This is not quickly obtained; and it is evening before they return. From three days old they accustom the child to solid food, and, in order to inure it betimes to the rigour of the seasons, they wash it every day in dew collected from the plants; and until the infant is able to accompany or follow the mother, it remains in this manner, from morning to night, in the recesses of the wood, exposed to the rain, the sun, and all the inclemency of the weather, stretched out in the little tomb that is its only cradle."

In the various mountain districts, are tribes who differ in manners, religion, and language, from the people of the adjacent plains. The clans inhabiting the central woods and mountains are black and dwarfish, with features after the African type. But the aborigines of the southern hills are fine and robust men, of lighter complexion than those of the lowlands. The *Vishnu Purâna* gives this satisfactory account of the origin of the dwarfish central tribes:—King Vena had been slain for his impiety, when, his country being without a king,

disorders arose, whereupon "the sages consulted, and together rubbed the thigh of the king, who had left no offspring, to produce a son. From the thigh thus rubbed, came forth a being with the complexion of a charred stake, with flattened features, and of dwarfish stature. 'What am I to do?' cried he eagerly to the *munis* (sages?). 'Sit down,' said they; and thence his name was Nishâda. His descendants, the inhabitants of the Vindhya mountains, are still called Nishâdas, and are characterized by the exterior tokens of depravity. By this means the wickedness of Vena was expelled, these Nishâdas being born of his sins, and carrying them away. The Bramhans then proceeded to rub the right arm of the king, from which friction was engendered the illustrious son of Vena, Prithu, resplendent in person, as if the blazing deity of fire had been manifested." This is one specimen of the way in which every disadvantage of person or circumstances is ascribed to a defiled nature, and therefore made a reason for abhorrence.

The mountain and forest clans are now generally regarded as the descendants of an aboriginal race, antecedent to the Bramhans, who, rather than submit to the latter, took refuge in the natural strongholds of the country. It is, however, impossible for mountainous and woody retreats to exist without gradually receiving a thin population driven into them by war, the chase, and crime: and such a population must soon widely differ from their settled neighbours. A resemblance, however, is traceable in the language and usages of some of these wild tribes, inhabiting mountains very far apart, which countenances the opinion of a common

origin. The number of these savages is estimated by a well-informed writer, in the "North British Review," at eight or nine millions! India has so many nations, that even the chaff of their population is, in the eye of Christian philanthropy, of immense value. Here, in tribes of which many an Englishman, residing in India, never sees an individual, we have a population equal to that of Sweden, Denmark, and Holland. Adding those who roam in woods and hills to those who pine under the out-caste anathema, we have most probably a number of human souls as great as that in the British Isles. What a field for philanthropy!

It is now necessary that we should shortly glance at the morality of the Hindus. Here, Professor Wilson much objects to the evidence of missionaries; on this subject they ought not to be heard, because as a class they are of keen "moral sensitiveness," and are, moreover, "on the look-out for vice." This is as reasonable as to refuse, on warlike matters, the evidence of military men; that of civilians, on native jurisprudence; of engineers, on their public works: or of merchants on their commerce. It seems to us probable that the class who "are on the look-out" for facts on a given subject, will be, on that subject, the best informed. And as to the value of promiscuous evidence on the morality of the Hindus, I, as a very humble missionary, and though favoured with but a comparatively short time to study the natives, declare, without fear, that several of the opinions quoted by Professor Wilson, from the Parliamentary Report of 1813, would never have come from Hindus, unless they were the wary inhabitants of a Presidency, or were previously informed

of the importance that would be attached to their testimony. That I am not disposed to exaggerate Hindu faults, the foregoing pages testify; but it is useless to deny that many of the opinions quoted by the learned Professor, must pass, and in India will pass, simply as generous eulogies. That truth, as declared by Sir John Malcolm, distinguishes the Hindus, is a statement which every Hindu I ever asked plumply denied. Nor did I ever meet with an European in the country who hesitated to pronounce the natives universal and accomplished liars; but Europeans in the country are not, on such points, good judges; for, except their own servants, many know nothing of the natives. The people themselves, if interrogated upon their own veracity, or honesty, or chastity, as compared with those of other nations, might from vanity give a favourable reply; but if simply questioned as to the state of society, without any national references, they say to a man, that no one can be trusted in any case where falsehood would be of the least advantage. Nor is it necessary to repeat what every native talks of as a matter of course, and what every magistrate in India knows too well, that it is impossible to judge of a case in a court of justice by the evidence; for scarcely a witness can be found who will not swear according to his wishes; and any suitor may, for paltry bribes, procure whatever evidence he pleases; a facility which they seldom neglect. Ram Mohun Roy touches this point with much address, in saying, that the inhabitants of towns where courts are held fall in virtue far below the rustic population, and "are often made tools of in the nefarious work of perjury and forgery." The fact is, they con-

stantly seek employers for this nefarious work, and not one suitor in a thousand leaves the "innocent, temperate, and moral" villages, of which Ram Mohun Roy speaks, without being predetermined to spend every *pice* he can scrape in "making tools" for "nefarious work."

Intimately connected with lying is duplicity. In this they are adepts: their power of dissimulation passes all praise. Sully's portrait of our first James would not be too finished for even a common village Bramhan. They can sound forth compliments as absurd as to introduce Punch with a royal salute; and all the while look perfectly earnest and sincere. With this is coupled much servility; and even the Bramhans, though lofty toward all their inferiors, will cringe and flatter distressingly, when they have any point to gain with a superior. At the same time, those who pronounce all Hindus incapable of frankness, must either have maintained a bearing that did not encourage it, or must have been restricted to intercourse with the more feeble and timid nations of the low countries. The Mysoreans have much independency, and, treated with suitable respect and confidence, are capable of very great frankness, and even boldness. The same is said to be the case with the nations of the north-west.

Honesty is not in the main a Hindu virtue. Commercial honour must, of course, exist in some cases; but the mutual distrust shown in all transactions manifests a conviction that integrity is rare. As to the uprightness of persons in official situations, I never met with a native who would hear of it. They have solemnly assured me, that, if the most honest man on

earth accepted public employment, with the utmost resolution to maintain his rectitude, such is their skill in bribery, that before a twelvemonth he must be corrupt. How far this is true, I cannot say; all I can vouch for is that the natives firmly believe it. Yet you scarcely ever meet with a Hindu but is capable of professional honesty. If caste or personal interests are at stake, he can generally manage to keep his fingers pure. You may leave any article in your palankeen, even to your watch, and not one of the bearers will touch it; but if they are tempted by the fruits or vegetables of persons residing on their route, they use no such abstinence. Their dishonesty results not from a mere itch to steal, but from a want of moral principle. This is singularly illustrated by the fact, that at Trichinopoly no English family can keep their property safe without taking into pay a professed thief; but from the moment he enters their service, all they have is *tabooed;* he is not only honest (as to his patron) himself, but he is guarantee for his brethren, procuring again any article they may pilfer. At housebreaking they are most adroit. Without any noise they bore through the mud-wall of a native house, and carry off every article from the very apartment where the family are asleep. "In the dark they dig through houses, which they had marked for themselves in the day-time." (Job.)

Perhaps no country has furnished such powerful troops of brigands as India. The Pindarees, a band of robbers, who lived without wives, and recruited their ranks by capturing boys and training them, once mounted thirty thousand men. The Mahrattas, too, were only nations of organized and magnificent robbers.

It is also a familiar fact, that, in many, if not all, native states, bands of ruffians had license from the authorities to plunder, on condition that they observed certain limits, and paid a tax upon their booty! The horrors of *decoity* or gang robbery are portrayed by Mill, with a minuteness which shows that no savages on earth can perpetrate more cold or violent cruelties than the mild Hindu. Even to the present day our own government has much difficulty to suppress, in the northern countries, this cherished remnant of former times.

But of all the organizations to which Hindu brigandism gave birth, the most startling is that of the Thugs. These are a fraternity, composed both of Hindus and Mussulmauns, who agree to worship the goddess Kârli, and to spend their lives in presenting to her the greatest possible number of human sacrifices. They usually travel in gangs under the guise of merchants. In their noviciate they practise first as *grave-diggers*, disposing of the corpses of victims, and afterwards as *entrappers*, leading parties into the company of the gang. After due time they are initiated into the more honourable order of *stranglers*, who at a given signal cast over the head of the victim a noose formed on a handkerchief, and dispatch him in an instant. Higher than the strangler ranks the *guru*, who instructs novices in the art of strangling; and each gang has its sirdar, or captain. They proceed in all things by religious laws; never start on an expedition without favourable omens; and every murder is followed by a sacrifice to their goddess. The entrappers having led victims into the snare, a favourable place is chosen for a halt; the grave-diggers prepare the holes; the stranglers in the

mean time take their stations; at the signal the noose is thrown, and in a few minutes the bodies are so neatly buried that only a practised eye would suspect a grave. The existence of this fearful confederacy, which spread over all India, can be traced as far back as the eighth century. The confessions of some captured Thugs have been most astounding; not only as regards the number and address of their murders, but also for the firm conviction that their calling was religious, and that their trouble came only because they had neglected some rules of their sacred ritual.*

Benevolence is little understood by the Hindus, except in the form of hospitality to members of the same caste, and in that of aid to poor relatives; two points in which they are worthy of imitation. "A guest," says the *Vishnu Purâna*, "disappointed by a housekeeper, who turns away from his door, transfers to the latter all his own misdeeds, and bears away all his religious merits." So that the worse the character of the person refused hospitality, the worse for him who refuses. And again: "He who feeds himself, and neglects the poor and friendless stranger in want of hospitality, goes to hell." Throughout India a man travelling may count on a reception in the house of those of his own caste. Almsgiving also is strongly recommended in the Shastras, and much practised. But it is always for the benefit of the Bramhans, or those wandering monks who "subsist upon alms, and lead an erratic life of self-denial. They wander over the world to see the

* A clear and interesting account of Thuggee will be found in the "Edinburgh Review," Number CXXX.: as also in the works of its distinguished enemy, Colonel Sleeman.

earth, and perform their ablutions, according to rules prescribed by the Vedas." All alms are reserved for those gentlemen who choose the pleasures, or, as the Shastra has it, the "self-denial," of a life at once vagrant and sacred. But to those who are poor by birth, or by misfortune, to the widow, the orphan, the infirm, or the blind, charity is rarely extended. If the parties be of the same caste, they may have a claim; but within that limit sympathy is bound up; and to all suffering beyond it, the Hindu heart is deathly callous. A Bramhan would, without moving a muscle, pass an out-caste dying by the roadside, nor would he give him a drink of water to save his life. He would rather let the filthy wretch die, than pollute himself with his touch. The fact is stale, that while you find Bramhans supporting hospitals for animals and reptiles, you find nothing of the kind for men.

The Hindu has little active cruelty. He would seldom inflict pain for the sake of inflicting it: he would not, like Domitian, take the trouble of catching the fly for the pleasure of killing it. But he has an apathy which enables him to look on the most harrowing miseries without a pang. This natural apathy is increased by the joint influence of the caste system, the doctrine of transmigration, and their barbarous penances. Caste severs the cord of botherhood, by which every suffering man can draw the Christian heart to himself. "Who is that dying in the *tope* of cholera?" "Oh, it's a Shudra." This is quite enough: to say it was an eagle or a dolphin would not more effectually disengage the sympathies. Transmigration again shuts the heart against all sufferings from natural defects or heavy

misfortunes: these occur only as judgments for the vices of a former birth: if people are crippled, or blind, or bereaved, or left penniless, it is because they deserve so to be. These are just the infamous marks branded, by Providence, on those who ought to be abhorred. Their penances also often exhibit voluntary torments to us all but incredible, familiarity with which, and admiration of them, deaden the compassion for less severe, though involuntary, pains. Then the Hindu is remarkably impassive. Scarcely any other human being can bear fatigue, hunger and pain as he can. Bearers will carry a heavy traveller, in a heavy palankeen, forty miles in one night, and commence afresh the next evening. All these causes make the Hindu remarkably cold of heart. He will not go out of his way to torture human beings; but if revenge or the hope of gain stimulate him, he will do so to the utmost pitch, and as unmoved as if he were cutting sticks. His revenge once roused is unsparing and unquenchable. Coolly and yet furiously he pursues his victim: he will spend his last farthing at law rather than fail to ruin him; and many cases have occurred in which, to bring upon him public odium, he has starved himself to death.

On their matrimonial morality it is neither necessary nor desirable to enlarge. It is such as might be expected from those whose sacred books are feculent, whose divinities are patterns of license, some of whose rites are Bacchanalian, and some of whose idols are "a shame even to mention." The pictures of society usually given by the natives themselves are truly deplorable. Honour and purity, in any such sense as we understand them, they regard, if existing at all, as

only the attributes of rare and transcendent characters. Actual blamelessness they know to be frequent, but ascribe it not at all to principle, but wholly to surveillance. With the settled axiom, that evil is prevented only by lack of opportunity, society is so framed that one cannot but wonder how the icy peace left by such a system can ever be broken. But a few hours' familiar talk with the people of any country town, will painfully demonstrate that the prevalent disorder full often overleaps those walls within which conscious guilt seeks to preserve, for its own pride, compulsory innocence.

The temper of the Hindu is generally even. He lacks vivacity and fire. He is seldom giddy, seldom gloomy; for the most part, sedate and mild; but it is the mildness of apathy, not of benignity. He is avaricious of money; greedy to seize it, firm to hold; but little given to care. His apathy protects him from anticipatory troubles. With Europeans the warmth of domestic anxieties, and the changes in their social standing made by prosperity or reverses, are the springs of many cares. But as to the Hindu, his social position was immutably fixed at birth, and his family affections are moderate. Care therefore loses its sting. An eccentric prodigality chequers their habitual avarice. They will sometimes give amazing sums to erect or adorn a temple, to feast the Bramhans, or to reward the address of an expert flatterer. They have also a passion for fame, and are therefore sensitive to praise, and captivated with any project that will make men "mention their name."

The good points of Hindu character are mildness, temperance, hospitality, and submissiveness; the bad

points are falsehood, duplicity, apathy, selfishness, avarice, sensuality, and dishonesty. In point of gratitude, and a capability of becoming attached to their masters, the Hindus have been much belied. Considering their religious and moral instructions they are not below other nations in these particulars.

The Hindu mind is patient, fertile, and astute; close in application, prolific in fancy, and keen in discernment. It lacks breadth and fire. Its education narrows while it refines; its religion holds up to the heart no grand pure object; and its domestic affections are, like the feet of a Chinese lady, cased in iron from childhood, and ever retain a fixed and feeble stiffness. As a result, fervour and tenderness are not there. But give the Hindu an education large as known truth; a religion calling up his emotions to a stainless blessed God; a home where mutual love wants no chill protections; and then that mind of his will spread a broad wing, and take a bold flight in the upper ways of intellect. It is not likely that in any material enterprise they will ever display the rough energy of our harder clime. But in works of the mind, they will toil as hard, and build as high, as we.

Mr. Mill learnedly and elaborately argues that the Hindus are "a rude people." Professor Wilson repels the accusation. Bishop Heber pronounces them civilized. And Sir Thomas Munro avers that, "If civilization is to become an article of trade between the two countries, I am persuaded that this country will gain by the import cargo." Nothing can be plainer than this, that, if M. Guizot's principle be correct, that the main element of civilization is progress, then for many

ages the Hindus have been barbarians. But the Romans were more civilized under Nero, than under Numa, though making far less progress; and the New Zealanders are not so civilized as the Austrians, though at this moment advancing much faster. And though the Hindus, for several generations, have been either stationary or retrograding, they have not lost their civilization. Civilization supposes the order, the arts, and the enlightenment, necessary to the maintenance of civil life; of life in large and settled communities, as distinguished from wandering tribes, or ill-regulated clans.* These have from time immemorial been enjoyed by the Hindus, and produced their natural fruits,—elegance of appearance, polish of manners, and respect for learning. So far as perfect municipal order, regular agriculture, well-conducted commerce, ingenious manufactures, general arts, refined address, literary taste, high attainments in poetry, and respectable progress in science, constitute civilization, the people of India claim a place among the civilized. But in one essential they fail. Civilization is the art of social life. At the basis of all social organization lies the family. Civilization ought to begin by justly fixing family relations, and wisely forming family manners. Here Hinduism is at fault, but at fault only in common with every system on earth, except one. The Hindu is a civilized man in the street, the market, the shop, the office, the court of law; but the moment he enters his own door he is a barbarian.

We ought not to study even a stone merely for the sake of knowing what sort of a stone it is. We ought

* "Civilized, polite, urbane," all, from their derivation, convey the idea of city life.

to make its composition and its uses disclose to us somewhat of its Maker's wisdom, and teach us, like Him, to do our works that they may be useful. But to study men, merely for the sake of knowing what sort of men they are, is "a grand impertinence." It is heartless to inform ourselves of the customs of other races just with the view that, they when are spoken of by the travelled, or the well-read, we may be able to join in the conversation, instead of looking out of the window. Some labour much, as they say, for "a knowledge of human nature." To gain this, what jungles of fiction do they explore! But of the "knowledge of human nature" so won, we find small fruit, either in the increased wisdom or the increased philanthropy of those who, for the sake of this precious light, have endured such worlds of nonsense. All your knowledge of human nature is not worth a straw, unless it prompt you to benefit human nature. You may as well study bats as men, unless your knowledge lead you to do them good. To read of such a people as the Hindus, to be interested in their history, to admire their polish, to be entertained with their customs, to laugh at their absurdities, is all perfectly right. To wish, when they are spoken of, to be able to take an intelligent part in the conversation, is natural and wise. Do this: but do not stop there. Human homes and human hearts are not mere curiosities. They are sacred things. From the moment you become acquainted with them, a new duty opens before you,—the duty of doing all your circumstances permit to bless those homes and to cheer those hearts.

Regarding Indian society, think not the selfish

thought, What can I remember that is most interesting? Think the Christian thought, What can I remember that most needs amelioration? Think of the eight millions of wild men who haunt the woods and hills; think of the twenty millions of out-castes whose lot is vile and bitter; think of the two, or three, or four millions of widows, browbeaten and friendless; think of the homes of thirty nations where no common board is spread, and no fond circle twined.

CHAPTER IX.

INDIA: ITS RELIGION.

No one, acquainted with the religion of India, will attempt to reduce it to an harmonious system. Its sacred books advocate many conflicting doctrines; and its current opinions are varied by the local superstitions of ten thousand neighbourhoods. All, therefore, we shall attempt, is, to give a general idea of religion as actually existing, particularly on the points most pro-

minent in every religion that has any pretension to be called a system; namely, its standards, its doctrines, its morals, its ministry, and its ritual.

The STANDARDS of Hinduism are popularly stated to consist in four Vedas, six Shastras, and eighteen Purânas; but the term "Shastra" is also employed to denote all the sacred books taken collectively. This division differs from that of the Vishnu Purâna, and also from that generally furnished by the most learned. They speak of four Vedas, four Upavedas, or sub-Vedas, six Angas, and the Upangas, or sub-Angas, including theology, logic, law, and the Purânas. But in our remarks the popular division will be followed, as the more simple. Of all these writings, the Vedas are the most ancient and sacred. To elucidate the sublime mysteries taught in these, the Shastras have been written by a second inspiration, and by a third, the Purânas, further to unfold the revelation. All these books have never been collected, nor is it probable that such a collection can now be made. If it could, we have every reason to believe that no lifetime, however protracted, would suffice to read all the tomes. They are written in the Sanscrit, a tongue grammatically perfect beyond every other, and held by the natives to be the vernacular of heaven, never spoken on earth, nor permitted to descend, but to give mortals celestial teaching. The Vedas, and, I believe, also the Shastras, remain covered from vulgar eyes in the sacred tongue; but the Purânas are translated into the various Hindu languages, and circulated freely.

The names of the four Vedas are the Rig Veda, the Yajur Veda, the Sama Veda, and the Atharva Veda.

The Vishnu Purâna states that, "originally there was but one Yajur Veda," and that now "the branches of the great tree of the Vedas are so numerous, that it is impossible to describe them at length." The Vedas are considered not merely as a revelation from God, but are mystically identified with the Supreme Being himself. "He, composed of the Rig, Sama, and Yajur Vedas, is at the same time their essence, as he is the soul of all embodied spirits. He, distinguished as consisting of the Vedas, creates the Vedas, and divides them by many subdivisions into branches. He is the author of those Vedas: he is those aggregated branches: for he, the eternal Lord, is the essence of true knowledge." (Vishnu Purâna.) With such a theory, none but the most extravagant veneration would comport; accordingly, the Vedas are extolled above the gods, and the perusal of them is strictly forbidden to all mortals, but a priest in the line of direct succession from the creator's mouth. Those of the Rajah caste are permitted to hear them read; but the Bramhan who would utter a syllable of them in the hearing of a Shudra or of a European, or who would allow a line of them to fall into such hands, would commit a heinous sin. I shall never forget the horror of some Bramhans, upon seeing in our impure hands the transcendental syllables of the Gayatri, a prayer from the Vedas. But, in the present degenerate condition of Bramhanism, most, if not all, of these immaculate texts have come into the hands of our scholars. Only the Sama Veda, translated by Dr. Stephenson of Bombay, has yet appeared in our language. It will, no doubt, be eventually followed by

the others; and, in the mean time, affords much insight into the character of these books.

The antiquity of the Vedas is a point of much interest. Placed by the natives at a date antecedent to Adam, they were held, by our own earlier writers, to be at least five thousand years old. The Sama Veda was evidently written by persons knowing something of literature and arts, but leading a pastoral life. Frequent reference is made in the work to war and to chariots, showing the previous establishment of separate states, as also the cultivation of military art. The mention of poets as a class, of a golden cup, of habitual bathing, and of the preparation of intoxicating drinks, are all evidence of some degree of advancement. It is also evident that a sacrificial ritual had already been fixed, that mythological legends abounded, and that Bramhans were known; but the use of that appellation does not warrant the inference that it referred to persons closely resembling the hierarchy whom it now designates. The composition of the book being in several kinds of verse, further indicates a state of society somewhat cultivated. At the same time all the allusions to actual life are those of a pastoral people. The book never was written by persons who had been born in a city; for cows, milk, butter, horses, calves, and the like, are the ordinary materials for similes. Pure rusticity and some refinement are strangely combined. "Oh, worthy of all praise!" (Indra,) "let our encharistic songs fix thee as firmly as the charioteer is fixed in his seat, and let their symphony sound before thee like the lowing of newly-calved cows for their calves." The chariot and the symphony relish of civilization;

but a keeper of cattle was he, who for music found a likeness in the "lowing of herds." Dr. Stephenson draws attention to one passage, in which wealth is made to consist in "horses, cows, and barley," remarking that buffaloes, rice, and wheat, now so common in India, are not mentioned; and leading us to the inference that the Vedas were not composed in India, but in some more northern country, whence the Bramhans migrated at a period so remote as to lie beyond all discovered records. But the possession of rice and wheat would suppose an agricultural rather than a pastoral life; and in another passage, to express eminence, it is said, "As the buffalo is among horned cattle," so that the proper inference from the omission of that animal in an enumeration of treasures is, not that the enumerator wrote in a country where the buffalo was unknown, but that he wrote before it had been domesticated. Throughout the volume we find no reference to the sheep. Now, in all temperate countries, the wool of that animal makes it invaluable; and pastoral life never exists without it. Its absence from the Sama Veda affords, therefore, a strong presumption that the book was produced in India. The ocean also is referred to and invoked, clearly proving the writer to have inhabited a maritime country. Except the shores of the Caspian, none of the various regions to which scholars have pointed, as the probable birthplace of the Bramhans, would account for the maritime characteristics of the Sama Veda. Nor is it very probable that phenomena less grand than those of the Indian Ocean would lead to the exaltation of the sea into the same divine rank as the sun and the winds. The Rig Veda has an expression

which proves not only a maritime country, but marine commerce, "as merchants greedy of wealth approach the sea to embark."* Nothing is more evident than that, to the mind of the authors, rain was the chief want. *Indra*, "the personified clouds," is worshipped with copious devotions, as are also the other agents in regulating the supply of rain,—the sun, wind, and sea. This is rather in favour of an Indian origin, especially taken in connexion with the deification and worship of rivers. In this latter respect the Rig Veda is more explicit than the Sama, having the words, "I invoke the goddess, the waters, whence our cows drink: sacrifice is due to rivers."† Frost and snow are not alluded to; a circumstance strongly against any of the temperate countries north of India. Perhaps, also, a feather is cast into the scale in favour of the latter, by the mention of peacocks.

But whether composed in India, or in some trans-Indian country, the Vedas are plainly the production of an early age, in which life was pastoral, with scarcely any arts but poetry and war. Professor Wilson gives his high authority to the supposition, that they may date about thirteen centuries before the Christian era; a term which further investigation will more probably abridge than extend. But if it be nearly accurate, the antiquity of the Vedas is brought within rational

* *Oceanum veluti, proficiscendi caussa, mercatores divitiarum cupidi adeunt.*—Rosen's Latin translation of the Rig Veda.

† *Agnas deas invoco, unde vaccæ bibunt nostræ: fluminibus faciendum est sacrificium.*—Rosen. The words which follow show that the present notions of the natives on the medical value of water are not of recent origin: "*In Aquis nectar, in Aquis medicamen: Aquarum etiam ad laudem, sacerdotes! estote impigri.*"

bounds; and yet they remain the most ancient poems in existence, except the book of Job, which now appears to be proved with tolerable certainty to date higher.*

The translation of the Sama Veda is a happy circumstance. Not only apocryphal authorities, like Maurice, but many trustworthy writers, have ascribed to the Vedas much purity, sublimity, and wisdom. From this and other reasons, I took up the Sama Veda in strong hope of finding that those distant generations enjoyed, at least, the fading beams of patriarchal light. But that hope soon passed away, and I laid down the volume with sorrow. It is only a heap of hymns without coherency or sense, and woefully devoid of pure theology or morals. In fact, it is not conceivable that its authors ever intended it to assume the place of a revelation from God. It makes no such claim, nor does it declare the virtue to attend its persual ascribed by the Purânas to that of their legends. Comparing it with the Vishnu Purâna, you find that the latter has the air and the claims of a revelation, while the former has nothing of the kind. At the same time, no notice is found in the Veda of image-worship; but nearly all the myths which are elaborated in the Purânas, respecting the gods, are here referred to as accepted facts in religion.

The book, we have said, consists of hymns, which are those chanted at the moon-plant sacrifice. This plant (a species of asclepias) is full of acrid, milky juice, which, when expressed and allowed to ferment, becomes strongly intoxicating. This liquor is offered in libation to the gods; and such offering is the occasion on which these far-famed anthems are chanted. Dr. Stephenson

* See a recent volume entitled "Sacred Annals."

states that the sacrifice is accompanied with the death of a ram; but the Veda itself declares, "O ye gods! we slaughter no victim, we use no sacrificial stake, we worship by the repetition of sacred verse;" and Dubois, in his very detailed account of the sacrifice of the ram, makes no mention whatever of the moon-plant. It may therefore admit of doubt whether the Bramhans who communicated with Dr. Stephenson did not confound two distinct sacrifices.

Were the Sama Veda discovered by a European who knew nothing of its pretensions, he would take it for the effusion of some jovial bard, who, to honour his cups, had formed nature into a bacchanalian pantheon, and had sung his wassails on oriental plains covered with herds of kine. "Thou, O Soma!" addressing his potion, "art the embroiler of all things in thy drunken frolics. O moon-plant! those drenched with thy sparkling juice, in their inebriating cups slew the Rakshasa band." Again: "The supporter of the heavens about to become a liquid! the strengthener of the mighty gods, the intoxicator, the green, fugacious herb is not prepared in vain by holy men." Again: "O priests! we praise all day long that renowned foe-destroying Indra of yours, who gets muzzy on the sacrificial beverage placed in the sacred vessels." Again: "When in his cups, Indra siezes his adorable, easily-handled bow." And finally: "O Soma! purify for Indra the most sweet and richly-prepared spirituous liquors, the mighty, light-diffusing liquor. O lord of food, increase our provisions and our mighty renown! O god, mix the mid-day bowl beloved by the gods! praise and sprinkle on all sides, as you would do to a horse, the sacrificial

moon-plant juice, which procures salvation, runs through the world, is diffused through water, and purified by mixture with other liquids." Poets, no doubt, have often loved and honoured their cups; but neither Burns nor Horace extolled the potions yielded by his native hills, as does the author of these verses the "most inebriating juice," which "performs its frolics like the waves of the sea."

Besides its bacchanalian character, the Sama Veda has a fair amount of absurdities. We are told that "the ancient sages once trod the soil on which men now walk, and produced the sun for the purpose of giving light." Also, that *Agni* (fire) has "green mustachios;" and that the "heavenly cows, beloved of Indra, hurl the destructive thunderbolt." Then: "It is *Soma*, (moon-plant wine,) that yokes the horses of the sun, when he is about to move through the heavens over the abode of men." "Soma is my master," says the sun, "and yokes his gold-coloured horses to the chariot, for the purpose of departing." Nor does the following specimen of philosophy stand alone:—"This all-moving radiance proceeds from the east, and takes its seat in mother earth. Afterwards, the ever-moving body proceeds to father heaven. Its rays move within man, and from the higher vital air, extract and carry down the lower vital air, and the same mighty God enlightens the firmament. The manifestations of the sun in day and night, by their radiance, enlighten the thirty horal mansions, and the voice (of our chanters) sustains the solar manifestations."

On laying down the Sama Veda, instead of feeling, as I had hoped, assured that the truth Noah taught had

survived amongst the wiser and better portion of men at least to the date of the Vedas, I felt bitterly, that, were I to teach a Dyak or a Feejean to read, and put that book into his hand, I could not assure myself that it would give him one truth of theology, or one principle of virtue. But it would not be fair to judge the other three Vedas by the Sama: they may contain the wisdom and the sublimity of which we have heard; yet after such a disappointment, our expectation is naturally low. A considerable part of the Rig Veda has been translated into Latin by the late Dr. Rosen. It is also a series of hymns to the sun, fire, the soma-juice, the clouds, and the sea; the dawn also has more worship than she receives in the Sama; while the same references to cows and horses, with the same prayers for wealth and victory, abound. In some respects it is superior to the Sama; but in others it is more gross; and, on the whole, does not alter our estimate of the Vedas. The Atharva Veda is, on all hands, acknowledged to contain much that is of a magical character, intended to teach the method of destroying foes by incantation. The Bramhans who follow this Veda often conceal their knowledge of it from dread of the universal hatred against the "art that none may name." It then remains alone for the Yajur Veda to display the characteristics so confidently ascribed to these ancient writings, by authors of all schools. Awaiting its translation, I must confess, that the following testimony has now great weight, though before reading the two Vedas translated it seemed unaccountable:—"They have nothing but their antiquity to recommend them. They include all the absurdities of Hindu paganism, not only

such as it has originally been, but also the pitiful details of fables which are at present current in the country, relating to the fantastical austerities of the hermits, to the metamorphoses of Vishnu, or the abominations of the Lingam. I could easily prove my assertion by many passages extracted from these books, if my limits allowed me. The fourth of them, called Antharva Veda, is the most dangerous of all for a people so entirely sunk in superstition, because it teaches the art of magic, or the method of injuring men by the use of witchcraft, and incantation." (Dubois.) It is a matter of much importance, that every missionary going to India should possess and read the two published Vedas. They will, at a small expense of time, put him in possession of the real character of Hindu theology, and completely emancipate him from all impression that some bright deposit of truth may, after all, lie hidden in those much-venerated tomes.

The six Angas, or Shastras, are thus described in the Vishnu Purâna:—"*Shiksha*, the rules of reciting the prayers; the accents and tones to be observed; *Kalpa*, ritual; *Vyakarna*, grammar; *Nirukta*, glossorial comment; *Chandas*, metre; and *Jotisch*, astronomy." The same authority subjoins theology, logic, law, the art of government, medical science, archery, and the use of arms, with the arts of music, dancing, and the drama. These works, though some of them on subjects so little religious, are all invested with the authority of inspiration.

The eighteen Purânas, which alone are in general circulation, more fully express the actual faith of the Hindu than either the Vedas or Shastras. They con-

sist of cosmogony, mythology, and speculation, with attempts at history, which, however, are no more than genealogies and legends. No harmony of doctrine is pretended; for they openly advocate the rival claims of the gods Vishnu and Shiva, and on many other questions differ, yet all have a oneness in leading points of faith.

Professor Wilson is of opinion, that none of the Purânas "assumed their present state earlier than the time of Sankara Acharya, the great Saiva reformer, who flourished, in all likelihood, in the eighth or ninth century." From that period he traces the dates of several Purânas to the twelfth, fourteenth, and fifteenth centuries, saying that no portion of the Padma Purâna is probably older than the twelfth century, and that the last parts may be as recent as the fifteenth or sixteenth. Of the Vamana Purâna he says:—"It has not the air of antiquity, and its composition may have amused the leisure of some Bramhans at Benares, three or four centuries ago." Taking all the sacred writings together, the quantity is prodigious. The Purânas alone are stated to contain one million, six hundred thousand lines, and some statements raise the amount to ten, or even to a thousand, millions.

Of Doctrines, all systems of religion have three great sections: those respecting God, those respecting man, and those which, treating of the relations of the two, describe the way of salvation.

Respecting God, it is plain, from the Hindu scriptures, that the primeval doctrine of the divine unity has never been wholly lost. It is, however, equally plain, that even as early as the epoch of the Vedas, that truth

had ceased to possess the slightest value. With God's unity is coupled his infinity. These truths blend, and suggest each the other. Infinity, again, involves omnipresence, and omnipresence forbids the idea of any place where God is not. He cannot, therefore, be excluded from the space occupied by material bodies; but is as much in that which a mountain occupies, as in that above its head. To be omnipresent, then, he must be "all-pervasive." This word appears to be that by which the Hindu, from the earliest times, designated omnipresence. To persons untaught in physical science, it is hard to conceive of two things or two agents occupying the same space at the same time. Many a good man in England thinks he accepts a great mystery, when he believes that the space occupied by creatures should at the same time be filled by the Creator. But he forgets that even of sensible objects or agents, such as light, sound, odour, heat, and magnetism, four or five may pervade the same space, and each act, without in any way disturbing one another. Forgetfulness of this fact appears to have been the point whence the fathers of Hinduism commenced their fatal wanderings from the one true God. They believed him to be everywhere; if everywhere, he must be in everything; if in everything, how could he and the thing in which he was be distinct? they must be regarded as one. Thus God became everything, and everything became God. This is the very process of reasoning by which the Hindus now support their pantheism, and is probably that from which it originated. Once admit the doctrine that God is everything, and you may select any object whatever, and call it God. Such a selection would, at

first, naturally fall on objects presenting in themselves forcible displays of God's power and glory. Thus we find in the Vedas that the sun, moon, wind, clouds, ocean, and fire, are all identified with the Supreme Spirit, and all adored. And though the principle had not then, so far as we can learn from these books, received its last degradation by being applied to images; yet it had already descended far, when it could deify the intoxicating moon-plant juice.

We could not make so fully understood the views of the Divine Being contained in the Vedas, by any description, as by the following extracts. We first give a series of passages, addressed to, or referring to, *Indra*, that is, "the clouds:"—

"O Indra! there is no god thy superior, none more powerful than thou art: nor, indeed, O slayer of Uritra, is there one that can be put on a level with thee!" (Pages 36, 37.)

"O, thunderbolt-wielding Indra! were there a hundred heavens, and a hundred earths, and in addition to them a thousand suns, and any other supposable creatures, they could not contain thee; for thou encirclest heaven and earth." (Page 51.)

"Come close to us, O Indra! bringing with thee the aids resulting from sacrifices to the spirits of the departed. Come, O most felicitous divinity, with those most happy beings to whom we, in a special manner, offer oblations! Come, O great Father, along with the spirits of our fathers!" (Page 52.)

"We worship Indra, who ever slays his foes, and ever subdues them like a mighty hero, (Indra,) the great, the unequalled, the supreme." (Page 64.)

"This I am determined to execute through thy aid." (Page 64)

"Indra the supreme, who is but one, and whom no one dares speak against, bestows wealth on the man who offers sacrifice." (Page 204.)

"O, my friends! praise no other being than Indra; why would you draw on yourselves destruction?" (Page 207.)

"Thy internal vigour is great, thy prowess is all-powerful, and thy intellect sharpens thy illustrious Vajra. Heaven, O Indra, extols thy heroism, the earth publishes thy fame! thee the waters and mountains serve as their Lord. The mighty, all-preserving Vishnu, and Mitra, and Varuna, praise thee; thee also the powerful bands of Maruts delight." (Page 250.)

Did this stand alone we should deem it to contain a clear proof of the knowledge and worship of one only God; but how far this is the case we shall presently see. The reader will observe that Vishnu is here made inferior to Indra; a position directly contradictory to the now prevailing doctrine.

The next series of quotations is addressed to the sun, whose names are Mitra, Aditya, Savita, and Surya.

"Truly thou art mighty, O Sun: truly thou art mighty, descendant of Aditi, we adore the splendour of thy essence, thy majesty, and thy glory: for mighty art thou, O divine (sun)!" (Page 51.)

"I worship the god Savita, parent of heaven and earth, who superintends the sacrifices of the wise, who makes sacred rites to prosper, who bestows gifts, is altogether lovely by the possession of intelligence, and whose radiance from on high, through the words of the

wise, shines around the place of sacrifice, whilst the golden-handed performer of merit-conferring deeds proceeds to the heaven of mercy." (Page 88.)

"Let the glorious (solar) luminary drink the powerful spirit of the moon-plant liquor, and bestow upon the institutor of this sacrifice a life free from adversity. The luminary that is moved round by the aerial vortex, that preserves the world by its own might, and that nourishes all its inhabitants, and pours forth floods of light; the glorious, mighty, all-embracing, food-producing, unfading luminary, placed on the ground of the heaven-sustaining circle, the destroyer of the unfriendly slayer of foes, the exterminator of the injurious, the destroyer of the Asurs, and the slayer of our envious kindred, has been manifested. The all-surpassing, most excellent light of lights, all-conquering, and wealth-producing, is termed the mighty radiance. The glorious, radiant, mighty sun, sheds abroad his attendant, mighty, indestructible influence, to give light to the world." (Page 231.)

"Truly, O Súrya, thou art mighty! Truly, O Aditya, thou art mighty! And the might of thee, the mighty, (God,) is above all praise. O glorious divinity, thou art mighty through thy inherent might. Truly thou art mighty, O Súrya, through thy fame! Thou art indeed mighty, O brilliant god! Thou, by thy might art the destroyer of Asurs, and the instructor of the gods, whose radiance is all-expansive and indestructible." (Page 269.)

The honours of the ocean, under the name Varuna, are represented in the following extracts:—

"We, desirous of wives, and desirous of sons, ever

first to move the sacrifice, the givers of distinguished gifts, invoke (Saraswàn) the god Oceanus. Also let (Saraswati) the river goddess, beloved above beloveds by the sevenfold sisterhood, the much-extolled goddess, be praised by us." (Page 222.)

"O Varuna! hear this my invitation and have mercy on me: for I, desirous of thy aid, especially address thee. O rainer of felicity! what is thy persevering march with which thou comest to make us joyful? and what is that with which thou comest, bringing gifts to him who chants thy praise?" (Page 241.)

"O ye waters, be to us promoters of happiness, and stand on our side to procure for us provisions and highly felicitous foresight. Let your most prospering juices be ministered to us in this world with the readiness that affectionate mothers supply their infants. We cast you on (our bodies) with celerity, you who delight us by the destruction of our sins. Ye waters, also procure for us an (illustrious) progeny." (Page 277.)

Now follow the more exalted adorations of fire, AGNI:—

"O Agni, thou art to us the chief of the gods, our saviour, the conferrer of bliss, the subject of our higher praises." (Page 85.)

"O divine Agni, we light up thee, the shining, indestructible divinity. In whatever part of the heavens thy flame, worthy of all praise, emits its radiance, from thence do thou bring food for those that celebrate thy praise. O Agni, lord of light! the sacrifice, accompanied with sacred hymns, is being offered up to thee, the radiant god. O possessor of all joy, destroyer (of foes), lord of men, bearer away of the oblation, it is

being offered to thee! bring food to those who celebrate thy praise. O possessor of all joy, lord of men, thou receivest the oblation-presenting spoon and its cover both into thy mouth! O lord of strength, during the singing of the hymns, grant our desire, and bring food to those who celebrate thy praise!" (Page 164.)

"O Agni! I, Vatsa, wish to bring down thy spirit from the lofty, shining heavens. I wish to bring thee hither by a soul-delighting song. Thy eye is steadily fixed on many regions, and thou art the lord of all those regions; therefore we call on thee in all our conflicts. Desirous of food, we in all our conflicts call to our aid Agni, who possesses treasures accumulated in his wars." (Page 182.)

"O ye gods! cause your brilliant Agni, who is served by all the other fires, and is worthy of oblations, to assume his form of messenger in this faultless sacrifice: for he takes up his abode among men, is the receiver of oblations; whose brilliance is scorching, who is fed with clarified butter, and is our purifier. Uttering a noise like a horse when satisfied with grass, the mighty divinity, breaking over his bonds, fixes himself in some suitable place; and thou, O Agni, thy brilliance, following the course of the wind, moves along, and the road thou followest is darkness." (Page 188.)

"We worship the deity who, even among the gods, is worthy of admiration, the inviter of the gods, the immortal, the carrier on of the sacrifice to perfection; the preserver of liquids, possessor of brilliant treasures, the all-resplendent Agni, encompassed with surpassing radiance." (Page 215.)

"O Agni, thou art the head of the gods, overtopping

the heavens, resembling the eminence on a bullock's shoulders; the lord of earth, the inspirer of delight into all animate and inanimate beings. O Agni, lord of heaven! thou art the lord of wealth, worthy of being praised and of being bestowed. It is thou that bestowest happiness; let me, then, be the celebrator of thy praise. O Agni! thy pure, white, shining rays urge onwards thy brilliant flames." (Page 233.)

Possibly it may interest geologists to learn that Agni is, according to the Rig Veda, *caput cæli, umbilicus terræ*, —"the head of heaven, and navel of earth." Can this be an allusion to central fires?

The next strange deity is *Soma*, the moon-plant wine.

"O, mighty Soma, father of the gods, all-diffusive as the sea, do thou come to this holy place!" (Page 82.)

"That saving moon-plant, by its stream of pressed sacrificial viands, makes us pure. That saving moon-plant makes us pure." (Page 84.)

"Soma is being purified: he is the father of intelligences, the father of heaven, the father of fire, the father of the sun, the father of Indra, the father even of Vishnu." (Page 98.)

"O Soma, rainer of blessings, thou art glorious! O rainer of blessings, brilliant deity, thou art the producer of rain, thou art the supporter of religious rites! O rainer of blessings, thy might causes rain, thy juice causes rain! and, O rainer of blessings, thy person causes rain! Thou, O rainer of blessings, makest a noise like that of a horse! O Soma, send us cows, send us horses; open to us the door of wealth." (Page 129.)

"(O Soma), lord of incantations, thy holy essence is

everywhere shed abroad! O author of being, thou encompassest every member all around! It was through his wisdom that the wisdom-possessing gods performed the act of creation, and the men-surveying patriarchs established the race of man." (Page 142.)

"Soma is flowing down pure; he is the creator of intellect, the creator of heaven, the creator of earth, the creator of the sun, the creator of fire, the creator of Indra. Soma, when he goes sounding to the holy place, is Bramha among the gods, the fixer of their respective merits among the poets, the Rishi among the Bramhans, the buffalo among the horned animals, the hawk among the vulture tribe, the sword among cutting instruments. Soma, the pacifier, with vibratory motion, inspires us with songs and soul-moving hymns, sending forth as rivers a flood of sound. Soma, who was the inward soul, and is the rainer of felicity, sits down among us, with his unmatched strength, and is well skilled in the matter of cows." (Page 162.)

Here we perceive, that though both Indra and Agni had been honoured with the assurance of their being supreme among the gods, the same distinction is conferred on "the juicy god," as the poet calls his beloved Soma. The wind also, under the name Váyu and Maruts, has his praises and his prayers.

"Confer on us for our preservation, an intellect for obtaining cows, horses, food, and heroes."

"O (Maruts), heroes possessed of substantial might, grant his desire to the hymning, sweating, moving chanter." (Page 243.)

O Váyu! I, rendered glorious by the performance of sacred rites, and desirous of heaven, come to thee the

first with the sweet moon-plant juice. O god! worthy of all regard, come to our moon-plant banquet, drawn by thy million of horses! O Indra and Váyu! ye are worthy to drink of that expressed moon-plant juice; for the streams of liquid flow together naturally unto you as waters into a pit. O Váyu and Indra! mighty, and the lords of might, do ye come to the moon-plant banquet for our protection, in your chariot drawn by a million of horses." (Page 248.)

"O wind, let thy soothing, delicious medicine enter our breasts, and do thou greatly extend our term of life! O wind, thou art to us even as a father, even as a brother, to us even as an intimate friend. Do thou work with us for the preservation of the life-preserving sacrifice. O wind! bestow on us, to afford us a living, a portion of that unfailing (wealth) which is in thy house carefully stored up." (Page 279.)

Nor is the dawn overlooked in the general lavishing of worship.

"The goddess Aurora, in the form of the dawn, comes from the distant regions of the moon to this nether world, and diffuses her splendour all around." (Page 39.)

"O brilliant Aurora! enlighten our minds as thou hast enlightened us in times past, that this day we may obtain much wealth. O thou of glorious origin, by whose aid we obtain horses, (favour me,) Satyasvaras, son of Vajya! O recipient of praise, bringer of brilliant desires, destroyer of darkness, daughter of heaven, powerful goddess! give us a place of abode." (Page 262.)

"These intelligence-giving rays of morn spread light over the eastern aerial region; and the morning, crea-

tive, generative, warming rays, march forth like strong men arrayed in armour. The resplendent rays proceed forward with freedom, and, self-yoked, the glorious beams unite themselves (to the chariot). All intelligences awake with the morning, and the before-mentioned rays of the brilliant (goddess) pay their respects to the radiant sun. The sacrifice-receiving Aurora is worshipped by one effort, even from afar, and brings food without fail to the pious, bountiful master of the moon-plant banquet." (Page 265.)

After these quotations, it will be obvious that, at the time when this book was composed, the doctrine of God's unity, with the cognate truths of his infinity, omniscience, and omnipresence, had become so corrupted as to have lost their identity. A source of being is mistily conceived; but the personality of that source is so completely lost, that any object may be honoured with the supreme name. We have here no clear idea of a Being whose nature so differs from that of all created things, as to forbid the thought of his fusion or identification with any,—a Being who, in his essential personality, pervades all, sustains all, directs all, yet remains distinct, as the vital air from the animal frame, or as the magnetic principle from the metal where it could not be discovered a day ago, but which it is pervading now.

On the surface of these quotations, it would seem as if several supreme beings were recognized; but the meaning probably is, that each adorable object is declared supreme, because identified with the First Cause, and therefore with the other objects of worship; as, for example, "Agni is radiance, and radiance is Agni;

Indra is radiance, and radiance is Indra; the sun is radiance, and radiance is the sun." The deities are also invoked by couples or trios:—

"Let me have all the glorious, irresistible aids of the mighty trio,—Mitra, Aryamá, and Varuna. (Page 33.)

"O ye priests, celebrate Mitra and Varuna in songs at the height of your voice, and do you both, possessed of great strength, come to the long-continuing sacrifice. Ye who are the universal lords, the womb of the waters, yourselves divinities, and mighty among the gods." (Page 179.)

Even in these extracts proofs appear, which are abundantly increased on reading the entire volume, that those by whom it was composed received a system of mythology comprising gods and goddesses, celestial broils, and celestial excesses. Nor is even pantheism consistently preserved, for some of the divinities are less distinctly pronounced supreme than others; whereas were each one equally the Eternal, no gradations could exist. Though image-worship is not sanctioned, animal-worship is so very clearly, in this prayer to Garuda, the sacred vulture:—

"O Garuda, the men whose breasts are filled with devotional feeling see thee while moving thy wings gracefully in the heavens, as thou art radiant like gold, and the messenger of Varuna, art the bird that producest in the womb of Yama the all-enthralling (Agni), and art the nourisher (of men). The water-preserving, aloft-going Garuda takes his station before us in the heavens, lays hold of his variegated armour, and covering himself with his own glorious plumage, like the sun, to await our reverential view, he gives to the

adorable, beloved (showers of rain). Covered with watery drops in the heavens, and shining with the light of the water-collecting sun, he goes to the fluid-receiving (cloud); and the sun, shining with his white radiance, produces through the three worlds the delightful (rain.)" (Page 278.)

Upon the subject of the Divine nature the Purânas do not materially diverge from the Vedas; except that according to the sect of the authors, now Vishnu and now Shiva is declared to be supreme. In the Vishnu Purâna, the one lesson inculcated is, that all the universe is not one existence save Vishnu alone. "Thou art sacrifice, thou art oblation, thou art the mystic Omkara, thou art the sacrificial fires; thou art the Vedas, and their dependent sciences; thou art, Hari, the object of all worship. The sun, the stars, the planets, the whole world; all that is formless or that has form; all that is visible or invisible; all, Purishottama, that I have said, or left unsaid: all this, supreme, thou art." (Page 29.) In another page we read, "Gods, men, animals, birds, reptiles—all are but forms of one eternal Vishnu, existing, as it were, apart from himself." In another passage Bramha addresses Vishnu thus: "O thou who art distinct from holy writ, whose double nature is twofold wisdom, superior and inferior, and who art the essential end of both; who, alike devoid and possessed of form, art the twofold Bramha, smallest of the least, and largest of the large; all, and knowing all things; that spirit which is language; that spirit which is supreme; that which is Bramha, and of which Bramha is composed! Thou art the Rig, the Yajur, the Sama, and the Atharva Vedas. Thou art accele-

ration, ritual, signification, metre, and astronomy; history, tradition, grammar, theology, logic, and law. Thou art inscrutible. Thou art the doctrine that investigates the distinction between soul and life and body, and matter endowed with qualities; and that doctrine is nothing but thy nature inherent in and presiding over it. Thou art imperceptible, indescribable, inconceivable, without name, or colour, or hands, or feet; pure, eternal, and infinite. Thou hearest without ears, and seest without eyes. Thou art one and multiform. Thou movest without feet, and seizest without hands. Thou knowest all, but art not by all to be known. He who beholds thee as the most subtle of atoms, not substantially existent, puts an end to ignorance; and final emancipation is the reward of that wise man whose understanding cherishes nothing other than thee in the form of supreme delight." It is here manifest how consistently the doctrine of pantheism is pushed to all its consequences, however revolting or absurd; and even among the most ignorant of the people, similar views prevail, thou vaguely conceived, and held with a thousand inconsistencies.

The common statement, that the Hindus have neither temple nor worship for Para Bramha, the great First Cause, is correct; and yet it conveys an impression beyond the truth. Para Bramha is a virtual nonentity, existing for ever in profound sleep, unaware even of his own existence. The expression of the last-quoted passage, "the most subtle of all atoms, not substantially existent," hints at this view of his nature; a view not well consisting with pantheism. To this inconceivable abstraction it is impossible that worship should be ren-

dered. But the Shiva worshipper holds Shiva to be supreme, and the Vishnu worshipper holds Vishnu to be supreme, each regarding the homage paid to these gods as paid to Him who is all and all.* The pantheistic principle, first employed to deify the great agents of nature, is thus secondly applied to imaginary celestial beings, and finally subserves the vilest idolatry. He who believes that birds and reptiles are only forms of the Supreme, may readily adore the vulture or the snake.

With all their folly, it will be observed that some of the pasages cited nobly express the divine glory. In what follows this is still more conspicious. "We bow to him whose glory is the perpetual theme of every speech; him first, him last; the supreme Lord of the boundless world; who is primeval light; who is without his like; indivisible and infinite; the origin of all existent things moveable or stationary." How readily and happily should we conclude that the writer of this really knew the truth of one glorious eternal Spirit! But the very next sentence is to this effect:—"To that supreme being who is one with time, whose first forms, though he be without form, are day and evening, and night, be adoration." This (and countless citations more humbling still might be made) shows that terms which to us convey large and glorious conceptions of

* Voltaire, with his usual acuteness and spite, replies to the accusation of not worshipping the Supreme, which had been made against the Hindus by Romish priests: "What could Chinese, Tartars, Arabs, Persians, Turks, think, if they saw so many churches dedicated to St. January, St. Anthony, St. Francis, St. Fiacre, &c., and not one to the lord of nature, the supreme essence by whom we live?"—*Fragm. sur l'Inde.*

what God is, are used by the Hindu without any corresponding idea. Perhaps Mr. Mill errs in ascribing the *origin* of such terms to the love of flattery; and certainly his opponents err in arguing that the *use* of the terms implies the existence of their appropriate ideas. The terms are proof that at one time true ideas of God sought and received true expression; but the use of those terms now does not prove that the primitive ideas are preserved; it only proves that those who employ the terms have an impression that they are laudatory and acceptable. My own observation would lead me to say, that among the people (and even the few passages of the sacred books cited, will show that in them also) these lofty appellations much resemble the title "Maha Rajah," on a letter to a Mahratta accountant or tailor. The correspondent has no idea of asserting that the accountant or the tailor is a great king; but he wishes to be polite, and therefore uses the royal title, without for one moment thinking what it means. So, in sounding epithets in praise of Vishnu or Saivh, the Hindu means to be as laudatory as possible; but as to the words, they are words of air.

One of the many points in which Hinduism is inconsistent with the fundamental dogma of Pantheism, is the recognition of a triad,—Bramha, the creator; Vishnu, the preserver; and Shiva, the destroyer,—who rule heaven and earth, men and gods. Respecting this triad many theories exist. One declares them to be only Para Bramha manifesting himself now in creation, now in preservation, and now in destruction. Another proclaims Shiva head and source of the triad and of all things, Bramha and Vishnu being only his subordi-

nates. A third claims the reversal of this order in favour of Vishnu; and a fourth declares that the whole triad are only the first created and highest of creature-gods, who are charged with the care of the universe while the First Cause enjoys his sleep.

Bramha, the creator, has a vile and disastrous history. The only references to him which I remember in the Sama Veda are the following, in which the epithet "first-born" seems to designate him, rather than Para Bramha:—"The first-born glorious Bramha has, from of old, shed abroad his brilliant rays to the utmost bounds of space, and now sheds them abroad to the regents of all the different points in the heavens, which are the reducers to form of this world, and everywhere residing in the wombs of truth and falsehood." (Pp. 60, 61.)

In another place, "Bramha among the gods," is a mark of eminence. His office is not only creative but also rectoral, he guards the holy Vedas without which neither heaven nor earth could stand; and as each child is born, he predestinates all its acts of piety or crime, with its portion of sorrow or happiness, writing the whole upon its forehead. For an unpardonable domestic offence against Shîva, one of his heads was cut off, and for another still viler, he was cursed so heavily that he has not been since honoured with the temples or the worship, according to the other gods. Yet on certain occasions sacrifices are offered to him; and in some neighbourhoods he has temples.

Vishnu is honoured even in the Sama Veda, with the title "All-preserving," and in one passage is referred to in a way that places him above Indra. Yet the latter

receives, throughout the work, a thousandfold more honour than Vishnu, who is declared worthy of respect, because he is "the intimate friend and companion of Indra." But in Hinduism as now existing, Indra is a second-rate god, while Vishnu shines in the Triad. As preserver, it has frequently become his duty to suffer incarnation. The first was the *Matsya* (fish) *Avatâra*, or incarnation. In a drowsy fit Bramha had let the Vedas escape. On their flight they were siezed by a giant, who, to retain his prize, dived to the bottom of the sea. To repair the fatal loss, Vishnu became a fish, hasted to the depths where the giant lay, penetrated into his body, and thence bore away the celestial treasure. The second was the *Kurma*, or turtle, *Avatâra*. The gods, desirous of maritime discoveries, embarked on a craft such as Lloyds never registered, namely *Mundara Parvata*, a huge mountain. Their bark began to sink; they, at the point of drowning, cried to the great Preserver, and he, to rescue the immortals, became a turtle, dived into the sea, placed himself under the mountain, and heaved it up with his back.

The *Varaha*, or boar, *Avatâra*, followed. A giant had become so dangerous that his destruction was necessary. But he was ensconced in the lowest of the seven lower worlds. Vishnu, to reach him, became a boar, and with his snout scooped a passage through the earth, and right down to the infernal regions, where he slew the giant. The Vishnu Purâna differently relates this *Avatâra*, saying that its object was to raise the earth out of the waters. "The mighty boar, whose eyes were like the lotus, and whose body, vast as the Nila mountain, was of the dark colour of the lotus leaves,

uplifted upon his ample tusks the earth from the lowest regions." We are further informed that the sages "sought for shelter among the bristles on the scriptural body of the boar, trembling as he rose up supporting the earth, and dripping with moisture." This boar was not made in good proportion, for we are told in another Purâna, that he was ten yojanas in breadth, and a thousand thousand high; that is fifty miles, by five thousand.

The fourth was the man-lion, *Avatâra*. A devout servant of Vishnu had a father opposed to his worship; and who, one day contending with his son, denied the omnipresence of Vishnu, and striking a pillar declared he was not there. The preserver issued from the pillar as half a man, half a lion; tore open the infidel's body, sucked his blood, and made necklaces of his intestines. Then came the dwarf-Bramhan, or *Vamana. Avatâra*. Bali, a giant to whose depredations the Rig Veda often refers, had reduced the gods to great straits. Vishnu appeared before him as a pigmy Bramhan, soliciting as much ground as he could cover with three prints of his tiny foot. The giant, amused at the request, granted it. Vishnu instantly dilated to vast proportions, with the first step covered all the earth, with the second all the space between earth and heaven, and, having no place for the third, he laid it on the head of Bali, crushing him through the earth to hell. This *Avatâra* is plainly referred to in the Sama Veda. "This Vishnu, when he made his tour of the world, put down his feet but three times, and covered all the earth with the dusty sole of his foot. Vishnu, the preserver, the in-

defatigable, made the journey in three steps, and thus upheld the performance of sacred rites."

The sixth *Avatâra* was *Parusha Rama*, a heroic man, victor in dreadful wars. The seventh was *Rama Chandra*, whose conquest of Ceylon, by an army of monkeys, was sketched in a former chapter. These two *Avatâras* were contemporary, and being mutually ignorant that each was the great Vishnu, went to war the one with the other. The eighth *Avatâra* was *Bala Rama*, who with a mighty snake destroyed hosts of giants. The ninth *Avatâra* was into the *Arali* tree, and was assumed for the same purpose as the golden shower. The tenth, which has not yet occurred, is to be in the form of a horse.

Besides these nine *Avatâras*, that of *Krishna* is celebrated at great length in some of the Purânas; and all India resounds with ballads commemorating his mirth, his might, and his licentiousness. I have remarked, at least, three instances, in which the Rig Veda mentions Krishna; but they are obscure, leaving it very doubtful whether the same personage is intended. At page 205, Indra is commended for having "killed the women pregnant by Krishna, the Asura, or giant."* This looks very like an allusion to the husband of sixteen thousand wives. But this being placed among the giants somewhat obscures it; though at pages 246 and 248, the Asvini are praised for having restored a lost son, Vishnapvan, to his father, a son of Krishna. Thus, while in the one case merit attended the destruction of his offspring, on the other it attended their preservation.

* *Mulieres, a Krishna, Asura gravidas, necavit.*—Rosen.

One trait in the character of the Preserver is very remarkable. Hinduism carries the doctrine of supererrogation to such length, that ascetics may gain merit, not only sufficient to cover their own sins, and to benefit other mortals; but sufficient also to give them fearful powers, which, at discretion, may be turned against the gods. When one of these holy men threatens the celestials, nothing can rescue them, but to deprive him of his merit by leading him into sin. Thus, in order to seduce men of transcendant piety, the Preserver has several times become a teacher of error. Of these abominable missions, the Purâna wholly devoted to the praise of Vishnu supplies the following example. The gods after a severe defeat pitiously appealed to Vishnu, saying: "Have compassion on us, O Lord, and protect us who have come to thee for succour, from the Daityas. They have seized upon the three worlds, and appropriated to themselves the offerings which are our portion, taking care not to transgress the precepts of the Vedas. . . . . Engaged in the duties of their respective orders, and following the paths prescribed by holy writ, practising also religious penance, it is impossible for us to destroy them. Do thou instruct us in some device whereby we may exterminate the enemies of the gods." When the mighty Vishnu heard their request he emitted from his body an illusory form which he gave to the gods, and thus spake: "This deceptive vision shall wholly beguile the Daityas, so that, being led astray from the path of the Vedas, they may be put to death; for all gods, demons, or others who shall be opposed to the Veda, shall perish by my might, whilst exercised for the preservation of the world. Go then,

and fear not: let this delusive vision precede you; it shall this day be of great service to you, O gods!" In the case of Devodasa, given by Dr. Wilson, of Bombay, Vishnu is at much pains to corrupt the holiest of mortals; and at length succeeds.

Of SHIVA, the Destroyer, it is not possible to say much without citing impurities better avoided. Wrath, lust, and filth, are the sum of his character. In one of his wars, Mandara Purvata (the mountain on which the gods embarked) was his bow, a vast serpent the string, Vishnu his arrow, and for a shield, having split the earth asunder, he took one half. His repeated crimes brought upon him curses manifold, and, some of them, unmentionable. His dwelling was among the ashes of the dead, his avocation begging, his robe a tiger's skin, his alms-box a human skull, and his rosary a string of skulls. Among his names are the "Furious," the "Hide-clad," the "Ugly-eyed," and the "Devil-king." Upon his character all the vices have exhausted their imagination; and yet, overflowing with impurities as that character is, his worship is the most ancient of the sectarian divisions in India, and perhaps even yet, the most numerous. His office is to destroy all things; an event frequently occurring, according to Hinduism; occurring, indeed, whenever Bramha takes a sleep.* He seems to be fully recognized in his character of Destroyer in the Rig Veda. "Slay not, O Rudra, (Shiva,) our old, nor our young, our unborn, (*generans*,) nor our newly-born, our father, nor our mother; nor afflict the

* I do not attempt to give a view of Hindu cosmogony, as it would require much space, and is not a necessary part of their religion; though necessarily involving the credit of the Shastras.

bodies we love! In son, in grandson, in kinsman, in cows, or in horses, chastise us not; nor in anger smite our men, O Rudra! . . . . . Far from us be thy weapon which slays cows,* and slays men, O Destroyer of men! Be felicity accorded to us of thee; favour us, and undertake our cause, O god! O give us salvation!"

Each of the Triad has a heaven of his own; Indra too, has a heaven, and several heavens beside are mentioned. These abodes are thronged by three hundred and thirty millions of gods; in whose character is neither grandeur nor worth. They luxuriate in crime, and are frequently worsted in battle. Krishna called them "the vile and contemptible denizens of heaven," and also "the evil-minded and unprincipled gods;" terms admirably characteristic. These gods are considered immortal; but not properly divine; except, indeed, as any object may be identified with the supreme spirit, and so be called divine. In the Canarese, and some other Indian tongues, though not in all, they are not called *Deva*, the name "God" as applied to the Triad and a few others; but *Devita*, "little gods," *dii minores*. You cannot, however, find two Bramhans who agree as to the number of celestials entitled to be called *Deva*. Of course it is not attempted to give a catalogue of the *Devita;* and only a few, comparatively, receive separate worship. At certain ceremonies, and in urgent distress, they are invoked in mass.

Perhaps it may admit of doubt whether any of the gods receiving separate worship belong properly to the class of *Devita*, and whether they are not all of other

* "*Vaccans necans;*" this I take to be a misprint for *vaccas*, and render it accordingly.

orders; being either deified natural agents, deified men, deified animals; or else imaginary regents governing certain provinces, as Kumâra, "God of war," and Vignayshvara, "God of difficulties." If this be correct, then the three hundred and thirty millions come from a corruption of the patriarchal doctrine of angels; and to furnish the pantheon of divinities separately adored, three processes have been employed;—PERSONIFICATION, applied at will to any inanimate object, even so low as moon-plant wine, but especially to the nobler ones, as the sun, moon, ocean, &c.: APOTHEOSIS, exercised not only on men, but also on beasts, birds, and reptiles; and INVENTION, resorted to when any class of facts had been observed, and it was deemed necessary to assign them a director. Such conceptions as Virgil's Fame, or Ovid's Envy, if put forth, in India, by good authority, would be generally accepted as models of goddesses. From conceptions similar, if not in poetry, at least in principle, have sprung the host of official gods; a class which includes even the Triad.

The debased and polluting idolatry to which these doctrines naturally lead, has been illustrated at length in former pages. It is now, therefore, only necessary to recall the fact, that the fair and spacious continent of Hindustan is inundated with idols—idols of from the size of an elephant to that of a bee; of every material, from gold to clay; and of every form, from monster to reptile—idols in which all decency is outraged, and all modesty decried—idols which meet you at every turn, until you are ready to repeat the old satire on Athens, that it is more easy to find a god than a man. Then, with these loathsome claimants of divine honours are

associated trees, hills, waters, kings, husbands, priests, and patrons, cows, birds, snakes, and monkeys, and even implements of handicraft. Nor are these debasements confined to the ignorant and low. In the Vishnu Purâna we are told, that Krishna utters the following sentiments:—"Practical science is agriculture, commerce, and tending of cattle. . . . . Thus the knowledge of the means of support is threefold. The object that is cultivated by any one should be to him as his chief divinity; that should be venerated and worshipped as it is his benefactor. . . . . We then" (he was a cowherd) "are bound to worship the mountains and to offer sacrifices to cattle. What have we to do with Indra? Cattle and mountains are our gods. Bramhans offer worship with prayer; cultivators of the earth adore their landmarks; but we, who tend our herds in the forests and mountains, should worship them and our kine." (Page 524.)

Painful as is the darkness of the Hindu on the natural attributes of God, it is more painful still respecting His moral glories. Whether we take one god or another, celestial life or terrestrial incarnations, the primitive Veda or the modern Purâna, in all we find the revolting alliance of divinity and pollution. It is safe to say that in the Purâna legends of the amours, envies, and errors of the gods, we have, from the creator down, a record of turpitude far exceeding that of any prison in existence. Deeds we should blush to name, are sung in lofty verse, and as the performance of glorious godhead. To excuse these monstrosities we are told that as to God "no actions affect him." Were it not that our eyes have light from above, this answer might blind

us, as it does the astute Hindu, and like him we might forget that it is not the action which affects the agent; but the agent who affects the action, displaying his own character in the character he gives to his deeds. Laboriously and painfully does the Hindu set himself to prove that actions which in himself would be culpable, are in his god, wise and pure. This one fact forcibly illustrates two Scriptural declarations; namely, that the heathen know not God; and that they have a law written on their heart. In their ignorance of God, they forget that principles too vile for man, cannot be those of the Eternal; and by the law written on their hearts, they feel that to copy the supposed divine example would involve guilt. The truth that a clean thing cannot be brought out of an unclean, has a sorrowful evidence in the fact that every effort of the human soul to evolve, independent of revelation, an idea of God, has only produced a huge being of eccentric power, and blemished morals.

The idea of God as taught in the Shastras, is lamentably entangled and obscure; but as existing in the popular mind is even more so. They say, "God is one;" but when asked Who? or, Of what character? some will reply, "the god at Shivagunga;" some, "Hanamunta;" some, "Goobbee Appa;" some, "Runga," and so on. With the more intelligent the proposition, "God is one," is only the first of a series of propositions of which the last is, "There are gods many and lords many." One class, if they could analyse their reasoning, would state it thus: "God is one: this one Being is supreme; the Supreme must be perfectly happy; to be perfectly happy, he must be free from all care; to

be free from all care, he must be unconscious: therefore God is free from consciousness, that is, he is for ever asleep. A being who is asleep does not govern the universe; but the universe is governed; and must be governed by some divine being; thus there must be some divine being who is not asleep, and consequently who is not the supreme." And then, it is easy to prove from the Shastras that the government of the universe is not in one hand, but in many, therefore the gods are many. Another class arrives at the same conclusion, thus: "God is one; from him sprang all things; He is in all things; so that on whatever we look we look on God. It is false to say of anything it is not God, for nothing exists without God; therefore God is everything, and everything is God." Their views of God's omnipresence, though thus adequate as to extent, are wretchedly gross. Of omniscience they have scarce a thought; Para Bramha being ignorant that he is even asleep, and all the Shastras describing the highest gods as often in difficulties from ignorance, it is not wonderful that the people insist on the necessity of several gods; because, say they, no king could attend to a whole kingdom without provincial officers; so God cannot attend to all affairs without assistant deities. They sometimes worthily express omnipotence; but a moment after show that they have not any true conception on the subject; and indeed, even in the Shastras, halts, obstacles, and embarrassments retard every movement of alleged omnipotence, and impede even the work of creation. When, even in the Shastras, the acts of deity constantly flow from, or are mingled with, what they themselves term, "foulness, passion, and darkness," we could

only expect, what we find sadly realized, that in the thoughts of the people the deity stands apart from all idea of justice, fidelity, and truth. Yet they have universally the conviction, that sin will be punished; a conviction, however, taught chiefly by a voice quoting the sanctions of a law written on their heart. I never could discover in a Hindu mind, the idea of one great Being, holy and good, who is distinct from all He upholds as His own light from all it beautifies. Others beside theological observers, have been struck with the absence in Hindu piety of any sentiment like the love of God. Colonel Kennedy has said respecting the Shastras, that, "It is singular that such expressions as the love and fear of God, never occur in those sacred books."*

The doctrines concerning MAN, are next in importance to those concerning God. It is affirmed on all hands that the Hindus have always taught the immortality of the soul. But in this statement immortality is confounded with future existence, The Hindus hold that the soul exists after death; but, in our sense, or in any true sense, they do not hold it to be immortal. To the idea of life, especially of spiritual life, both personality and consciousness are essential. By the immortality of the soul, we understand, that to all eternity the soul will exist as a real being; and therefore will for ever think, feel, and act. This the Hindus do not hold. Their doctrine is not the immortality, but the divinity, of the soul. The soul, according to them, is not a creature of God, which it is not His will ever to annihilate; but it is a part of God, which *he has deluded* into the belief that it is a separate being. In

* Quoted by Dr. Wilson.

consequence of this delusion it suffers, on quitting the present body it will enter another, there it will suffer also, and so on until, recovering from its error, it will recognize itself as God, whereupon its suffering and its consciousness will terminate, by re-absorption into the Supreme. To a soul, the termination of conscious existence is not only death, but annihilation; it would, therefore, be more correct to say that the Hindus believe in the divinity of the soul, than that they believe in its immortality.

The soul is, according to Hinduism, ever and only a part of God; and yet its condition after death depends on its merit in life. If virtuous it may be born a goat or even a cow; if pious, a man; if saintly, a Bramhan; if immortal, a cat, a tiger, a crow, or a bug. Its progress in holiness is followed by a progressive elevation of birth, till absorption crowns its reward. Thus, upon the whole earth, only one kind of living being exists; "all life is one." "A man, a woman, a cow, a goat, a horse, an elephant, a bird, a tree," (for some include vegetables with animals,) "are names" says the Vishnu Purâna, "assigned to various bodies which are the consequences of acts. Man is neither a god, nor a man, nor a brute, nor a tree: these are mere varieties of shape, the effects of acts." This occurs in a passage often quoted by Bramhans in conversation with myself. The same Purâna recites the history of a prince, who after death was born a dog, then a jackal, then a wolf, then a vulture, then a crow, then a peacock, and finally a prince again.

It will be observed that in this doctrine heaven and hell have no place. Sin is punished by repeated gifts

of existence, and piety rewarded by privation of existtance for ever. Had these views prevailed from the beginning, no such idea as that of heaven or hell would have existed. Yet allusions to those places of punishment and reward are of constant occurrence, nor do the sacred writers preserve their grand theory of transmigrations free from intrusions of the older truth. For instance, the lot of the prince, whose migrations we have just noticed, is described in terms wholly inconsistent with the dogma of absorption. "The king then, along with his princess, ascended beyond the sphere of Indru, to the region where all desires are for ever gratified, obtaining ever-during and unequalled happiness in heaven." The same inconsistency prevades all their moral sanctions; for instance, the Vishnu Purâna, in one sentence, declares the punishment of an adulterer to be hell, and in the next to be birth as a reptile. To accommodate the theory of heaven and hell, with that of metempsychosis, they are sometimes represented as only temporary abodes, whence, eventually, the soul issues for a new round of births. But the existence of the names and ideas of these worlds, with such expressions as those just quoted, "ever-during," and "for ever gratified," strongly indicate a theology which had formed language before the doctrine of transmigration was invented.

So definitively does the idea of heaven and hell exist among the Hindus, that a heaven is assigned to each caste, and terrible descriptions are given of hell. "The heaven of the Pitris," says Parasara, "is the region of the devout Bramhans. The sphere of Indra, of Kshetriyas who fly not from the field. The region of the

winds is assigned to the Vaisyas, who are diligent in their occupation and submissive. Sudras are elevated to the sphere of the Gandharbas. Those Bramhans who lead religious lives, go to the world of the eighty-eight thousand saints: and that of the seven Rishis, is the seat of pious anchorets and hermits. The world of ancestors is that of respectable householders: and the region of Bramha is the asylum of religious mendicants. The imperishable region of the Yogis, (ascetic hermits,) is the highest seat of Vishnu, where they perpetually meditate on the supreme being, with minds intent on him alone: the sphere where they reside the gods themselves cannot behold. The sun, the moon, the planets shall repeatedly be and cease to be; but those who internally repeat the mystic adoration of the divinity shall never know decay." This last sentence is a bold and express declaration of immortality; but it is not the doctrine of the writer by whom it was penned; as might be shown from numerous passages in his work, in which it is declared that no state is "imperishable," and that the Yogis, so far from enjoying or desiring an existence that "shall never know decay," part only to lose all existence by becoming a particle of God. The doctrine of these two sentences is plainly a ray of earlier light still flitting among the shades that had fallen so thickly.

Besides this truly Hindu division of heaven into caste asylums, they enumerate popularly four heavens, one for each member of the Triad, and one for Indra. Bramha's heaven is *Satyaloka*, the Realm of Truth, where the creator dwells royally with his swan-drawn chariot, and where only Bramhans are received.

Vishnu reigns in *Vaikunka*, a sublime mountain in the north, into which all the excellent are admitted irrespective of sect or caste. Shiva too, the destroyer, has his heaven, *Kylasa*, a glorious mount of silver, which like that of Vishnu is free for all the good. But the favourite heaven of all, is *Swarga*, where in the region of the air Indra reigns over the three hundred and thirty millions of gods, and wherein abound the dance, the song, and all sensual joy.

The same authority from whom we quoted the above account of heaven, says:—"For those who neglect their duties, who revile the Vedas and obstruct religious rites, the places assigned after death are the terrific regions of darkness, of deep gloom, of fear, and of great terror; the fearful hell of sharp swords, the hell of scourges, and of a waveless sea." This is a much loftier view of the punishment than is given in other parts of the sacred writings, where the torments are particularized, and nearly all ridiculous, filth and feculence bearing the principal part. They also name punishments not unlike those of Milton. Over hell, (*patárla*,) presides Yemma, the child of the Sun. The sufferings of hell are not eternal; but in themselves expiate the offences for which they are inflicted, and purify the sufferer, who is eventually emancipated.

Probably from this latter belief sprang the sacrifice to departed souls, evidently as ancient as the Vedas, and still so much insisted upon. This rite also is incompatible with metempsychosis; for the manes are declared to receive pleasure from the offering, which could not be the case were they tenanting new bodies and perfectly unconscious of their previous history. We

conclude that the sacrifice is more ancient than the doctrine of transmigration, because it is very improbable that it should originate after that doctrine had been received; and also because its counter-part is discoverable amongst nearly all heathen people. In China, as in India, food is presented for the benefit of the dead; in West Africa, slaves; in Kafferland, cows; and in North America, a rifle.

In the Vedas nothing is distinctly said on the nature or destiny of the soul; but from such expressions as "the next world," and "immortality;" it is plain that a future life was part of the faith of the writers. And it seems doubtful whether even they had not a confused mixture of the notions of transmigration and immortality. For we find moon-plant wine thus addressed. "O divine Soma, the bestower of holy future births, thou art most heavenly and art praised for the procuring of immortality." Here the two doctrines seem unconsciously blended. But the phrase, "this world and the next," belongs palpably to the true doctrine of a future life; as does also "by means of these purifying verses a man reaches paradise, enjoyingly obtaining food, the reward of merit, and then goes to the abode of immortality."

It is generally assumed that metempsychosis was invented to promote humanity to animals. But perhaps it was only one of the most natural consequences of confounding visible agents with the invisible God. Once suppose fire, air, and the like to be God manifesting himself in different forms, and when you come to pronounce what living beings are, you cannot easily escape the same conclusion. The doctrine invented, it would

be deemed apt to promote all virtue, by exhibiting to men palpable retributions, and especially to promote tenderness to brutes, by teaching the identity of all life. On these two grounds, some have, naturally enough, considered the doctrine useful and humane. But truth is sacred; and he that, like Jeroboam, lifts a hand against her, no matter how wise the pretence, will, like Jeroboam, suffer. Man, in mutilating truth, by metempsychosis, has greviously wounded himself. He learns not to kill cows; but he learns at the same time not to pity afflicted men. His new doctrine protects the monkey, but curses the widow; saves the crow, but execrates the cripple. You must not kill a scorpion, for it may be your father; and you must not pity a leper, for his disease only tells what a miscreant he has been. Thus, while animal life is saved, human hearts are hardened, and human woes made doubly bitter.

It will be remembered, that from the Hindu account of our origin, the race was created of four different natures. The Bramhan, pervaded by the quality of goodness; the Kshetriya, by that of foulness; the Vaishya, by foulness and darkness; and the Shudra, by darkness alone. Thus the chief part of men were at first replete with evil qualities, and no fall or apostacy was necessary to account for the vices that inundated the earth. They would be only the natural development of the qualities of foulness and darkness so largely bestowed upon us by the Creator. But in every section of Hindu doctrine, we catch gleams of a theology antecedent to the Bramhanical system, and inconsistent with it. Just after recording the four distinct creations, the Vishnu Purâna proceeds:—"The beings who were

created by Bramha, of these four castes, at first were endowed with righteousness and perfect faith; they abode wherever they pleased, unchecked by any impediment; their hearts were free from guile; they were pure, made free from soil by observance of sacred institutes. In their sanctified minds Hari dwelt: and they were filled with perfect wisdom, by which they contemplated the glory of Vishnu. After a while that portion of Hari (Vishnu) which has been described as one with time, infused into created beings sin, as yet feeble, though formidable, or passion and the like: the impediment of the soul's liberation, the seed of iniquity sprang from darkness and desire. The innate perfectness of human nature was then no more evolved; the eight kinds of perfection were impaired; and these being enfeebled, and sin gaining strength, mortals were afflicted with pain, arising from susceptibility to contrasts, as heat and cold and the like." Here we have a doctrine clearly opposed to that which brings us from the hand of the Creator, full of "darkness and foulness," and yet even here our corruption is made the immediate act of deity, and that too of the Preserver!

The sinfulness of man once acknowledged, it is necessary to put before the sinner a way to pardon. To do this Hinduism elaborately toils. Among the means of salvation proposed by it, MEDITATION appears to stand first. This consists in fixing the mind steadily on the Supreme, abstracting it from any other object. To promote such abstraction suppression of the breath is enjoined. The nostrils being closed with the finger and thumb, the mouth is to be firmly shut. Mental philosophers may doubt, if they please, whether much

aid will be rendered by this specific to clear and close thought; but of its moral efficacy the Hindu has authoritative assurance. "For," says Menu, "as the dross and impurities of metallic ores are consumed by fire, thus are the sinful acts of the human organs consumed by suppression of the breath." Should this saintly exercise be continued for such a length of time, that the soul can no longer abide in the body, it will escape through the crown of the head, and instantly be rewarded for its piety by union with Para Bramha! Alas, how long must a conscience have vainly asked, "What must I do to be saved?" before it could accept such an answer as this! The Vishnu Purâna mingles with many puerilities on the subject of meditation, some high and beautiful touches, clearly pointing to patriarchal theology. A contemplatist, in order to perfection must forget all attachments—wife, children, parents, friends; must abjure every passion, lose every remembrance, and even every perception but that of God; must see in food, raiment, friends, foes, weapons, nought but God alone, and finally must recognize himself as God. Praladha, a most perfect contemplatist, thus terminates one of his meditations: "Glory, again and again, to that being to whom all returns, and from whom all proceeds; who is all, and in whom all things are; to him whom I also am; for he is everywhere; and through whom all things are from me, who am everlasting. I am undecayable, ever enduring, the receptacle of the spirit of the Supreme. Bramha is my name; the supreme soul, that is before all things, that is after the end of all."

Their methods of attaining to this transcendental

elevation are such as we should deem little adapted to the end. On one solemn occasion the worshipper is to conceive that "Bramha, with five faces and a red complexion, resides in his navel; Vishnu with four arms and a black complexion, in his heart; and Shiva, with five faces and a white complexion, in his forehead." Dubois was told by one, that his guru prescribed, as essential to contemplation, gazing upon the sky without a wink; an exercise by which the guru himself had lost one eye. This sage further instructed his disciple that "the hinge on which spirituality turns, is to keep all the orifices of the body so closely shut that none of the winds from within shall escape."

Perhaps, among the means of salvation, PENANCE ranks next to meditation. The most popular form of penance is pilgrimage. To a shrine of local reputation persons congregated from a distance of fifty or sixty miles; but to one of wide fame they flock from the extremes of Hindustan. Every day in the year numerous companies are wandering over some of the plains of India, in search of rest for their souls. To Benares, Ramisseram, Juggernaut, Tripety, and other places of noted sanctity, every year brings pilgrims from a distance of eight, ten, or even fifteen hundred miles. Through fatigue, accident, and infection, many lives are lost, and voluntary immolations swell the record of mortality. When we consider the gigantic scale on which this popular penance exists; could all those who perish during pilgrimage, the weakly, the aged, those who, being attacked by sickness, die of neglect, children brought forth on the journey, mothers hurried on before recovery, and sinking through fatigue; with the

victims of contagion which seldom misses the wandering bands; perhaps it would be found that the middle passage has a rival in destructiveness.

But pilgrimage is not the only penance, solitude and torture are emphatically enjoined. The highest state of piety is that in which home, family, and all things are forsaken, the body stripped naked, and a desert place chosen where the life may be wholly passed in austerities. Here the ascetic is to bear with equal pleasure, or rather without acknowledging either pleasure or pain, light and darkness, sun and rain, heat and cold. He must completely eschew all caste and family prejudices, with all desire for comforts or pleasures; he must eat all things promiscuously, no matter how revolting. Sannyâsis, or monks, sometimes traverse the country in a state of nudity; and a few of them boast of being able to eat fæces. Monstrous as this is, it is not all, for incredible tortures are often added. One wears round his neck for years a broad iron plate with a hole in the centre, which renders it impossible ever to rest the head. Another forces spikes through his lips or cheeks. Another stands upright, in the forest, till his legs swell, suppurate, and refuse to bear his weight; yet he retains his upright posture by leaning on a pillow swung from a tree. One holds up his hand till it stiffens and cannot be brought down again; another looks over his shoulder till his head, becoming fixed, refuses to turn, and he must be fed with liquids; another walks on spiked sandals; another buries himself up to the neck; another carries on his head a copper vessel containing fire; and one more holy than

all tortures himself thus:—A Yogi seen by Fryer,* "after having seated himself on a quadrangular stage, fell prostrate, and continued fervent in his devotions till the sun began to have considerable power." (It was the hot season.) "He then rose and stood on one leg gazing stedfastly at the sun, while fires, each large enough, says the traveller, to roast an ox, were kindled at the four corners of the stage; the penitent counting his beads, and occasionally, with his pot of incense, throwing combustible materials into the fire to increase the flames. He next bowed himself down in the centre of the four fires, keeping his eyes still fixed upon the sun. Afterwards, placing himself upright on his head, he stood for the extraordinary space of three hours upright, in that position; he then seated himself with his legs across, and thus remained sustaining the raging heat of the sun and of the fires till the end of the day." To us it is incomprehensible how such torments can be endured, nor could we even credit it, but on evidence painfully conclusive. It is not surprising that when, at a missionary meeting in an English county, an officer from India stated that he had seen a Yogi who had held his hand closed until the nails had grown through it and come out at the back, a good man quietly rose and making his way to the door, observed, "If he says that, he'll say aught."

After meditation and penance, perhaps the means of salvation deemed most effectual is ABLUTION. "He who, after having offered sacrifice to the Pitris, bathes in the Ganges, Sutledge, Beyah, Saraswatti, or in the Gomati at Naimisha, expiates all his sins." A single

* See Wilson's Mill, i. 480.

bath in the sea is of similar efficacy. Of the virtue of the Ganges, we have the following assurance in the Vishnu Purâna :—"Such is the efficacy of the stream that flows from the toe of Vishnu, that it confers heaven upon all who bathe in it designedly, or who even become accidentally immersed in it: those even shall obtain Swarga, (Indra's heaven,) whose bones, skin, fibres, hair, or any other part shall be left after death upon the earth which is contiguous to the Ganges." The confluence of two rivers is always effectual to save those who there bathe. Lakes, though not so potent as seas or streams, are not wholly powerless; some of their number, as those at Kumbakum and Tirthamalay, are of excellent virtue. At stated periods the saving properties of such lakes, as also of the confluence of rivers, rise to a wondrous potency. When such a time approaches, multitudes are assembled on the holy spot awaiting the moment of destiny. This is ascertained by the Jotisha, who no sooner proclaims it, than a frantic rush is made, all are bruised, the feeble are trodden under foot, multitudes are maimed, while between trampling and drowning many lose their lives. A gentleman high in the Bengal service, has informed me, that on one such occasion, the crowd was so dense, and (on the signal being given) the rush so furious, that one or two hundred persons were actually killed in an upright position by mere pressure. Such victims are envied as martyrs, whose better zeal called down upon their heads a crown denied to others. Waters assume a double virtue at every eclipse, on which occasion, a bath, no matter where performed, surely purifies from sin.

Nor are these the only cheap methods of salvation: the repetition of the Muntras (forms of prayer) infallibly purges every stain. Scarcely a legend of the Purânas closes without the assurance that whoever reads or hears it read, thereby expiates all offences, and in somes cases it is added that he shall no more commit evil actions. The bare sight of some mountains takes away sin! Then, if the *panchagavya*, or five products of the cow, be mixed together, a draught of the compound is not more distasteful to the palate, than it is advantageous to the soul; and many a thoughtful, sensible man, devoutly takes that filthy mixture, deeming it his salvation. In ancient times purification was consummated by the penitent being purged by fire, in order to which he offered himself up a whole burnt-offering. The appearance of this strange fanaticism in Russia, since the introduction of Christianity, and under a Christian guise, increases the curious proofs abounding in history, of our proneness to delusion.

When the Hindus speak of purification, it must not be supposed that they mean any change by which sin shall disappear, and truth and goodness spring up in a soul where they were not. Their purification is an occult nothing, whereby a superstition coquets with conscience, assuring it of health while the sore rankles as of old. In some passages of the Shastras, faint streaks of older and better doctrine glimmer, or seem to glimmer, through the shade; but they are seen faintly and uncertainly as a new moon in a night of clouds.* But you find not even this glimmer in the mind

* Obscuram, qualem primo qui surgere mense
Aut videt, aut vidisse putat, per nubila, lunam.

of the living Hindu. Alas, no! Not once, in long and earnest conversations with that most interesting people, did I discover in any soul a ray of hope that he would become on earth a new and holy man. Once, wishing to lead a Bramhan to the essential question, "What must I do to be saved," I said, "You know that you are a sinner. "No," replied he with some displeasure, "I am a Bramhan." Resolved not to concede this point, I said earnestly, "You know that you are a sinner; your conscience tells you so; you must admit it." Confused, and apparently fearing additional humiliation before those present, he said, "Well, then, for the sake of argument I will admit it." "Admitting, then, that you are a sinner, you must also admit that one of two things follow—either you must be pardoned or you must be punished." He paused, reflected for a moment, and said, "That is plain, if a sinner do not expiate his sin, he must suffer for it." "Then finding yourself in a position in which you must bear punishment unless you obtain pardon, you will name the means whereby you may certainly escape the one and secure the other." The persons present gazed at him: his countenance fell; he said hesitatingly, *swalpa iru*, *swalpa iru*, "wait a moment, wait a moment," and after a second or two of thought he replied with vivacity, "This is it: if I steal, that is a sin: the way to obtain pardon for that sin is to take refuge at the feet of the god who has been celebrated for theft. If I lie, that is a sin: the way to obtain pardon for that sin is to take refuge at the feet of the god who has been noted for falsehood." And thus he ran through a dark list of transgressions, proposing to expiate each by adoring a celestial who,

having shared his weakness, might pity his danger. This man was past middle age; he was a priest; his son was sitting by, and some of the inferior people were there to hear his answer to the grand question. He gave the hopeless humbling answer just recorded, with an air of good faith and complacency. And how many of our fellow-subjects, when their conscience forces upon them the question, What can I do to be saved? can give no better reply!

On minor points of doctrine, however interesting, we cannot pause. On the MORALS of Hinduism we need not speak at large. In the Shastras are found dispersed many precepts of admirable morality; but taking those books as a whole, no works of our most shameless authors, are so unblushing, or so deleterious. The Sama Veda treats drunkenness as a celestial pastime; and yet of all vices this is the most repugnant to the genius of modern Hinduism. Again, all the gods are represented as playing at will with truth, honour, chastity, natural affection, and every virtue; running, for sport, into the vilest excess, and consecrating by their example all hateful deeds. Falsehood, if with a pious motive, has direct sanction. Menu declares that, "A giver of false evidence from a pious motive, even though he know the truth, shall not lose a seat in heaven: such evidence men call divine speech." Shortly after he supplies us with a list of the occasions in which such pious motive may be claimed: "In the case of courtezans, of marriages, of food eaten by cows, of fuel for a sacrifice, or a benefit or protection accruing to a Bramhan, there is no sin in an oath." Vishnu has often preserved the gods, by the most wicked impostures.

Lies flow familiarly from divine lips, and thus lose all disrepute in mortal eyes. The amours of the gods are so detailed as inevitably to corrupt all who read and admire them; while they argue, on the part of the writers, a horrible familiarity with every variety of debauch. In the lofty poetry of the sacred books are musically sung expressions of a coarseness that would be spurned from the vilest ballad.* Part of the retinue of every temple consists of priestesses, who are the only educated women in the country, and whose profession it is to corrupt the public morals. Of the secret worship of the *Shakties*, or procreative energies, which takes place under Bramhanical sanction, it would be wrong to say a word beyond this, that on such occasions the prejudices of caste are equally disregarded with the laws of God. In some of the temples, excesses are, at certain times, openly committed, which would be concealed even in our lowest dens of vice. It is very easy for those who are not too sensible on such points, to say that missionaries are; but it is not so easy to answer the question of Ward: "Is there such a strong bias in human nature to virtue, that a man will be pure in spite of the example of his gods, ... and when the very services of his temple present the most fascinating temptations to impurity?" No parent watchful of the morality of his children, would allow them to read the tomes, to which our brethren in the East devoutly resort for heavenly instruction.

* It may be judged what will be the character of the histories, when, even in a hymn of the comparatively pure Rig Veda, we have such language as this: *Mulier obtinet maritum, excitant genitale semen; concipiendo virilem humorem uxor extrahit.*—Rosen.

We may give an illustration of the fact, that it is impossible to judge of the real sentiments of the Hindus, merely by detached sentences of the sacred books. That the true character of an action is fixed, not by its outward appearance, but by the heart of him who performs it, is a principle lying deep at the basis of all morality. We find that principle announced by the Hindus. Carrying to the words our own ideas, we should hail them as proof of clear light on morals. But should we meet with a little book of popular tales, we find one designed to illustrate this principle: it runs thus:—In a certain town lived two merchants, bosom friends, who met daily, after business, to enjoy each other's society. On parting, one of the friends, being devout, went to the temple: the other, being licentious, went to the home of the priestesses. Thus matters proceeded till they both died, when the devotee was sent to hell, and the libertine was received to heaven. A sage, surprised at this, went to Bramha and demanded the reason why a devout man was consigned to torment, and a wicked man exalted to bliss. Bramha replied, "When they daily parted, he who went among the priestesses often thought of his devout friend, and reflected how much better it would have been, had he gone with him to worship in the temple. Thus, though outwardly committing sin, his heart was occupied with pious thoughts. The other, while in the temple, often thought of his voluptuous friend, and of the manner in which he was engaged. Thus, though actually performing a holy work, his heart was revolving impure subjects: and you are aware," added Bramha, "that the character of actions depends on the state of the heart; therefore I

have received to heaven him whose heart was piously disposed, and sent to hell him whose heart was licentious." We should have deemed it impossible so exactly to pervert a good principle, or at least, impossible that any man should accept the perversion. But this story, with its hateful moral, has been zealously defended, against my censures, by learned and sincere Bramhans. There is a fearful art in error, to transmute into noxious vapour truths the most luminous and solid.

Perhaps the most natural place in which to consider the MINISTRY of a religious system is after its doctrines and its morals, but before its ritual. The ministry of Hinduism is well defined. It is a priesthood holding the functions of teachers in addition to those which are purely sacerdotal. This office can be held only in a line of inviolable succession. No power can introduce to it one whom the gods did not predestinate to its honours, by giving him a Bramhan birth. But birth alone does not constitute the priest. "By birth," says the Shastras, "his caste is that of a Shudra; by the initiatory sacrament, his caste is that of the twice-born." This initiatory sacrament is performed when the boy has reached the age of seven or nine years. An assembly of the Bramhans being convoked, and solemn sacrifices offered, the boy is shaved, washed, and girded; when the father, placing him with his face to the east, repeats in his ear some portion of the holy Veda, of which, up to that hour, he has not been permitted to hear a word. Three fine cords, in the shape of a skein of thread, are then passed under one arm, and over the opposite shoulder, so as to hang across the chest; and

this triple cord is the sign of his actual admisssion to the priestly office. It is made of cotton which Bramhanical hands alone have plucked from the bush, prepared, spun, and twisted; for no mortal of lower birth is worthy to touch the sacred fibre destined to form the badge of a terrestrial god. From the moment of this investiture, the Bramhan is declared *dvi-jana*, "born again;" so that the doctrine of regeneration by an initial right is not confined to Europe.

The priesthood, thus conferred, cannot be lost, except by some infamy that drives the Bramhan from his caste. His ignorance may be great, his calling secular, and his character disreputable; but the *sacerdotium* abides intact. From the day of investiture he possesses six rights: that of reading the Vedas, and that of getting them read; that of making the sacrifice of *yajna*, and that of causing it to be made; that of receiving alms, and that of giving alms to the Bramhans. Of these privileges, reading the Vedas, and making or causing the *yajna*, are exclusively confined to the sacred caste. The king caste are permitted to hear the Vedas, though not to read them; and in the privilege of giving alms to the Bramhans, they graciously permit even a Shudra to participate; but I believe no out-caste dare aspire to that honour. Among the civil immunities accorded to the priestly office are, exemption from house-tax, from local duties on goods, and from corporal punishment.

They divide sacerdotal life into four stages; on the first of which, that of *Bramhachari*, or "student," the youth enters at his initiation. He must now daily bathe, and twice a day offer the sacrifice of the *homam*. He at once begins to study, first learning to read and write,

then proceeding to the sacred books, and adding languages and sciences according to his talents or his funds. The number of Bramhans who understand the Vedas is very limited. They will repeat *muntras* all their lives without understanding a word of them. A Romish missionary has aptly said, "They may be compared to the peasantry in the Catholic countries of Europe, who learn to read Latin, that they may be able to chant the psalms on Sundays at church." A friend of mine once, hearing schoolboys reciting Sanscrit verses, demanded to know the meaning. The poor urchins referred him to their master, and the master frankly owned he did not know.

Even the Bramhan least addicted to study is careful to maintain that ceremonial purity, by which they hold themselves above all other mortals. They bathe at least once a day, generally twice, and if rigid thrice: this is persevered in through the coldest weather, and is matter of much spiritual pride. Never did Pharisee more complacently regard his superiority to other men, than does a Bramhan the unmatched sanctity of his ablutions. When he returns from intercourse with the world, to his own house, the clothes he wore are left in an outer room, and the stains which the touch or the breath of less holy beings may have left on his person are carefully washed away. Some physicians, when feeling the pulse of a Shudra, will place their silk between their finger and his skin. In walking or sitting, he must carefully avoid the touch of bones, rags, saliva, and countless things beside; to avoid that of a dog he would run far; that of a Pariah would set him frantic. Nor is that of a European much more welcome; but

interest checks the expression of disgust. Upon the vessels he uses in cooking no eye may fall but one of the sacred caste; should any less holy glance, by misfortune, meet one of these illustrious pots, it is for ever polluted and must be destroyed. In drawing water, should his vessel touch one belonging to a man of different caste, his, if earthenware, must be broken; if brass, long and laboriously scoured. Whenever it is possible, they have wells reserved for their own use; and hard indeed is their lot, when necessity compels them to draw from a well where even an out-caste may come. Once, in showing a Bramhan a simple experiment, I accidentally threw water upon him from a glass. Had it been *aquafortis*, he could not have more vigorously leaped and screamed. It was a severe misfortune; he soberly declared that he almost doubted whether he were any longer a Bramhan; and many a bathing, at least, that stain from clear water would cost him.

Fasting is among the essential duties of a Bramhan. From all animal food he constantly abstains, as also from all intoxicating drinks, and all bulbous roots.* In addition to which, he is obliged to keep a fast day at the change and full of the moon, on the eleventh day of each moon, and at the solstices, equinoxes, and eclipses. Their fast is not absolute, for though they do not take any meal till after sunset, they may freely use milk and fruit, which are at all times chief articles of their diet. The Abbé Dubois thus estimates the religious value of their abstinence:—"These fasts have

* On these points the northern Bramhans have grown very lax.

for their objects two purposes, which would do credit to a religion more pure than that of the Bramhans. The first is to obtain by this act of penitence the forgiveness of their sins; and the second, to avert the malign influence of the stars." It would seem, then, that the worthy priest concurred in the view of God's government, which supposes that offences against law are compensated by bodily pain; and that our lot is affected for good or ill by the mute stars!

Upon marriage, the Bramhan becomes a householder, or GRIHASTA; thus entering upon the second stage of his priestly career. His conduct is now regulated by multifarious rules referring to ablution, recitation of prayers, giving alms to the Bramhans, the practising hospitality, and the study of sacred books; but many of these points will be more naturally reviewed, when we examine Hindu ritual.

The third stage of priestly life is that of VANAPRASHTA, or ascetic, in which the Bramhan abandons all society but that of his wife, and with her resides in a forest, wholly given up to devotions. In ancient times, many Bramhans practised this mode of life; but now it is chiefly left to men of inferior caste, who, as Orme remarks, "seek to obtain, by severities, the religious veneration accorded to the Bramhans on account of birth alone." It would appear that, even in the days of Alexander, the Bramhans did not monopolize ascetic life; for Arrian, in noting the fact that the Indians were "not allowed to exercise two vocations, nor to change from one to another," adds, "except to that of the Gymnosophists, which is of all professions the most austere." The Gymnosophists he had previously de-

scribed as being the highest class of Hindus, and as the priests, adding, that not even a private sacrifice was considered "pleasing to the gods," unless presented by them. He states, also, that "they practised divination, went naked, and lived on fruits."

The fourth, and highest stage of priestly life is that of SANNYASI, or hermit, in which the Bramhan renounces wife, family, caste, goods, and all earthly things, devoting himself wholly to contemplation, and to such voluntary torments as we have already described.

This division of the Bramhans into four stages is now little more than nominal; for the *Vanaprashta* and *Sannyasi* are very rare, and the *Bramhachari* are only boys. The *Grihasta*, or householder Bramhans may, therefore, be said to include nearly all the adults of the caste. Their real divisions are into the two classes, sacred and secular; into the four classes, each of whom follows one of the four Vedas; and into Vishnuite, Shivaite, or Neutrals, according to their sectarian creed. Each sect has, among the Bramhans of its sacred class, two different *orders* of PRIESTS. Of these the lower is the PUROHITA, who ranks above the ordinary Bramhan; and the higher is the GURU, who ranks above Bramhan, Purohita, and all beings not divine.

The duties of the Purohita are ceremonial. He is not a teacher, unless one choose to consider as teaching the annual publication of the almanac, which devolves upon him, as does, also, the duty of announcing, on the first day of the year, who is to be, for the year, king of the gods, which star is to be lord of the stars, what deity will have charge of the crops, how much rain will fall, how the harvest will turn out, what amount of

vermin will disturb good people in their slumbers, and other matters equally important to be known, and equally in his power to reveal. His substantial duties are to calculate nativities, to choose names for children, to bless, by his *muntras*, houses, tanks, and wells, at their opening; to consecrate new temples, and to transubstantiate new idols. He also celebrates all marriages and funerals; no other Bramhan being instructed in all the motions, flexions, repetitions, and particularities necessary to the due performance of these rites. The Purohita is looked up to by all classes, even including the Bramhans. Every prince keeps one at court, without whose sanction he will not set out to hunt, undertake a war, or embark in any concern of moment. All Purohitas must be married, and, if left widowers, must re-marry before they can again perform their most important duties. They are careful to train only their own sons in the ceremonial minutiæ, by which caution the honours and gains of office are preserved in the family.

The GURU is more a teacher and ruler than an officiating priest. Did I give a faithful account of this hierarchy, it would be impossible to escape the suspicion of designedly insinuating resemblances between them and their European brethren. All, therefore, which I say respecting them shall be in the words of a Roman Catholic priest, altering, for sake of clearness, the arrangement:—"Each caste has its particular Guru; but all of them are not invested with an equal degree of authority. There is a gradation among the Gurus themselves, according to the dignity of the castes they belong to; and a kind of hierarchy has grown up among them, which preserves the subordination of one to

another. In short, there is an inferior clergy, very numerous in every quarter; while every sect has its particular high priests, who are but few in number. The place of residence of the Hindu pontiffs is commonly called *Singhasana*, which signifies 'a throne.' . . . . . Those who are elevated to this great dignity, receive in most cases marks of reverence, or rather of adoration, which are not rendered even to the gods themselves . . . . . Some of the Gurus are married; but in general they live in celibacy. . . . . Except during their visitations, the Gurus live in retirement. They commonly reside in a kind of monasteries, or insulated hermitages. The Gurus generally make a tour, from time to time, among their disciples, perhaps in a circle of two hundred miles from their place of residence. During this visitation, their principal, and, I may say, their only object, is to amass money. Besides the fines which they levy from persons guilty of offences, or any breach of the ceremonies of the caste or sect, they often exact from their adherents a tribute to the utmost extent of their means . . . . . The great Gurus never appear in public without the utmost degree of pomp; but it is when they proceed to a visitation of their district that they are surrounded with their whole splendour. They commonly make the procession on the back of an elephant, or seated in a rich palankeen. Some of them have a guard of horse, and are surrounded with numerous troops, both cavalry and infantry. Several bands of musicians precede them. Flags, in all the varieties of colour, wave round them, adorned with the pictures of their gods. Some of their officers take the lead, singing odes in their praise, or admonishing the specta-

tors to be prepared to pay the mighty Guru, as he comes up, the honour and reverence which are due to him. Incense and other perfumes are burnt in profusion; new clothes are spread before him on the road; boughs of trees, forming triumphal arches, are expanded in many places on the way through which he passes. Bands of young women, or the dancing-girls of the temples, relieve each other, and keep up with the procession, enlivening it with lewd songs and lascivious dances. This pompous show attracts a crowd of people, who throng to prostrate themselves before the Guru."

The Guru is by this author stated to have temporal power, "which consists chiefly in a superintendance over the different castes, by enforcing the due observance of their general and particular customs, and punishing the refractory. They have also the power of expelling from the tribe, and of restoring those who had been expelled. . . . . They possess an equal extent of spiritual jurisdiction. The *Sashtangam*, or prostration of the eight members, is made before them; and when followed by their benediction, or *asirvadam*, is effectual for the remission of all sins. The look even of a Guru has the same efficacy. . . . . But if the benediction of the Gurus and the other little tokens of their favour, which they bestow on their disciples, have so wonderful an influence in attracting the respect and reverence of the silly populace, their curse, which is not less powerful, fills them with terror and awe. The Hindu is persuaded that it never fails to take effect, whether justly or unjustly incurred. . . . . Sometimes they tell of a person struck dead on the spot by the curse of the

Guru; sometimes of one suddenly seized with a shivering through every joint, which goes on, and will never cease until the malediction is stayed. At other times, it is a pregnant woman whom they describe as miscarrying by it; or a labourer, perhaps, who was doomed to see all his cattle perish in a moment. Nay, I have heard from these men stories still more ridiculous, and given with the utmost gravity: of a man, for example, being changed into a stone, and of another converted into a hog by their Guru's malediction."*

The ministry of Hinduism, then, includes all the best-educated men of the country, whom honours, rights, and education enlist to defend it manfully. Large numbers of them carry their influence into the various walks of secular life. Many, also, are supported in leisure, partly by presents, partly by temple revenues, and partly by landed endowments given by the devout of other times, who thereby earned the reputation of piety, and hoped to make peace for their souls. The peculiar honours of this numerous caste depend on their religion; by it, also, the pecuniary interests of all are advanced, and upon it the livelihood of many wholly depends. These considerations, added to natural prepossessions, make them almost universally zealous defenders of their system. It is an error, incident to those who judge others by their own light, to deem it impossible that men of keen intellect, like the Bramhans, can believe the absurdities of the Shastras. The human mind has not a more difficult work than to emancipate itself from views inculcated in childhood, identified with every in-

* "Description of the People of India," &c., pp. 64, *et seq.*

terest, and sweetened by gifting ourselves with flattering distinctions.* From detached portions of the Shastras a few Bramhans have extracted a philosophical system, holding which they despise the grosser superstitions as only for the mass. Perhaps an equal number believe all religion to be a grand imposture. But the great bulk of them sincerely believe and uphold the reigning system. On points of religion, their clear intellects are completely and woefully benighted.

Of the morals of the Bramhans, and, indeed, of the people in general, it may be said that, though deplorably low, they are not near so bad as the gods they serve. Had their system of religion been suffered by Providence to produce all its legitimate effects, Hindustan would have been a Sodom, in which even an angel might dread to pass a day. But while man's bad heart has been allowed to exhibit its own shame, by the abominations it has brought forth under guise of religion, Divine Mercy has restrained the practical workings of its corruption within limits which permitted the existence of society. Perhaps, in general morality, the

* Voltaire, in his zeal to prove heathenism immaculate, rejects as impossible, superstitions that, had he lived a little longer, he must have recognised as existing. Respecting the alleged worship of the devil, he says: "One must have much hardihood, and little reason, in order to believe it possible to take for a god a being supposed to be condemned of God to punishment and shame eternal, an abominable and ridiculous phantom, occupied in throwing us into the abyss of his torments." Alas for human nature! Many a man, of natural intellect perhaps not behind that of Voltaire himself, is this day the melancholy proof that "one must have much hardihood and little reason" to assert, *L'idée d'adorer le diable n'est jamais tombée dans la tête d'aucun homme.* Had Voltaire been born in a Ceylonese village, instead of in Christendom, he might himself have "adored the devil."

Bramhans are rather above than below the rest of the people. Their avarice, however, and excessive eating are proverbial, their pride excessive; and in all public offices they oppress and exact without mercy. They are consequently more dreaded than venerated. In their absence, the lower classes bitingly express hatred; but no sooner does one appear, than his influence is manifest. At all grand ceremonies their presence is essential; and this, with their fasts, their ablutions, the power ascribed to their *muntras*, and, perhaps more than all, their great superiority in education and manners, gives them a high command over the whole people. Their bearing is always proud, sometimes really noble. Many carry all the marks of high intellectualism. To our eye, the brown complexion is less favourable to the expression of mind than the white; but I have seen some Bramhans on whom it was impossible to look without an impression of the kind received from those *élite* faces among ourselves, where, at a glance, you see history, classics, and poetry, researches, arguments, and meditations, all bound in the clear vellum of the brow, and lettered in lines of thought. It may be fairly doubted, whether this remarkable priesthood would not present as large a proportion of persons capable of high mental effort, as any other class of men in the world; and sure it is that, when the day of India's regeneration has come, it will yield choice examples of those rare and lovely mortals in whom the gentleman, the genius, and the Christian combine.

The Ritual of Hinduism is hyper-redundant. Taking the Bramhan at the moment of rising, it directs

him in the most private acts, with a minuteness we may not copy. The method of cleaning his teeth follows, with the tree off which he must break a twig for a brush, the prayer he must offer to the tree for leave, and the kind of place where he may throw away his twig-brush when he has done. Then follows the rubric of the bath, how he is to perform it, what prayers he is to say while in it, and what on emerging out of it. Dubois says: "It would be tedious to describe the variety of gestures and movements which the Bramhan exhibits in such cases. But we may select one in particular, namely, the sign of the cross, which he distinctly makes as a salutation to his head, his belly, his right and left shoulders." He is also instructed how to sacrifice to the sun, to adorn his forehead, to hold his breath, and to pray to the true *Ravi*. Then are carefully prescribed his acts on returning home, his preparatory sacrifice before meals, his offering of part of the food to the dead, and his mode of eating. But, as necessary to give even the faintest idea of the overload of ceremony laid on the poor Bramhan, we give Colebrooke's description of the rites by which those who have an earthly calling are permitted to escape the more cumbrous duties binding on a Bramhan not so limited for time. When about to partake of his morning meal, "sitting down in a place free from all impurities, and setting a vessel containing fire on his right hand, the worshipper hallows the ground by throwing away a lighted piece of cusa-grass, while he recites the appropriate text, and then places his fire on the consecrated spot, repeating the prayer which is used, when the household and sacrificial fires are kindled by the attri

tion of wood. He next lays cusa-grass on the eastern side of the fire, with its tips pointed towards the north, exclaiming, 'I praise divine fire, primevally consecrated, the efficient performer of a solemn ceremony, the chief agent of a sacrifice, the most liberal giver of gems.' He spreads it on the southern side, with its points towards the east, repeating the commencement of the Yajur Veda. 1. 'I gather thee for the sake of rain.' 2. 'I pluck thee' (at this he is supposed to break off the branch of a tree) 'for the sake of strength.' 3. 'Ye are' (he touches calves with the branch he has pulled off) 'like unto air. May the liberal generator of worlds make you' (here he touches, or is supposed to touch, milch cows with the same branch) 'happily reach this most excellent sacrifice.' In like manner he lays grass on the two other sides of the fire, on the western side with the tips to the north, crying, 'Fire! approach to taste my offering; thou who art praised for the gift of oblations; sit down on this grass, thou who art the complete performer of the solemn sacrifices.' And on the northern side, with the tips pointed to the east, saying, 'May divine waters be auspicious to us,' &c. When all these ceremonies are completed, he stirs the fire, and sprinkles water upon it; after which, having his hands smeared with clarified butter, he offers food three several times, repeating, 'Earth! sky! heaven!' Five similar oblations are then performed: one to the regent of fire; one to the god of medicine; one to the assembled deities; one to the lord of created beings; and one to the creator of the universe. Six more oblations are then offered with six prayers, each oblation having its separate prayer. 1. 'Fire! thou dost

expiate a sin against the gods; may this oblation be efficacious!' 2. 'Thou dost expiate a sin against man.' 3. 'Thou dost expiate a sin against the manes.' 4. 'Thou dost expiate repeated sins.' 5. 'Thou dost expiate every sin I have committed, whether willingly or unintentionally: may this oblation be efficacious!' He next worships the fire, making an oblation with the following prayer:—'Fire! seven are thy fuels; seven thy tongues; seven thy holy sages; seven thy beloved abodes; seven ways do seven sacrifices worship thee; thy sources are seven; be content with this clarified butter; may this oblation be efficacious!' As the sacred lamp was lighted for the repulsion of evil spirits, before the oblations to the gods and manes were presented, it is now extinguished, while recitation is made of the following text:—'In solemn acts of religion, whatever fails through the negligence of those who perform the ceremony, may be perfected solely through meditation on Vishnu.' The oblations to spirits are next offered; the performer depositing portions of food in the several places prescribed for it, having previously swept each place with his hand, and sprinkled it with water. Near the spot where the vessel of water stands, he makes three offerings, saying, 'Salutation to rain! to water! to the earth!' He makes them at both doors of his house to Dhatri and Vidhatri, or Bramha, the protector and creator. He presents them to the eight points of the compass, adding a salution to them and to the regents of them. To Bramha, to the sky, and to the sun, he makes oblations with salutation, in the middle of the house. He then offers similar oblations to all the gods, to all beings. After the sacrament of

spirits, thus performed, the worshipper, shifting the sacramental cord, and looking towards the south, drops upon one knee, and presents a sacrifice to the manes of ancestors, saying, 'Salutation to progenitors! may this ancestral food be acceptable!'" After all this, he may take his meal. But, as we before remarked, these are only the abridged forms prescribed for those whose circumstances debar them from performing the full service, which is of five-fold tediousness. Did any Bramhan seriously undertake to observe every direction of his rubric, not a single moment of his life would remain for any useful purpose.

The sacrifices clothed in such voluminous ceremony are, in themselves, very simple. The *Alati* consists only in holding on a copper plate a lighted lamp of rice paste, and in making several circles; and the more august *Homan*, in kindling the sacred fire, pouring upon it oil or liquid butter, and throwing into it some grains of rice. It will be observed, that both fire and water are made holy by the *muntras* of the *Parohita*, and are important in every sacrifice, and to keep up a perpetual fire was a privilege of the highest order.*

Of the prayers used on various occasions, many specimens have been already furnished. Mere repetition of the different names of a god is a form of prayer much approved. To show its virtue, the natives often referred me to a case narrated in the Vishnu Purâna, where a hater of Vishnu was so full of animosity, that he never ceased abusing him, and thus necessarily repeated his appellations, the consequence of which was, that

* It is said that the last perpetual fire which was kept up in Bengal, by the Rajah of Burdevan, is now extinct.

though killed by Krishna, for his wickedness, he obtained instantly the highest of all rewards—absorption. You often hear the mendicant friars rhyming at great length the names of their favourite deity. Of all prayers, the *Gayatri* has the most marvellous powers. It is addressed to the sun, and is thus rendered by Dr. Wilson of Bombay: "O earth! sky! heavens! we meditate on that adorable light of the resplendent sun, may it direct our intellects!" This prayer is from the Rig Veda, and is a holiness altogether transcendental in Bramhanical esteem. From the Yajur Veda, Dubois quotes the following morning prayer: "May the sun, may sovereign will, may the gods who preside over our will, and chiefly thou, O moon! pardon the sins I have this night committed by my will, by my memory, by my speech, by my hands, by my feet, by my belly." He gives also the following prayer to the tree *Ravi*, after one of similar import to the sun: "Thou art the king of the trees; thy root resembles Bramha, thy branches are like Shiva; thou grantest the remission of sins, and a blessed world after death, to those who have honoured thee in their lives by the ceremonies of the cord and of marriage, to those who have offered thee sacrifices, have gone round about thee, have saluted and honoured thee. Destroy my sins, and grant me a happy world after I die." Of the prayers contained in the Sama Veda, several have been given under different heads; but we add one or two more:—

"O Indra! wherever, whether in some strong chest, or in some hill or well, treasure worthy of regard is laid up, thence do thou bring it to us." (Page 39.)

"O most powerful Indra, we desire that joyous sen-

sation, which, arising from plenteous potations of the moon-plant juice, delights the mind, and under the influence of which thou slewest the cannibal Atrina." (Page 39.)

"Confer on us for our preservation an intellect for obtaining cows, horses, and heroes." (Page 143.)

"Grant, O ye gods that receive sacrifice, that we may hear only what is auspicious with our ears, and see only what is auspicious with our eyes! and may we who propitiate the gods arrive at the age laid down by the divinity with undiminished mental and bodily vigour. May Indra, served with many sacrificial viands, grant us prosperity! May the nourishing sun, who knows all things, grant us prosperity! May Parshya Rishi, the ring of whose chariot-wheel could not be cut, grant us prosperity. (O triune divinity!) may Vrihaspati grant us prosperity. (Triune divinity! grant us prosperity.") (Page 283.)

This last is the conclusion of the Sama Veda. The expression which Dr. Stephenson has judged it right to translate by "triune divinity," is the syllable *Om*, composed of the letters A, U, M, which are the symbols of Bramha, Vishnu, and Shiva. All sacred prayers are preceded by inaudible repetition of this syllable; and all pauses are filled up in the same way. It is the highest and holiest of all sanctities. Its powers to cleanse and to ennoble are boundless; and it is pronounced with a reverence analogous to that of the Rabbis for the name JEHOVAH. Every man professing devotion is furnished with a long rosary, by which he helps his memory as to the number of prayers said; for Hinduism is fully embued with the strange, but

wide-spread error, that salvation is sold for syllables, and that, consequently, in proportion to the prayers recited, is the advance made in the favour of God.

So completely does Hindu ritual embrace all stages of life, that ceremonies are prescribed for the time at which hope first arises, that a human being is about to receive existence, while each month before the birth has its appropriate observances. On the eleventh day after the birth comes the purification of the mother, who, holding her infant in her arms, sits down with her husband by her side. The Purohita consecrates some water; "part of which," to quote Dubois, "he pours into the hands of the husband and wife, who drop part on their heads, and drink the rest; after which the house is sprinkled with holy water, of which the remainder is thrown into the well." On the next day comes the ceremony of naming the child, described in the last chapter. At the age of six months he first receives solid food, on which occasion the Bramhans are feasted, the sacrifice of *Homam* and *Alati* performed, and to a dish, "turned into a god by the power of the *muntras* of the *Purohita*," all the married women present* bow with clasped hands, and, praying that the child may thrive, rub his lips with boiled rice. As nearly all Hindus shave the head, the first occurrence of that operation is marked with similar rites. The same is the case when the ears are pierced. After this, in the Bramhan, Rajah, and Merchant castes, follows the ceremony of the triple cord; and then comes the

* It must always be remembered, that widows are not included in the term "married women." Their presence is not allowed.

marriage, of the ceremonies attendant on which our rather lengthy account was but an imperfect outline.

When death approaches, the Purohita is again called. The dying man is laid upon the ground, that his soul may not have to carry into its next body the incumbrance of either bed or mat. He then gives leave to perform the ceremony of expiation. The Purohita pours into his mouth some of the *punchagavya*, or five products of the cow, by which nauseous draught all corporal defilement is purged. The patient is then required to say certain *muntras*, whereby all his sins are expiated. A cow, with her calf, is now introduced, having her horns graced with rings, and her neck with garlands. The dying mun takes hold of her tail, while the Purohita and others chant *muntras*, praying that she may conduct him safely to the other world. He then presents the cow to a Bramhan, by that offering procuring his soul a safe passage across the river of fire which forms the frontier of the lower sphere. Here, as everywhere in Hindu usages, we see that, though transmigration is universally received, it is not the original doctrine that shapes their ceremonies.

After death, the body being borne to the place of burial, the spot of ground selected for the pyre is slightly hollowed, and consecrated by the Purohita. The body being stretched on the wood, the sacrifice of *Homam* is offered on its chest, the fuel being dried cow-dung. Then comes the extreme unction, in which certain *muntras* are addressed to every aperture in the frame, and then each anointed with *ghee*. Finally, before ignition, the corpse and pile are sprinkled with the

punchagavya, and with water. Those who would wish a fuller detail of these ceremonies will find it in Dubois.

Besides the direction of personal and family religion, the ritual provides also for public worship. Amongst the rites coming under this class, perhaps the most remarkable is that for producing gods; for these are not so much the creation of the artificer as of the Purohita. When the sculptor, founder, goldsmith, or carver, has completed an image, a Hindu would no more worship it than would a Roman Catholic worship the wafer before consecration. On the contrary, he lets the most impure handle it, sells it for value, and calls it not a god, but an image. To become a god, it must have pronounced over it, by the Purohita, the *muntra* of *pranapatishta*, "giving of life." As these potent words pass the sacerdotal lips, the *karle*, "glory," of the god in question enters the image, and there takes up its abode: henceforth, therefore, that which was only an image is a god—is, in fact, transubstantiated. That in using this word, I do not insinuate a resemblance gratuitously, is very plain from the language of Mora Bhatta, of Bombay. In defending idolatry, he says:—"If, then, it is admitted that there is power in human words, it cannot be doubted that there is power in those which are divine, and altogether true and faithful. In these circumstances, by means of the *muntras*, the Deity is, according to the rules of the sacred books, called into the image; and thus the immaterial god obtains an imperceptible imagined body. When he is thus endowed with a body, he is, according to the rules laid down in the sacred books, treated as one having a body, and from the experience of this treatment he derives

pleasure." It is also plain, that though the Abbé Dubois abstains from noting the agreement of the Hindu doctrine with his own, he did not fail to perceive it. At page 73, among the duties of the Purohita, he classes "to give life to the statues and other objects of an idolatrous worship, and to *imbue them with the divine essence.*" At page 87: "This dish has already been *turned into a god* by virtue of the *muntras* of the Purohita." Page 94: "They are often contented with setting up a cone made of mud or cow-dung, to represent that deity, (Vignayshvara,) which, by virtue of the Purohita's *muntram*, becomes a god." Page 96: "The Purohita enters, carrying fire in an earthen vessel, which he places upon the pile, and by means of the *muntram* he makes this fire a god."

A god, once made, is well honoured. A holy light burns in his presence; he is often anointed; fragrant garlands deck his person; and daily are gifts presented to please him and benefit his priest. Each temple has one or more priests, and all of any extent have priestesses, who, besides dancing and singing at procession, often do so in the temple, thus making it the theatre where to display their venal charms. I have been told that this shameless part of temple retinue is not near so common in Bengal as in the south, and yet it appears very familiar to writers whose observation has been confined to that Presidency. No public instruction is given in the temple, nor does anything occur that can properly be called united worship. Morning and evening the devotees repair to the shrine, many of them every day in the year; and each independently performs his devotions. The whole service consists in

anointing the idol with liquid butter, or sometimes with milk, or even curds or honey, or, to make up their favourite number of five, sugar is added to the anointing substances; clothes, sandal-wood, and garlands, are presented; the lamp kindled, and incense burnt; eatables and money offered; then they walk round the idol a greater or less number of times according to the fervour of their devotion, and strew it over with flowers. All these acts, however, are seldom performed except by the priest; the ordinary worshipper only presenting an offering of eatables or flowers, performing an obeisance, or a prostration, and perhaps also walking round the idol. Sometimes they add voiciferous invocation, rapidly rhyming over all the names of their deity. New moons, eclipses, and such times are marked by special temple services; any public calamity increases the number of worshippers, and the value of offerings; and annually every god has his fête or Parasha, which calls forth offerings, processions, amusements, and immoralities.

In addition to the simple sacrifices already noticed, blood is often shed, though not by the Bramhans except in the case of human victims, such as the suttee. The earth is worshipped according to the usage of different tribes, with sacrifices of goats, children, or men; the first being by far the most numerous. To the goddess of disease, sheep and buffaloes are freely offered. To Karli, nothing seems acceptable but blood; he alone is devout who pepetrates at her altar some outrage either on himself or others. Not many years ago a priest of hers at Calcutta, showed his piety by averting the sacrificial knife from a sheep, and plunging it in his own

vitals. The only sacrifice at which the Bramhans take the life of an animal is that of the *Yajna;* but even here they do not shed blood, for the victim, a ram, is smothered and beaten to death. At this sacrifice, Bramhans of at least three Vedas, (according to some. of the four Vedas,) must be present, all being sumptuously entertained, and honoured with costly presents. These expenses cause this most august of sacrifices to be very rare. Human sacrifices, if in the form of voluntary immolation, are no way repugnant to Hinduism. By fire, by tortures, by drowning in sacred streams, by excessive restraint of the breath, or by the wheels of the holy car, the worshipper may devote his life, and thereby certainly earns paradise. Nor was the sacrifice of suttee always in the proper sense voluntary, though it was submitted to by the victim. Dubois asserts that the sacrifice of a girl was common among the Bramhans of the Atharva Veda, and he believes that "this horrible ceremony" is recognized by that book.

Of what may be called Supplementary Ritual, it would be impossible for us to speak. All the appliances of superstition abound, holy water, holy stones, holy earth, relics, rosaries, way-side oratories, and amulets. The amulet is generally a piece of silk thread, or a circle of some precious metal, placed on the arm with a prayer; and this protects from an evil eye, and from witches.

The great religious system of which we have now furnished a very imperfect review, has suffered both by dissensions and assaults. India has had its Lucians, who, in bold satire, have laughed at the Bramhans, Shastras, gods, and all their sacred things. It has also

had its sectaries, who, disowning the Bramhans, have established rival priesthoods, and rival shrines. Of these the Budhists have, long ago, been expelled from the Intra-Gangetic continent; but the Jains, the Linga worshippers, and several minor sects hold their ground. Were the sectaries of all Indian nations assembled together, the anti-Bramhanical host would appear formidable; but taking those nations as a whole, Bramhanism is their religion. It, however, varies much in its aspect, freely accommodating itself to local superstitions, provided that sacerdotal eminence is not impugned.

The first system, coming from without, that challenged Bramhanism was Christianity. It does not, however, appear to have made a powerful impression on any Indian country except Travancore, into which it was originally introduced. There it existed, and to some extent, throve, up to the era of European discovery. About eight centuries and a half ago Mohammedanism first formally reared its banner in India. Since then its votaries have won in the sacred land of the Bramhan magnificent triumphs, and resplendent empire. Consequently, scarce a village exists without some followers of the prophet; and in such countries as are still under a Mussulmaun prince, they form a considerable proportion of the people. But their numbers and their influence are on the wane; their own faith is corrupted by Hindu superstitions, and though an important section of the population, they still leave Bramhanism the religion of India. One important effect of their power is the diminished lustre of the native hierarchy. In the north, where their dominion was first established, and where it always held its centre,

Bramhanical pride and caste scruples are much abated. In the south, also, the same effects are visible but in a less degree, for there the foreign yoke was imposed much later and less completely. In some districts of the extreme south where the Bramhans were never fairly humbled by Mussulmaun rule, they bear themselves with a loftiness now unknown in the other parts of India.

The arrival of the Portuguese brought a fresh rival to the pretensions of the Bramhans. The new teachers had claims of a divine mission more distinct than the native sectaries, and more ancient than the Mussulmauns. They had also, with the people, the advantage of demanding but very inconsiderable changes. They called themselves Bramhans from the north, thus accounting for a lighter complexion and foreign tongue. They left caste untouched, image worship they slightly modified; but monasticism, penance, and processions were fully confirmed. Then the most nominal adhesion constituted discipleship; and all, of whatever character, who would submit to baptism were numbered with the flock. For a time their success was great; their numbers and their power became considerable. But, bitter internal dissensions, the proverbial bad character of their converts, and the rigours of their inquisition, combined to check their advance; and political influences becoming adverse large defections resulted.

When the Romish missions were in their decadence, a new agency entered the field. This was at first represented by a few Germans and Danes, men of simple mind and fervent zeal. When they had already begun to reap encouraging fruits in the south, fellow-labourers

appeared in Bengal. A poor and humble man in England had become inspired with the sublime resolution to attempt to confer on India the boon of Christianity. His work and his weapon were truth. He sought not to reconcile native superstitions and Christian laws, or to raise a host of untaught proselytes. He believed, in good faith, that truth existed under the sun; that to mix it with error, was to destroy its identity; and that God who gave it would make it prevail by its own mild light. Simply to spread that light was his task. In this he and his brethren in the south were one. They, each in his own sphere, brought into action three agencies hitherto little known in India as the instruments of Christianity, namely, the sermon, the book, and the school.

The surrender of a foreign flag to that of England flatters our pride, and when that surrender is made without bloodshed a Briton's heart is warmed. But one flag has, not long ago, been peacefully struck in favour of our own, which I would fain have had to wave while the world stands. There was a day when an English nobleman formed the resolution to drive our bright Christianity from the shores of India; because she disturbed native priestcraft, and exposed English crimes. The apostolic Carey, disowned by the standard of Britain, took shelter under that of Denmark, at Serampore. Our governor-general demanded that he should be delivered up! The noble Dane refused, and added that should the missionary be taken by force, he would strike the flag of his nation. That flag was respected; Carey pursued his work; helpers came to his side; the sermon, the book, the school multiplied them-

selves; an invisible hand passed over the thrones of India and levelled every barrier that shut out these three agents; until at this day they speak and spread wherever the churches will. I say again, that I should have loved that Danish flag to wave over Serampore to the world's end.

Bramhanism might still laugh at the Protestant missionaries, if it regarded only their numbers. Two or three hundred strangers attacking a system that has stood for three thousand years, and is defended by millions of hereditary priests, would not, ordinarily, cause alarm. But alarmed and disheartened the Bramhans are. The new teachers have met them in a way before unknown. They have published in nearly all their tongues another Shastra, of which the strange purity casts the very gods into disrepute. They command unheard-of lights of science, whereby they give dazzling proof that on every possible subject the Shastras abound in lies. They circulate, far and wide, books and pamphlets of immaculate ethics, and high doctrine; they carefully teach the young, and powerfully address the populace. Though so contemptible in numbers, they have about them a deep faith that they are sent of God, which in itself makes them terrible; and in ardent prayers they appeal to Almighty power to work in some wondrous ways the overthrow of all the Bramhans venerate. Already their zeal has made impression; and unlikely answers to their prayers have seemed to fall from above. The sacrifice of suttee, which appeared secure beyond any daring, is offered up no more; and the worthiest compatriots of the Bramhans join in the gratulation of their foes. The British government gave

to idolatry a powerful support, which being at once flattering to the crowd, advantageous to hierarchy, and gainful to the executive, seemed to be, as both governors and Bramhans wished it to be, perpetual. As though an invisible hand had moved at the prayers of the strangers, this support has sunk away. A law was administered by the tribunals, disinheriting every man who forsook the creed of his fathers. That law alone was a wall of fire around the altar of the Bramhan; but it has disappeared, and the most timid now may desert the ancient fanes, nor fear to be consumed.* Caste itself, old, they thought, as creation, and immutable as the hills, has begun to waver. The schools of the Christian teachers confer on base-born out-castes lights by which, in some respects, even the Bramhan is outshone; and now offices and honours are laid open to all who can make good the vulgar claim of ability. In many places too, the sacred rites of other times are openly laughed to scorn, the dread of the priest is gone; and that of the gods, passing away. Cases too, ever and anon occur in which the foreign creed is deliberately embraced, all persecutions being unheeded, by the apostate, and all argument foiled. Again and again the world hears of even a son of the sacerdotal line resigning the pride of his birthright, and meekly accepting from a foreign guru, the sign of discipleship in another faith. "It is foretold," does many a Bramhan say, "that in the degenerate *Kali Yuga*, a time will

* Since this was sent to press I have learned that, with a pusillanimity the most humbling, the law of religious freedom though *promulged* is still suspended; and we continue to make it a civil crime for a Hindu to become a Christian!

come when all power will pass from the hands of the Bramhans: and, alas, the time is come!" "It is foretold," will others say, "that in the degenerate *Kali Yuga*, a religion will come from the West, before which all others will disappear: and, alas, the time is come!"

In speaking of the decay of Hinduism it is undesirable to use expressions that may be misinterpreted. To say that its foundations crumble; that its sun has set; that its citadels capitulate; that it is feeble with age; that it lies on its death-bed, and similar metaphors, may, with the writer or speaker, have a clear and a just meaning. But a reader or hearer does not interpret language by previous information; he looks for information to language, and nine out of every ten will take from such expressions a meaning far beyond the truth; while not a few will expect to hear forthwith of the abolition of idolatry all over Hindustan. Now all that can truly be said is something to this purport: veneration for the Shastras, fear of the priests and belief in the divinity of caste have much declined, and are rapidly declining; around all the older mission stations great numbers despise the prevalent superstition; this feeling is fast extending; just views of Christianity and prepossessions in its favour are daily spreading; numbers of natives have embraced the Christian faith, and not a few are intelligent labourers in its cause; the building of a temple or other sign of vigour in Hinduism is rare; the Bramhans are generally alarmed; and all close observers find in their system marked symptoms of decadence. Thus much may, thank God, be safely stated of India as a whole. But it must be remembered that many Hindu nations have not, as yet, received

from Christianity the least impulse, except in an indirect way. Perhaps it could not be affirmed that, in any one country of Hindustan, Bramhanism and caste hold at present ground equally high with that which they occupied fifty years ago. But in several of those countries the change is very slight, and not the result of direct Christian labours, for these have not been given; but the result of political changes, of such public measures as Christian influence has won, and of the insensible spread of new feelings. That Bramhanism is declining cannot be denied, nor do any admit it more fully than the Bramhans themselves.

But we could not fairly estimate the extent to which Hinduism has been impaired, or is likely to be impaired, by Christianity, without noting the proofs of growth exhibited by the latter. The appearance of that excellent compendium, the Year-Book of Missions, puts the public in a condition to do this such as it has not enjoyed before. Within the last ten years the number of missionaries has rapidly increased, so that now nearly three hundred are in the field. This number includes many Germans and Americans, who nobly join with us in the effort to Christianize the nations committed by Providence to our more special responsibility. Under these three hundred missionaries a large number of natives are employed in diffusing the gospel. Some of them are fully invested with the Christian ministry, which they worthily sustain; many act as catechists, and still more as schoolmasters. Taken altogether, they would number about a thousand; but of the schoolmasters several are not Christians, but only employed to give secular instruction in establishments conducted for

the purpose of inculcating Christian doctrine. The statistical returns of some missionary societies are so defective, as to leave it impossible, even with such aid as the Year-Book of Missions, to state precisely the amount of agency; or to state even proximately, the number of actual converts. With regard to the latter, all who have attentively observed Indian missions are aware that, taking them in all, the last seven years have been fruitful above all that went before. In various parts of the north, though no general movement has occurred, gratifying numbers have been added to the churches by individual conversion. But the scene of chief success has been in the extreme south, in the province of Tinnevelly. This province, though having only a population under a million, has received special care from the two societies connected with the Church of England; which, taken together, have there at present about thirty missionaries. On one station we find a missionary, nine native catechists, and twenty-eight native teachers; on another, a missionary, sixteen native catechists, and twenty-four native teachers; and others in similar strength. One missionary gives returns "showing an increase of seven hundred and ninety-seven during the year;" another says, "no fewer than one thousand four hundred and two souls have embraced the Christian religion during the last six months." Another shows "an increase of six thousand five hundred and eighty souls brought, in one year, out of the darkness of heathenism to the light of the gospel." Another states, "by comparing the returns for 1844, with those of the past year, there is an increase of a thousand converts." The Bishop of Madras says, "In

four years and a half the Christian community of Tinnevelly has doubled itself, the increase during that period being equal to the total increase of fifty-four years that preceded it." The converts are of two classes, the baptized, and those under instruction, that is, who have renounced heathenism, but have not yet been admitted to baptism. After an extraordinary movement, by which, in four years, eighteen thousand persons had renounced idolatry, the heathen became enraged, and violently persecuted the converts. During these severities many who had been baptized drew back; but even then the number of the baptized steadily increased; and now the prospects are brighter than ever. One missionary makes a statement very remarkable for India:—"There are comparatively few heathen in the eight villages forming the Athiseyapooram district." Again, "At the morning service *all* the inhabitants of Panneivilei joined the congregation, at the head of them an old Pandaram," *pilgrim monk*. Though these converts are poor,—not as poverty is understood in England, but as it is understood in India, where the wages of one of our mechanics would be a gentleman's revenue; they have liberally raised subscriptions for "Poor Funds, Tract and Book Societies," and "other charitable and religious objects." Several substantial churches have been built by their own money, some villages raising as much as four hundred and fifty or five hundred and fifty rupees (forty-five, or fifty-five pounds,) sums, I will venture to say, that no one would have imagined it possible to raise for any disinterested object. It is to be regretted that the returns do not enable us to specify exactly the number of baptized con-

verts; but so far as I can gather they must be nearly thirty thousand, or about one thousand, on the average, under the care of each missionary. The Bishop of Madras has such a view of the present opening in Tinnevelly, that he does not doubt that any additional missionaries sent thither would each "collect around him a congregation of one thousand or one thousand five hundred souls in a few months." It is to be hoped that the two societies whose labours have been so blessed of the Lord, may be enabled to prosecute, with still greater strength, the glorious beginnings already made.

In the adjacent province of Travancore, the missions of the London Society have a most encouraging position. Seventeen thousand persons are returned as regularly under instruction, with a hopeful array of schools, congregations, church-members, and bible-classes. In one village "twelve families have, in a year, openly declared themselves Christians;" in another district "there has been an addition of one hundred and forty-seven families, to those who have assumed the profession of Christianity; while the church and schools have been proportionably augmented." Those who know the Hindus will regard as a strong proof of the reality of their convictions the fact, that on one station they have contributed two hundred and seventy pounds "for the support and spread of the gospel." In this province, also, the Church Missionary Society is labouring with great effect.

"Do you seriously believe that India will be converted to Christianity?" is a very natural question. If put by a man of the world, I should reply to it by asking, Do you seriously believe that a people so rational

and enquiring as the Hindus will for ever worship stocks, cows, birds, monkeys, and snakes? Do you seriously believe that they can long continue to do so after the light of Christianity has reached them? But if that question come from a Christian, I reply, Yes: and Do you seriously doubt that the power which converted your soul is unequal to the conversion of the Hindus? I do seriously and joyfully believe that the rapid conquest gained over India by British arms, is the preparation and will prove the type of the conquest to be gained over it by the glorious gospel. "If," said the venerable Bishop of Calcutta, preaching before the Church Missionary Society, "the succeeding ten years should be blessed at the same ratio as the last ten, half a million of souls would be brought under Christian instruction in India alone, and at the end of a period equal to the length of the Society's past labours (say forty years) the whole population of British Hindustan would be the Lord's." Nor can this chapter be more impressively closed than in the sage and moving words of that same apostolic discourse:—"And yet we are inert. The immense number of families enriched by India are asleep. The spiritual church shrinks back. Selfishness lays its icy hand on the warm seat of life. The mother starts at the thought of parting with her beloved son. The kindred interpose between Christ and the testimony of his blood before the nations. Our universities and colleges refuse the flower of their students. . . . . An outburst of inquiry is beginning. India is in a state of transition from a prostrate, timid, slavish apathy, to thought, activity, and enterprise. . . . . God is at work. I firmly believe that, from the

first promulgation of the gospel, a crisis of such importance as the present, for the salvation of such a population as India, has not occurred. Occupy it then. Not a moment is to be lost. Eternity presses on. Souls are perishing."

CHAPTER X.

THE RETURN.

Deaths—Parting—Our Ship and our Party—Combats—Faults and Misfortunes—Marine Theology—The Night of Vigil—The Day of Burials—Begging Bread—Professional Consolation—Making Land—Mistake—The African Coast—Doubts and Peerings—The Evening Bell—Wynberg—African Omnibus—Cape Town—Lifting Anchor—Perils and Resolutions—Help in Time of Need—Short Commons—Owners and Men—Large Leakage—The Denial and the Promise—The last Shot of the Locker—Hesitation—Providential Escape—The Change of Ship—The desired Haven.

The work of our mission was proceeding peacefully, when one Saturday night, the eldest child of my excellent colleague, Mr. Male, was seized with croup. Medical aid there was none within two days' journey. During the Sabbath night, the child died, and we buried him the day following. On the next morning my eyes were slightly inflamed, and incapable of reading. In a few days the inflammation disappeared; but the weakness continued. After a month had passed, hoping for advantage from a change, I joined Mr. Squarebridge at Coongull. We spent a happy week in brotherly intercourse, in preaching to the heathen, and in praying for their conversion. On the day fixed for my return, we came to Heboor, a large town lying between Goobbee and Coongull, where we spent the morning in preaching, and intended that in the evening each should return to his station. In the afternoon a messenger brought the

painful news that Mr. Male's only remaining child, a little girl a few months old, was alarmingly ill with the same disease that had carried off her brother. We started instantly, and rode fast, praying that the Lord would spare this second blow to hearts already wounded. On nearing the mission-house, we passed the grave of the little boy: beside it two men were digging another.

A few months afterwards, a breathless messenger presented a note from Coongull. It informed us that the cholera, then raging in the place, had seized Mr. Squarebridge. Mr. Male instantly hastened to join him. The next morning we learned that a brother most dearly beloved had passed from the fellowship of our toils to that of the Redeemer's glory.

The affection of my eyes continued to resist all efforts for its removal. Perfect rest from study, the best advice in Bangalore and Madras,* and the salubrious air of the Neilgherri-Hills, all failed to make the least impression. The medical men unanimously declared that I must leave the country, predicting a certain recovery in England; but also insisting that a return to the tropics would be followed by a relapse. On April 20th, 1841, I embarked at Madras, bidding farewell to the land where I had hoped "to spend and be spent" preaching Christ, My feelings at the time I find thus expressed in a letter to a relative, written on board:— "You may think that it savours little of affection to

* Missionaries owe a debt to the medical officers of the Indian army; who, in the most generous way, give them their best attentions without fee. I shall ever remember the kindness of Mr. Smith, Mr. Hay, and the late lamented Dr. Lane.

say, that I left the shores of India, and turned my face toward home, with the deepest regret. This, however, did not arise from any want of attachment to home or friends; but the people of my mission had become inexpressibly dear to me: I saw their woeful need of the gospel, and longed to spend my life in making it known to them. Gladly would I have resigned every hope of seeing in this life a single relation, had the Lord only counted me worthy to preach among the Gentiles the unsearchable riches of Christ. But his will was otherwise."

Our ship formed a strong contrast with the one in which I had gone out. Small, old, and of unpromising appearance, she obtained passengers only because it happened that there was no other vessel for England at the time. My cabin measured five feet eleven by four feet six, with an aperture of about six inches in diameter for light and air. Here were accommodated bed, toilet and clothes for a voyage of (it was expected) four months. The straitness of the dimensions ensured this advantage, that you always put a thing in its own place, because there was no other. In temperate weather one was very comfortable; but in the tropics it was otherwise, and to remain long with a closed door was impossible, especially at first, when the place was scented by a rich coat of fresh white paint.

Our party consisted of Mr. Beauchamp, a civilian proceeding to the Cape for his health; Mr. M'Dowall, a fine young officer of cavalry, suffering from diseased liver; Dr. Boeke, of the Danish garrison of Tranquebar, returning to Europe with a constitution shattered by cholera; and two orphan children of an officer lately

deceased. A young man of highly respectable connexions was a steerage passenger. The captain also had on board his wife and a little daughter; the former of whom was suffering from dysentery, which had attacked her at Madras.

For the first week the air was almost still, with a cloudless sky, and vertical sun; the heat was extreme; but the sea appeared to revive us all, while the captain's wife and Mr. M'Dowall observably improved. At length a good breeze relieved us from the intense heat, and the discomfort of inaction; but, at the same time, made the disclosure, that our ship was a most wretched sailer, and, moreover, leaky. With regard to the former, the captain assured us that, "though she was slow, she was sure;" and, with regard to the latter, that we need apprehend no danger, for the leak was "all in the upper seams." We were very soon led to suspect that we should have no more reason to congratulate ourselves on the commissariat of our good ship than on her speed and tightness.

One day, while seated at dinner, we heard "Ned" repeatedly called with such emphasis, that it seemed impossible that any one on board should fail to hear, whether asleep or awake. "Ned" did not answer. During the morning the second mate and several of the men had been in the after-hold stowing the ship's stores. The chief mate, apparently suspecting that "Ned" was among the stores, suddenly started from the table, and dashing down a hatch, soon emerged, dragging with him a tall, lumbering young sailor, who was evidently intoxicated, and whom he was greeting in terms of the least imaginable suavity. "Ned" had scarcely gained

the deck before we heard a violent struggle. To exonerate himself, he had declared that the second mate had given him the spirits, whereupon that officer struck him, and, in return, received a very unhandsome black eye. It proved that he had intoxicated himself and every man on board but two or three. He was degraded on the spot, and ordered to go before the mast,* which order he peremptorily refused to obey. In the evening we had a second disturbance, between the captain and a quiet, inoffensive sailor, who had fallen into the same snare as the others. The captain upbraided "Jim" for being drunk; "Jim" retorted by a remark not complimentary to the captain's abstinence; and immediately ensued a hand-to-hand contest. "Jim" tore the captain's shirt off his back; but the captain hurled him bodily down the after-hatch. A man was sent down after him to put him in irons, who, during the operation, moralized for our comfort, by saying, "A pretty mess we shall be in if a squall takes us, and not a hand to furl a sail." Mercifully, we had no squall. In the morning the men were "called aft:"† in the presence of Mr. Beauchamp and myself, the captain explained the aggravated character of their offence; at his request, Mr. Beauchamp read the ship's articles, in which they had promised good conduct. We then said a word or two, urging them to observe the articles in future; after which "Jim" was removed from irons, and they were all pardoned but the mate, against whom the sentence of degradation was confirmed. He persisted in refusing to go before the mast, and conse-

* To take the place of a common sailor.
† Summoned to the quarter-deck.

quently remained idle. The ship's articles apprized us that her registered tonnage, instead of four hundred, as had been advertised, was two hundred and sixty; that the crew shipped in London, mates, men, and all except an apprentice, had deserted at Van Diemen's Land; and that of our present hands only three were able seamen. The others were various: one was a joiner, another a barber, another a butcher. The whole voyage had been disastrous. Sailing from London for Launceston, (V. D.,) with a full complement of passengers, the passage had been spent in wretched disputes, and terminated by being driven ashore near their port. The vessel was saved, but none of the crew waited to take their homeward passage in her. She was ordered to the Burmese coast for a cargo of timber; but after several adventures among the Nicobar Islands, found herself on the west side of the Bay of Bengal instead of the east, at Madras instead of Moulmein,—two ports as far apart as Plymouth and Lisbon. A carpenter had been shipped at Launceston, who was accompanied by his wife: while they lay at Madras intrigues and disputes arose, during which she leaped overboard at midnight, and was seen no more. Her husband left the ship, which, leaky as she was, thus remained without a carpenter.

From the first, we had two services every Sabbath. The state of my eyes disabled me from reading; but my excellent fellow-passenger, Mr. Beauchamp, admirably performed that part of the service. The men usually heard with attention; but their ignorance and thoughtlessness were lamentable. The first Monday evening of the voyage, seeing them at tea, I went and

entered into conversation. "Ned," who has already been introduced, said, "We was just a talkin' about your sermon, sir; and Tom P." (for we had three Toms) "says as how you said it was never too late to repent; and so he says we needn't trouble our heads about it; it'll be time enough any day. Now I says, that what you meant was, that the sooner we do it the better for us." "Yes," replied Tom, smiling incredulously, "Ned says he does it every day." Turning to Ned for his explanation, he said, with unusual gravity, "Well, sir, the last time I was at home, my mother took me to the Methodist chapel, and ever since then, every night when I turns in, I says a prayer; and so, you see, sir, I clears off as I goes on." Poor Ned evidently thought that he thus obeyed the call received at the Methodist chapel, and took all needful steps for his salvation. They paid much attention to my remarks, and at all times were willing to be instructed.

The convalescence of the captain's wife soon proved to be deceptive: her disease made rapid progress; and Dr. Boeke, who paid all possible attention, found such deficiency in both the medicine-chest and the steward's pantry, that he had neither the remedies nor the cordials necessary. She died; and a melancholy death-bed it was; by it I watched, and prayed, and mourned. We committed her to the deep with heavy hearts, fearing that we should soon have other burials. Shortly before her death, the captain had fallen seriously ill; and about the same time Mr. M'Dowall had a frightful relapse. The illness of the latter gradually assumed a fatal aspect; that of the former exhibited unaccountable fluctuations. Mr. M'Dowall was "the only son of his

mother, and she a widow." Almost to the very last, he anticipated recovery: only a few days before his end, he said to me, "I do not feel like a dying man." This very expectation of life made more striking the evidences which he gave of sincere repentance. From the first he showed tenderness of heart, and readily heard of the things of God. Mr. Beauchamp was unremitting in his attentions, and most happy in his influence. He lent him Legh Richmond's "Annals of the Poor," which he eagerly read, and said, with much simplicity, "I feel just as that young cottager felt." I can see him now, as he lay on his couch pale and feeble, turning on me a look of timid anxiety, and asking, "Do you think there is any hope for me?" Gradually his conviction of sin, his sorrow for the past, his thirst for mercy, became stronger; and at length gave place to a sober, but most cheerful, reliance on the Saviour's blood. Still anticipating life, he spoke with dread of its temptations; and, with a pleasing distrust of his own strength, expressed his earnest hope that God would give him grace to resist the world, and follow only Christ. When convinced that all prospect of recovery was past, he peacefully accepted the alternative, and continued to rest upon Christ, cherishing sweet hopes of heaven. I watched by him the last night: he lay still as death, and from moment to moment I waited to see the end. There was no sound but the ripple of the waters as the ship glided through: the lamp, agitated by the motion of the vessel, cast a wavy light on his wan features, which, in every interval of consciousness, quietly beamed with hope, and even in those slumbers, so like death, and so near it, were

sweetly peaceful. Separated only by a thin partition, and watched over by a sailor, was the captain at the point of death. I occasionally went in during the night: there lay he who had lately been so strong, incapable of life's least action, utterly insensible, and occasionally emitting a childish whine. In the one cabin and in the other the sufferer was at the very brink, and none could tell which would first be launched upon the viewless ocean. Just as I was alternately watching the dying looks of the young soldier, and the morning light coming in at the cabin window, my fellow-watcher came to say the captain was no more. About noon we committed him to the wide grave, in which a fortnight before we had laid his wife: his little girl was with us to see her father disappear in the same waters where her mother had so lately gone. We had but just returned from this mournful scene, when poor M'Dowall passed away, to use the words of his final message to his mother, "in hope of everlasting life." "In sure and certain hope of a joyful resurrection," we watched him into the peaceful wave; and felt that the joy of that sure hope gratefully lightened a dark and cloudy day.

Such a state of feeling had unhappily existed between the captain and his officers, that when he became ill, he would not permit the mate to use his chronometers, which he kept in is own cabin. We soon discovered that they had run down. All who know anything of navigation are well aware that, without a chronometer, it is impossible to ascertain your longitude at sea. However certain of your latitude, the chronometer alone can enable you to determine whether you are nearer the Cape of Good Hope or Swan-River, St.

Helena or Bahia, the Cape Verds or the Antilles.* We were thrown into no little trepidation. Providentially, Mr. Beauchamp had set his watch by the best chronometer a few days before; and the mate using it, decided that the nearest land was the island of Rodriguez, for which we accordingly shaped our course. To our great surprise, we fell in with the island the next morning; for we had not expected to do so until after at least another day's sail. Now, knowing exactly our position, we resumed our course. The next day we rejoiced to see a sail; for though in so early a stage of the voyage, our provisions were already short. We had killed the last sheep the day we crossed the Line; the few remaining fowls had for some time been in reserve for the sick; and bread, and many other articles, were either wanting, or of a quality utterly unfit for persons in delicate health. It was at once resolved to apply to the stranger. The captain was dying, the second mate was off duty, and the first mate had to abide by the ship: it fell upon me to take charge of a boat, though little accustomed to command on the high seas. Mr. Beauchamp, judging that our "owner" would be as well pleased that our comforts should cost him nothing, put me in a condition to pay for whatever we might obtain, by giving me a blank check on his agents. The doctor accompanied me, in hope of finding some medicines. The stranger

* The method is very simple. The chronometer keeps Greenwich time. You observe the sun at noon, and for every minute that he reaches the meridian before your chronometer points to twelve, you are one-fourth of a degree to the east, for every minute after, one-fourth of a degree to the west, of Greenwich. Every four minutes of difference between the sun and the chronometer is a degree; every hour, fifteen degrees.

proved to be a Scotch barque, without passengers, and bound for the Mauritius. Being so near her port, the stores were low: one solitary fowl was the only live stock; this the captain offered, but we declined it. We obtained two bags of yams, and one of bread; while the doctor, besides some drugs, found one bottle of port wine, and one of brandy,—both of which articles were *desiderata* in our ship. The bread, though common sailors' biscuit, was free from vermin, and therefore a most welcome addition to our luxuries.

By this time our regular leakage, when we had anything of a breeze, was seven inches per hour. The pumps were of the old up-and-down model, and drew off the water slowly; so that every hour the men had a long "spell," against the labour of which they murmured sorely; sometimes expressing their fears that the "old basket" (a term applied to a leaky, as "tub" is to a slow, vessel) was bound for the bottom; and often wishing that they had the "owner" at the pump, promising him such entertainment as would teach him not to deal in leaky ships. So long as the poor captain was about, he firmly defended the character of his vessel; averring that she was the best craft his "owner" had ever possessed; that he had brought home three leaky ships for him, and he would bring her home; and that she would make a good passage of it yet. To console us for the scantiness of provisions, he assured us that, on the voyage to Van-Diemen's Land, they had lived with even lavish profusion.

It was the most stormy season of the year when we neared the Cape; and there was every reason to fear that one severe gale would increase the leak to a fatal

amount. When approaching the land, a fine stiff breeze, lasting for three successive days, sorely tried our pumps, and made the men more than once exclaim, "If we get her into port, it will be the greatest mercy that ever was!" but it is also sped us forward; and, after bringing us close upon the land, fell into a mild breeze. Our navigation was not remarkably accurate; wide discrepancies frequently occurred between the reckoning of two successive days; but it was all laid upon the currents. To-day the current would set us half a degree to the east; tomorrow, two degrees to the west! This made an approach to land rather anxious; for though, in the wide sea, one can very well afford to blunder a few degrees, it will not do for a dangerous coast. No one on board had been into the Cape; nor had we "Horsburgh," that faithful guide to eastern navigation; but, instead, we had the remains of a Directory, venerable, if not for authority, at least for age. One day the mate confidently predicted that we should "sight the land" before sunset: two or three times the men thought they saw it; but soon reported that it had been "Cape Fly-away;" and sunset came without any land. We stood on, with a brilliant moon. About one o'clock in the morning, the mate called me to see the ship "hove-to close under the land." There lay the little barque riding the waves, with her sails glistening in the moon: close by, against the deep blue heaven, was reared a pile of black cliffs, skirted at the base by a waving line of white, where the breakers were loudly sounding. The mate said we were off the mouth of False-Bay, and only waiting for the morning, to enter. We presently saw a sail just to the eastward; and a

trim schooner, sweeping along, in the moonlight, with exquisite grace, passed close by us. I advised the mate to speak her; but we had no trumpet! and though she came so close, that he might have put a question without it, he felt so confident of his position, that he did not think it worth while. Not being equally confident, I watched the direction of the schooner; and left the deck with an impression, that if we were in the mouth of False-Bay, she was standing right for the rocks, and this I deemed the less probable alternative of the two.

On the western coast of Africa, about thirty miles from its southern extremity, is Table-Bay; immediately to the east of that extremity is False-Bay: Cape-Town is situated on the former, Simon's-Town on the latter. The neck of land between the two bays is about twenty miles wide; and the strip of land, which they form into a little peninsula, is an elevated ridge running for about thirty miles from north to south, and terminating on the north in Table-Mountain, on the south in the Cape of Good Hope. Table-Bay is exposed to the gales which prevail in winter, and is then unsafe; False-Bay, being sheltered from those gales, is at that season the preferable harbour. Arriving in the depth of the southern winter, (July,) we made for False-Bay.

In the morning I found that a thick fog concealed the whole coast, except a low headland to the east, and a flat-headed eminence, for which we appeared to be steering. A curvature was observable; but it at once struck me as being far too slight to answer to an opening so spacious as False-Bay. The more I looked, the stronger this doubt became; till at length I ventured to express it. The mate assured me we were entering the

bay. "That," pointing to the low headland, "is Cape Lagullas; and that," pointing to the eminence, "is Table-Mountain." "Why," I replied, "Cape Lagullas and Table-Mountain are ninety miles apart: it is impossible we should see them both at the same time." Rather embarrassed, he went below; and, on returning, said," I have examined the chart, and no other part of the coast answers to the bearings." I presently consulted the chart and Directory, which convinced me that our "Table Mountain" was the Gunner's Quoin, situated seventy miles from that celebrated elevation. Returning on deck, I found we were rapidly nearing the coast; on our larboard, the land was seen very distinctly; we could hear the surf rolling; but before us the mist covered all, except "Table Mountain." The oldest of the sailors happened to pass me, and grumbled, "I wonder where we're a goin' to: there's no bay there, I know." Thus confirmed in the impression already made by the coast and the chart, I asked whether the high land might not be the Gunner's Quoin. The mate was piqued, asserted that he was right, and added, "You may depend that you will dine in Simon's-Town." Most willing to believe what was so desirable, though unable to reconcile appearances, I went below to arrange matters for landing. In a few minutes, Mr. Beauchamp came down, smiling, and said, "The fog has cleared away: there is no bay, and 'Table-Mountain' is the Gunner's Quoin." We were now inside a long reef of rocks; and had the wind either increased or changed, should have been placed in circumstances the least desirable. But Providence favoured us; the wind blew steadily from the safest

quarter, presently the heavy old ship was clear of the breakers: and we began to run along the coast towards the west.

The day and the scene were charming: the bluff, blue headlands stood up boldly between sea and sky, the wind swept along with equable vigour, the sea rolled in full round waves, and the sky glowed as on a bright May-day in England. Ever and anon, in the west, we observed a blue speck in the sea, cut off by the waves from the line of coast; but as we approached it rose and spread, till at length it stood out in full view, not an island, but a sea-side hill. Towards evening, one of these appeared far beyond the most distant point in the continuous range of coast, and evidently not in the same line. Its insular character appeared unquestionable; and yet the chart did not indicate an island there. Presently a second island appeared by its side: the chart was still at fault. The sun was hasting down; it was the very season for those terrible "south-westers, which lay so many gallant ships on that hard coast; and this unexpected island perplexed us as to our position. We eagerly resorted to the old Directory: a hint was discovered, that, in coming from the east, the Cape itself first appears like an island; the rapid rise out of the sea of a line of coast running north and south, and terminating in the supposed island, satisfied us that this solution of the difficulty, which was so welcome, was also true. We no longer doubted that we were in the mouth of our "desired haven;" and, fearful to risk a gale in the bay during the night, we hove-to.

The following morning was foggy, with scarcely any wind: we crept slowly up the bay, straining our eyes,

and teasing our glasses, to distinguish Table-Mountain; but in vain. That celebrated land-mark was not to be found; and though all other appearances accredited False-Bay, we felt a slight misgiving. "Where is Table-Mountain?" asked every one; and no one could answer. Could it be possible that we were wrong again? Most narrowly we scanned every lineament of the hill-tops; but could find no table. As we approached nearer and nearer to the north-west corner of the bay, where we ought to find Simon's-Town, our anxiety to discover the decisive land-mark increased; but no trace of it appeared. At length, on the bleak side of the mountain, we observed a solitary patch of white, like a cottage; and, examined by the glass, it proved to be a neat little house, commanding the entrance of the bay, and apparently of European mould: but no other habitation of man was visible. About the same moment, some one declared he fancied that he saw the masts of a ship: this was denied, corroborated, denied again, and finally confirmed by the glass. Presently some one announced a buoy: the mate, turning his glass on the spot, declared it a buoy with a flag; but it proved to be a boat, bearing the owner of the cottage on the mountain-side, who sailed under the welcome colours of the British pilot-flag. One of the first questions asked him was, "Where is Table-Mountain?" "What!" said he, with an air of surprise, "did you expect to see Table-Mountain from False-Bay? You must get to the other side of the Cape, first." The fault was chargeable partly on our own ignorance, partly on a miserable Directory. Just as twilight was falling on the hills which all along the bay rise

precipitously from the water's edge, they broke off into an equally precipitous crescent, within the arms of which lay a smooth basin, where rode two large Indiamen, and a man-of-war brig. Simon's-Town ran for a considerable distance round the foot of the concave hill, and at some points stretched up its sides: one building stood above all the rest, and from it the sabbath-bell was chiming. Those were the very tones that, at the close of an anxious voyage, one would have wished to hear first from the land. I little thought that they were calling a congregation to the funeral sermon of one whom I had seen depart from England in the full vigour of youth; but so it was. That building was the Wesleyan chapel; and that night the people were admonished to profit by the early removal of Mr. Goodrick, one of their pastors, who had just closed a career bright with unusual piety and zeal. The sound of the bell made me long to be there; but the necessity of waiting till the ship had been visited by a medical officer, prevented our landing that night.

The two large Indiamen had just arrived, and both of them had suffered heavily in storms off the Cape. The larger of the two, a noble ship of one thousand four hundred tons, had lost her fore and mizen topmasts, and her main top-gallant-mast, beside having one of her officers carried overboard. As it was almost certain that our crazy barque would have perished in such a storm, we saw more and more our debt to that Providence which had sheltered us from it, though coming from the same direction as the vessels that encountered it, and nearly at the same time.

Simon's-Town is a neat, quiet, little place; but we

remained there only long enough to procure a conveyance to Cape-Town. Our driver was a Malay, insinuating, talkative, and sinister; greatly in love with the English, and no admirer of the Dutch: how he would have found his taste had his passengers been of the latter nation, I cannot answer. His countrymen exist in considerable numbers at the Cape; the Dutch having draughted into that colony, as into Ceylon, Malay regiments from Java. They preserve their costume, their language, and their Mohammedanism. Wynberg, lying between Simon's-Town and Cape-Town, is a lovely village; a charming medium between England and India, with many of the beauties of the one and of the other, and yet presenting a whole different from both. Near it lies Constantia, celebrated for its luscious wine. Wynberg offers a delightful residence to the convalescent "Indians," who resort in great numbers to the Cape. I stopped here to see Captain Dobbs, who had been compelled by ill health to leave India, about a year and a half before; and was delighted to find him with looks far different from those with which I had seen him start from Toomcoor. It was just the hour for a religious meeting at the house of one of his friends: I joined with lively delight a numerous company, composed chiefly of gentlemen from India, with their ladies, and heard the excellent captain give them a faithful exhortation to holiness of life.

The locomotive genius of the age is displayed even at Wynberg: I travelled thence to Cape-Town in an omnibus! an omnibus, it is true, that would look primitive beside its London prototypes; but, at the same time, tr velling with creditable celerity. I met with

reception truly brotherly from the excellent Mr. Hodgson. Cape-Town is well built and clean, with streets of tolerable width, in some cases shaded by rows of oak and elm. The grouping in the streets is singularly varied: Europe, Asia, and America meet upon the soil of Africa. Perhaps in the very same street, and blended in picturesque relations, you see the free, familiar air of the Englishman; the conical cap and eastern countenance of the Malay; the lusty Dutch burgher; the British soldier; the turbaned Hindu, who has followed his master from India; the elegant European carriage; the semi-savage air of the Brazilian slave-dealer, apparently cursing the English for having robbed him of his prey; the comfortable, well-clad Dutch housewife; the waggon drawn heavily by twelve, fourteen, or sixteen giant bullocks, with wide, rambling horns, and driven by a Hottentot whom English generosity has lifted out of slavery; the wiry frame and swarthy visage of the Anglo-American; the tall cap and flowing robe of a Persian horse-dealer; the dark, meanly-clad African woman; and the light waggon drawn by eight horses, a farmer driving the eight in hand at a smart trot, while an assistant by his side has charge of the whip. To the east of the town, and commanding the bay, stands the castle, an extensive pentagonal fortress, having a deep fosse, regular outworks, and a rampart connecting it with two forts which lie farther to the east. On the other side of the town, Table-Mountain rises to the height of three thousand five hundred and sixty-seven feet, having the first nine hundred feet of vertical schistus, the next nine hundred of granite, then two hundred of horizontal red sandstone, and from that

to the top an indurated sandstone, white, and embedding numerous pieces of quartz. Upon it are said to be found nearly thirty different varieties of heath. Table-Bay, spacious, and flanked on either side by bold rugged hills, has at its mouth an island of considerable size, which serves as a penal station; and beyond it spread the waters of the wide Atlantic. From that bay, forty years ago,* the peaceful and saintly Henry Martyn watched the British forces drive, from height to height, the Dutch, defending in vain, for the second and last time, this possession which they had held for a century and a half. The English, Scotch, and Dutch churches in the town are supported by government. The only religious service which I had the opportunity of attending was a Dutch prayer meeting conducted by Mr. Hodgson. The language was unknown to me, and the faces nearly all black; but the attendance was good, and seemed to be pervaded by a spirit of fervent devotion.

After a stay of only two days, we were recalled to Simon's-Town. The mate (henceforth to be called the captain) assured us that the faulty seams had been discovered and caulked, and that he had laid in ample stores. The wind detained us for some days, during which I received the utmost hospitality from a Dutch family, and preached twice in our neat chapel to congregations composed of English, Irish, Scotch, Dutch, Hottentot, Boshmen, and Mosambiques. One day entering the shop of Lloyd's agent, I heard the captain in high debate with the man he had employed to caulk the ship: "You will have a pretty sight of leakage on

* In 1806.

the way home, I know," said the shipwright. "We have got some pumps aboard," replied the captain. "You will have need of them," rejoined the other. This was not encouraging. The second mate had been restored to his office on the captain's death; but at the Cape he and the other quarrelled, and he took leave, as did also the invalid sailor. Glad to secure any aid, we shipped in their place a policeman, who said he was a sailor, and really proved to be the best hand on board. After a few days one of the other men was made first, and he second, mate. When the order to weigh anchor was given, the men refused, alleging that the crew was "short," the stores insufficient, and the caulking effected little worth. The captain was by far the most powerful man on board, with a fierce look, a thundering voice, little delicacy, and abundant resolution. He soon terrified the men into "duty;" but we had not been long under weigh before we found that the leak was nearly as bad as ever: long before the pilot left, we had copious pumpings. The men looked disheartened: some said, "I told you how it 'ud be, but ye would up anchor;" and the new man called himself "a fool" for having engaged without first coming on board; "for," said he, (alluding to the brightness acquired by the irons of a hard-worked pump,) "one wink at the pump-gear would have cured me." All this made me seriously doubt whether to put to sea in such a ship were not tempting Providence; and for some time I felt strongly disposed to return with the pilot, but at last yielded to the fear of seeming afraid. For some days we loitered along with light winds, but in about a week were met by a strong breeze from the north: the ship laboured

hard, leaking in proportion, and we pumped every hour. I was exceedingly sea-sick, for that affliction followed me to the very last day of the voyage; and, lying on my berth, I heard the long and frequent pumpings. Some time after night, amidst the whistling of the wind, the dashing of the waves, and the creaking of the ship, the clink, clink, clink of the pump sounded long and drearily. At length the second mate came down, and said to the captain, who was in the cabin, "We can't get her to suck, sir." "Pump till you can." Up he went, but soon returned, "We can't get her to suck, sir." "How long have you been pumping?" "More than twenty minutes." "When did you pump last?" "At eight bells"* (an hour before). They went up together, and the pumping continued. I soon rose: it was solemn to kneel down on that dark night amid the groaning of the unquiet ship, and the cheerless sound of the pump, which some despairing exclamations coming from the deck made to sound like a knell. To commit myself, for life or death, into my Redeemer's hand, was the work of a moment; then the souls of those who were with me in the ship called for anxious prayer; but one feeling, concern for the perishing Hindus, rose above every other, and expressed itself with a force, the effect of which, I pray, may never be lost, in a resolution, that, if my moments on earth should be but few, I would devote them to prayer, and, if lengthened, no matter in what land, to labour, for their regeneration. On deck the night was dark, the

* Eight o'clock. A bell is struck one stroke for every half hour: "eight bells" always announces the close of a watch, each of which is four hours long.

wind boisterous. and the sailors uttering broken murmurs of despondency. Presently they cried joyfully, "She sucks!" An inquiry ensued, on which it appeared that they had been thirty-six minutes pumping out the leakage of a single hour. The men demanded with one voice that we should put back; but the captain informed them, in no meek terms, that he would do nothing of the kind. "But we cannot keep her afloat." "We have got some boats to take to." "Little chance here in such boats as them." "Well, we shan't put back, I can tell you: my life is no more than another dog's." We could not account for it; but the next hour the leak fell back to six or seven inches; the wind became fair soon after, and for six weeks from that night we had not a foul breeze nor a rough one.

The provisioning effected at the Cape was of a piece with the caulking: for the cabin-table, including five adults and three children, the whole store of bread, for a voyage of ten weeks, was a hundred pounds of biscuits: we consoled ourselves by the hope of a supply at St. Helena. One day, when all above and below was glowing with the utmost beauty, the captain announced that about three o'clock we should sight the island. Three o'clock came, a man went to the masthead, the captain paced the deck and watched; we all did the same; but the sun set on a bright circle of unbroken water. We then made for Ascension: in a few days our observations indicated the Isle of Turtles as right a-head: we waited patiently for its appearance; but it came not. Those naughty currents, which had

played us so many strange tricks in making land before, were at work again!

The men were now eating, for bread, the residue of what had been on board when the ship was stranded, which had been then damaged with the salt water, had afterwards been carried in bags about the tropics for several months, and was now nothing more than a mass of animated powder, with occasional bits of indurated biscuit too hard even for the vermin. How they managed to eat it, and how they lived after eating it, was a mystery. For our part, we had old ship-biscuit of the common kind, abounding in maggots. and in monstrous brown insects called "weavels," a kind of younger black-beetle. On the Line we were becalmed for several days within two or three miles of another vessel, and the poor men repeatedly craved permission to go and ask for bread. The captain, without positively refusing, displayed much reluctance to beg, so soon after leaving port. One evening we saw a well-manned boat sweeping over the glassy sea towards our ship; and forthwith a tall, sinewy, middle-aged sailor, in his shirt-sleeves, announced himself, in an accent richly American, as captain of the whaler "Sophie," of Bremen in Germany. He proved a shrewd, observant man, and was returning from a successful voyage to the South Seas. Our captain could not avoid asking him if he had any bread to spare: he said it was not good, but he had plenty of it, and would be happy to give us as much as we might want. Our captain promised to send for it. No sooner were the strangers gone than the men, doubtless informed by the steward of what had passed in the

cabin, asked if they might lower the boat. "No." They remonstrated; but in vain.

On gaining the north-east trade-wind, we daily sighted ships; but the captain would not hear of begging, and soon became wary even of speaking them; for one morning the captain of a trim barque, bound from Liverpool to Valparaiso, on hearing the name of our ship, cried, "What, the old ——, formerly of Whitby!" "Yes," replied our captain, little complimented. "Oh," rejoined the other, in a tone not to be mistaken, "I know her well!" We all (except perhaps the captain) echoed the words, "I know her well!" This daily refusal to obtain help when it was at hand made the men furious; they had no sugar, no pork, no grog, the little flour they got was damaged, and the stuff in the old bread-bags (for bread it was no longer) positively loathsome. Had "the owner" heard their remarks on his conduct, he would have shivered in his bed. It is gross iniquity, when men employing servants in duties sufficiently hazardous at the best, wantonly increase their danger by sending out worn-out ships on voyages for which only the strongest are fit; and add to the injury by starving them, when their complaints can reach only the ear of some man who has but one consideration, and that to be in favour with "his owner;" for such owners can obtain only such captains. Unquestionably among English ship-owners the cases are rare; but there are individuals who make a fortune by buying superannuated vessels, sending them on long voyages, employing captains of little character, and making them save from the just provisions of men and passengers every farthing that brazen dishonesty can screw. Day

after day, as the men looked on the ships passing, they would say, "They are not pumping and fasting there;" and add their opinion of their owner, suggesting a motto to be placed over his door.* The condition of the rigging was deplorable, and we had no sail-maker; neither had we any more canvas: a bad sail was mended by cutting up a worse one; twine to sew them was obtained by ripping up the sleeping cot of the late captain's daughter; and in default of pitch to make the twine work, I melted my candles, which produced tolerable wax.† The leeward pump became useless: we had no carpenter to repair it, and neither leather nor pump-nails, should the valves of the other fail. One day the captain told me that he had found two feet of water in the fore-hold. Soon afterwards a brisk gale opened on us suddenly, one night after sunset: our masts were in little danger, for the sails split before the halyards could be let go. As the men had just double-reefed the topsail, it split again under the reef: they were few, the wind gusty, the rain violent, and the pitching heavy; consequently they were long in making "ail snug." In the meantime it was necessary to look to the pump, a duty which was undertaken by the steerage passenger and myself, occasionally assisted by the cook and steward. We worked hard, in short, but frequent, "spells," the pump-water gushing on our feet, the rain pouring from above, and a wave every now and then adding a copious spray: overhead the impatient shouts

* Whether original or not, I cannot say; but it was so often repeated that I remember it well:—

"Hard work and sore abuse,
Kept here for sailors' use."

† We never set a royal during the voyage!

of the sailors struggling against the wind and rain sounded wildly in the storm. The next day the captain looked very grave, and, observing that she was making more water, hinted that he thought of putting into the Western Isles. We proceeded for a day or two: the pumping became almost ceaseless, and at length the captain said she was making twelve inches per hour, while the first mate said twenty. The men clamoured to lighten the ship: the captain threw overboard two or three casks of water! I asked him if he still intended to put into the islands. "No, sir." At length they discovered in the forecastle an aperture through which a large quantity of water was entering, and by cutting away one of the timbers, succeeded in so caulking it, that the leakage was considerably reduced. The next day the men learned that there was flour only for another day; and they firmly demanded that the ship should be carried into some port in the Isles, the second mate joining them. The captain refused: they insisted that they were not able to work the pump. "I can't help it." They urged him: he became furious, raised his hand, and shouted, "You may let her go to the bottom if you like; but as to putting back, I won't put back; no, not if God Almighty were to come out of the grave and order me!" The men were cowed, they slunk back one by one, scowling and muttering; and the captain, intimidated in his turn by their appearance, softened his tone, and solemnly promised them that he would apply for provisions to the first ship with which he should meet. On the afternoon of the following day, two vessels came in sight at the same instant, the one ahead and the other astern. The one ahead

was bearing down upon us, and we were soon very near; but just as we were getting the boat ready to lower, the stranger "hauled his wind," and took a course we could not follow. "Ah!" they cried, "he sees we're parish rigged, and he doesn't want to have anything to do with us: he's a Yankee;" adding, what I hope is not true, that American ships are in the habit of avoiding vessels in distress. The wind was so slight, that they thought we could overtake the fugitive in the boat; but no sooner had we started than the boat proved more leaky than the ship: I was furnished with a large pot, and baled hard, but could not keep her from filling. The men insisted on proceeding, the captain would not; and with sorrowful countenances we were received again on board. It was now too late to hope that the other ship would come up before night; and we knew that if there were any wind she would be far beyond our reach in the morning, for nothing sailed so slowly as our own craft; but it became a perfect calm, and the men said, exultingly, "We can sail as fast in a calm as she can."

The state of Dr. Boeke's health was now much worse than on leaving India; and, between sea-sickness, hard fare, and pumping, I was ill and weak. We both resolved, that if we could obtain places in the stranger, we would change ships. The captain had all along treated me with much personal civility, and I thought it only right to inform him of my design, though the doctor, who had been differently treated, feared to do so. My communication was received with manifest chagrin; but he acknowledged that he was not surprised, and promised to interpose no difficulty. The

whole night and part of the morning being calm, our neighbour did not approach till after breakfast. The day before, the steward had announced, at the top of his voice, that he had found "another shot in the locker," this consisted in a small bag of paddy which had been shipped to feed fowls; but which (failing fowls to be fed) had remained unused. This "paddy" was light, bad rice in the husks; not very dainty, it is true; but we were in no case to be dainty; and, therefore, I breakfasted on the paddy. The captain soon displayed a disposition to evade his promise: after looking at the stranger through his glass, he said, "That's a Frenchman: there's no use in boarding him." After a while he said, "He is outward bound: we could not reach him." I had heard expressions among the men that satisfied me they were prepared for some very resolute step, if they found themselves deceived; and therefore I reasoned with the captain, urging him to board. He doggedly refused: the men were leaning on the bulwarks, casting alternate looks at the strange ship and at their master; one of them came aft, and asked if he were going to board. He replied, "She is outward bound." "We have been too long at sea for that, sir," said the man, with a look that reminded me that I had heard them say the day before, "So and so knows enough of navigation to find a port." I again urged upon the captain to board; but he was inexorable. It was an anxious moment: before another hour we might have mutiny and bloodshed:—I went into my cabin, and closed my door. On returning to the deck, the ship was still to windward of us, the men with the same looks, and the captain pacing the decks ill at ease.

I at once joined him, and besought him to board: he persisted in the absurd subterfuge that she was outward-bound. I had been careful not to let the men hear my conversation with the captain; but seeing their eyes fixed on us, and fearing that they would take the matter into their own hands, I reiterated my request. The doctor, who was within hearing, finding that I did not prevail, lost the patience he had kept so long, and striking the poop-rail with his hand, said, in the hearing of all, "I declare, as a medical man, there is not food in this ship fit for a human being to eat; the stuff the men are using would not be wholesome for pigs; and I will not answer for our lives, if we do not get proper food." The captain flew into a rage; further restraint was useless; and, adding my protest to the doctor's, I said, that my health and life were in danger, and that, as a passenger, I demanded that food be obtained if it could. The captain refused, stormed, paced the decks, went below, returned, and said to the man at the wheel, "Bear away," and to another, "Bring the ensign." These words changed the looks of all: in a moment the helm was hard-up, the sails trimmed close upon the wind, and we were bearing down to intercept the stranger. "Shall we hoist the ensign with the union down?" (the signal of distress,) asked some of the men; but this was not allowed. We had not been long in our altered course, when the boat, which had been well seasoned by the soaking of the preceding night, was ordered to be lowered. Before we started, the doctor charged me to secure him a place at all risks, saying, "If she is going to Algiers, I'll go in her; and if they have no place but the deck, I'll

take it." Just as I got into the boat, a sailor said, "This is a trick, sir; that ship is three miles off, he thinks we can never make her; but we'll try." After a long pull, the captain said, "Now you see that ship is gaining on us: you can never make her." "Ay, ay, sir," replied the men, "we understand that; but anything for life, and anything for grub, sir: we'll try." They stretched to the oar with desperate energy, the boat shot over the long round waves, and the captain succumbed to the resolution of hungry men. The pull was long, and the success doubtful; for we could not but see that both ships were going ahead of us. The red English ensign was waving over the stranger: this gave the men new strength; they pulled, perspired, and panted. At length she hove too: we soon read on her stern, "British Isles, London," and in another moment were on the deck, where we were received by the captain and a group of passengers. "Well," said the captain, with good-tempered displeasure, "you may thank my black boy that you were not left in the sea; for I never dreamed of people putting out a boat at that distance: the boy went aloft about something, and cried out that he saw a large black fish; I went up with my glass, and was astounded to find it was a boat; you were out of sight of your own ship;" (this, we afterwards learned, was correct;) "and had it not been for that boy, you would have been left behind." Our commander evidently felt little flattered by this speech. "Well," continued the other, "I see you are in distress: do you want water?" "No." That was true. "Do you want pork?" "No." There had not been a morsel on board for some time. "Do you

want beef?" "No." The last cask had been serving all hands for ten days. "Then what do you want? Do you want bread?" "Yes, a little bread." "Much?" "No; only a few pounds." This was immediately ordered, and I asked to speak with the captain. "Have you got a cabin to spare?" "No, my cabins are all engaged." "Can you make no arrangement to receive two passengers?" "Why, I never knew such a thing as passengers changing ships on the high seas;" and, looking very suspicious, "Why do you want to change?" "I assure you we have sufficient reason; but there is not time to explain now: if you fear that we should prove troublesome, we willingly refer you to the captain, whom we wish to leave." Still he declined. I again assured him that our reasons for changing were solely on the score of health and safety, adding, "I am a Wesleyan missionary." "Oh," he replied, "that's enough, I know what kind of gentlemen they are; I have no fear of trouble from you: there is a cabin which the steward has been using." He showed me a very neat cabin with double berth, with which I was abundantly satisfied: he then inquired as to my companion; and on learning that he was a gentleman, and of unexceptionable character, he said, "Well. I will just name the matter to the passengers." They readily agreed to increase their party; and the good captain, on being requested to state terms, named a very moderate sum. I stayed below to write a letter, in case the old ship should first come to land. On reaching the deck I found the two ships close together. "Why, bless you," said Captain Muirhead, of the "British Isles," to his neighbour, "those sails will never carry

you to England." "I have got a better suit below!" With a large bag of bread, some pump-nails and leather, we returned to the wretched-looking old ship. The men were glad to see the bread, and the doctor overjoyed to find that, instead of a deck-passage to Algiers, or longer imprisonment in the ——, he had a place secured for London in a good ship. We hastily put a few articles into the boat, the captain was egregiously civil, the men surrounded us, and I took leave of them with blessings and prayers, which they heartily returned. I was most grieved to leave the poor children and the steerage passenger on board; but I could not interfere to remove them, and there was one comfort, that they would have so much the better fare for our absence; for the captain did not know that the doctor was going to leave till after he had ordered his "few pounds" of bread. No sooner were we on board our new ship, which was from Demerara, than the passengers surrounded us to hear our tale: whilst we were reciting it, the steward came up and cried, "Lunch." That was a strange word to us, but not at all unwelcome. I shall not easily forget the doctor's joy on seeing upon the cabin-table a bread-basket filled with nice white bread; nor is it to be denied, that, after my breakfast of paddy, I thought it a very pleasant sight. Captain Muirhead proved a kind and able commander, the passengers agreeable, the table all that could be desired, and the "British Isles" a right good ship. The doctor's health immediately began to improve, and our convalescence was mutual.

In less than a fortnight, on the morning of September 26th, from the cabin-window, I saw a high cliff crowned

by Dover Castle. We were lying-to for a pilot: and before midnight we moored abreast the entrance to the West India Docks. The care of God had been conspicuous throughout the voyage; its close was crowned with mercies; and as, looking round on the flashing lights of London, I felt that all its dangers were past, and the desired harbour gained, my whole soul was moved to thanksgiving. Kneeling down to utter those thanksgivings, the recollection came, that the separation from my mission was now consummated: even in the joy of that moment the reflection brought a pang, which led to a solemn renewal of the resolution, that, live where I might, the best of my strength should be devoted to the interests of India.

I.

A NARRATIVE OF THE WESLEYAN MISSION TO JAMAICA, with Occasional Remarks on the State of Society in that Colony. By the Rev. PETER DUNCAN, formerly a Missionary in that Island. Crown 8vo, cloth, 7*s.* 6*d.*

"A tale which opens before us the progress of one of the most notable triumphs of the work of God. Mr. Duncan has two merits, for which all Missionary literature has not been remarkable—brevity and modesty. He understands his subject, is sure of his ground, writes straight forward, leads you with him, and whenever you stop to breathe you feel that you have been making a very interesting and instructive journey."—CHRISTIAN MISCELLANY.

II.

HELEN; or the Infant Prisoner of War. A Narrative. By ANNA MARIA. Fcap. 8vo, cloth, 2*s.* 6*d.* Crimson, 3*s.*

"An admirably-told tale. The incidents are natural and touching; while throughout the whole there runs a fine vein of religious thought and feeling. As a present for youth, its claims are second to none of its class."—CHRISTIAN TIMES.

III.

VOICES FROM THE GARDEN; or, the Christian Language of Flowers. Crown 8vo, 1*s.*

IV.

IMPORTANT TRUTHS IN SIMPLE VERSE.—Second Thousand. 18mo. 1*s.* 6*d.* Crimson, 2*s.*

"Some of the more humorous pieces would entitle the writer to the degree of A.B. in Jane Taylor's College."—BAPTIST MAGAZINE.

"Some of the compositions are, in our judgment, worthy to rank among the best that ever proceeded from the pen of either of those ingenious and useful writers, Dr. Watts or Jane Taylor."—BAPTIST MAGAZINE.

V.

RHYMES WORTH REMEMBERING. Price 6*d.*

"This little work is admirably suited to the tender and youthful mind. It is a moral and spiritual nosegay, beaming with beauty, and exhaling the most refreshing fragrance."—SABBATH SCHOOL PREACHER.

VI.

THE COSSACKS OF THE UKRAINE; containing Biographical Notices of Mazeppa, Sava, Zelezsniak, Gonta; a Memoir of Princess Tarakanof; Particulars respecting Catherine II. of Russia, and her Favourites, &c. By Count HENRY KRASINSKI, author of "The Poles in the Seventeenth Century," &c. Crown 8vo, cloth, 10*s.* 6*d.*

VII.

A CHRONOLOGICAL AND HISTORICAL ATLAS OF THE MIDDLE AGES; compiled for the Use of Schools. By Professor G. MASSON, B.A., Univ. Gallic. Folio, 16*s.* cloth.

VIII.

EXPLANATORY NOTES AND COMMENTS ON THE NEW TESTAMENT. By EDWARD ASH, M.D. Three vols. crown 8vo, £1 1*s.*

"A very solid and meritorious production, with the rare merit of saying much in the least possible compass. We decidedly prefer it to the volume of Barnes on the same important department of Revelation."—UNITED PRESBYTERIAN MAG.

IX.

SCRIPTURAL VIEWS OF THE SABBATH OF GOD. By the Rev. J. JORDAN, B.A., Enstone, Oxon. Fcap. 8vo, cloth, 4*s.*

"One of the best books on the Sabbath question which the controversy has produced."—EDINBURGH WITNESS.

X.

MATTHEW HENRY'S COMMENTARY; Pictorial Unabridged Edition, with copious Supplementary Notes, Epistles Revised, 740 Wood Cuts, Maps, and Engraved Titles. Complete in three quarto vols., cloth, £2 13*s.*; half-calf, £3 10*s*; calf, £3 17*s.* 6*d.*

XI.

THE DOMESTIC BIBLE. By the Rev. I. COBBIN, M.A. With Expository Notes—Practical Reflections—Marginal References—Improved Beadings—A corrected Chronological Order—Questions for Family Examination, and copious Indexes. In one thick 4to volume, with 700 Wood Engravings, &c., cloth, £1 8*s.*

XII.

MEMOIRS OF THE LIFE AND LABOURS OF THE REV. ADAM AVERELL, for nearly thirty years President of the Primitive Wesleyan Methodist Conference. By ALEX. STEWART and GEO. REVINGTON. Price 7*s.* 6*d.*

"The memoir of no ordinary man. The scene of his labours—the vigour of his character—the incidents of his life—the depth of his piety—and the measure of his success, invest the work with great interest, and will, I trust, by God's blessing, render it extensively useful."—REV. J. A. JAMES.
